You may be upset about the too many questions in your FCSS_SASE_AD-24 test preview. Now, you will clear your worries. Our FCSS_SASE_AD-24 test engine can allow unlimited practice your exam. With the options to highlight the missed questions, you can know your mistakes in your FCSS_SASE_AD-24 test training, then, you can practice with purpose. If you want to have 100% confidence, you can practice until you get right. Besides, you can do marks where possible, so as to review and remember next time. Through effort and practice, you can get high scores in your Fortinet FCSS_SASE_AD-24 real test.

Fortinet FCSS_SASE_AD-24 Exam Syllabus Topics:

Topic	Details
Topic 1	• SASE Deployment: This domain assesses the capabilities of Cloud Security Architects in deploying SASE solutions. It includes implementing various user onboarding methods, configuring administration settings, and applying security posture checks and compliance rules to ensure a secure environment.
Topic 2	• SIA, SSA, and SPA" This section focuses on the skills of Security Administrators in designing security profiles for content inspection and deploying SD-WAN and Zero Trust Network Access (ZTNA) using SASE. Understanding these concepts is crucial for securing access to applications and data across the network.
Topic 3	• SASE Architecture and Components: This section measures the skills of Network Security Engineers and covers the architecture and components of FortiSASE. It includes integrating FortiSASE into a hybrid network, identifying its components, and constructing deployment cases to effectively implement SASE solutions.
Topic 4	• Analytics: This domain evaluates the skills of Data Analysts in utilizing analytics within FortiSASE. It involves identifying potential security threats using traffic logs, configuring dashboards and logging settings, and analyzing reports for user traffic and security issues to enhance overall security posture.

FCSS_SASE_AD-24 Valid Dumps | Premium FCSS_SASE_AD-24 Exam

To do this you just need to enroll in Fortinet FCSS_SASE_AD-24 exam and strive hard to pass the FCSS - FortiSASE 24 Administrator (FCSS_SASE_AD-24) exam with good scores. However, you should keep in mind that the Fortinet FCSS_SASE_AD-24 certification exam is different from the traditional exam and always gives enough time to their candidates. But with proper FCSS - FortiSASE 24 Administrator (FCSS_SASE_AD-24) exam preparation, planning, and firm commitment can enable you to pass the challenging FCSS - FortiSASE 24 Administrator (FCSS_SASE_AD-24) exam.

Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which settings are essential for securing device compliance in FortiSASE?

(Select all that apply)

Response:

- A. Configuring firewall rules on endpoints
- B. Allowing guest access to secure resources
- C. Enforcing regular software updates
- D. Limiting access based on device type

Answer: A,C,D

NEW QUESTION # 38

When viewing the daily summary report generated by FortiSASE, the administrator notices that the report contains very little data. What is a possible explanation for this almost empty report?

- A. Digital experience monitoring is not configured.
- B. Log allowed traffic is set to Security Events for all policies.
- C. There are no security profile groups applied to all policies.
- D. The web filter security profile is not set to Monitor.

Answer: B

Explanation:

The issue of an almost empty daily summary report in FortiSASE can often be traced back to how logging is configured within the system. Specifically, if "Log Allowed Traffic" is set to "Security Events" for all policies, it means that only security-related events (such as threats or anomalies) are being logged, while normal, allowed traffic is not being recorded. Since most traffic in a typical network environment is allowed, this configuration would result in very little data being captured and subsequently reported in the daily summary.

Here's a breakdown of why the other options are less likely to be the cause:

- * B. There are no security profile groups applied to all policies: While applying security profiles is important for comprehensive protection, their absence does not directly affect the volume of data in reports unless specific logging settings are also misconfigured.
- * C. The web filter security profile is not set to Monitor: This option pertains specifically to web filtering activities. Even if web filtering is not set to monitor mode, other types of traffic and logs should still populate the report.
- * D. Digital experience monitoring is not configured: Digital Experience Monitoring (DEM) focuses on user experience metrics rather than general traffic logging. Its absence would not lead to an almost empty report.

To resolve this issue, administrators should review the logging settings across all policies and ensure that "Log Allowed Traffic" is appropriately configured to capture the necessary data for reporting purposes.

NEW QUESTION # 39

A customer wants to upgrade their legacy on-premises proxy to a cloud-based proxy for a hybrid network. Which two FortiSASE features would help the customer achieve this outcome? (Choose two.)

- A. Inline-CASB
- B. Secure web gateway (SWG)

- C. Digital experience monitoring (DEM)
- D. Zero trust network access (ZTNA)

Answer: A,B

NEW QUESTION # 40

How does integrating endpoint detection and response (EDR) systems into SASE contribute to security posture?

Response:

- A. It provides real-time threat detection and response at endpoints
- B. It serves as the primary firewall
- C. It enhances user interface designs
- D. It isolates the network from the internet

Answer: A

NEW QUESTION # 41

A customer needs to implement device posture checks for their remote endpoints while accessing the protected server. They also want the TCP traffic between the remote endpoints and the protected servers to be processed by FortiGate.

In this scenario, which three setups will achieve the above requirements? (Choose three.)

- A. Sync ZTNA tags from FortiSASE to FortiGate.
- B. Configure private access policies on FortiSASE with ZTNA.
- C. Configure ZTNA tags on FortiGate.
- D. Configure ZTNA servers and ZTNA policies on FortiGate.
- E. Configure FortiGate as a zero trust network access (ZTNA) access proxy.

Answer: C,D,E

Explanation:

To meet the requirements of implementing device posture checks for remote endpoints and ensuring that TCP traffic between the endpoints and protected servers is processed by FortiGate, the following three setups are necessary:

Configure ZTNA tags on FortiGate (Option A):

ZTNA (Zero Trust Network Access) tags are used to define access control policies based on the security posture of devices. By configuring ZTNA tags on FortiGate, administrators can enforce granular access controls, ensuring that only compliant devices can access protected resources.

Configure FortiGate as a zero trust network access (ZTNA) access proxy (Option B):

FortiGate can act as a ZTNA access proxy, which allows it to mediate and secure connections between remote endpoints and protected servers. This setup ensures that all TCP traffic passes through FortiGate, enabling inspection and enforcement of security policies.

Configure ZTNA servers and ZTNA policies on FortiGate (Option C):

To enable ZTNA functionality, administrators must define ZTNA servers (the protected resources) and create ZTNA policies on FortiGate. These policies determine how traffic is routed, inspected, and controlled based on device posture and user identity.

NEW QUESTION # 42

.....

More and more people look forward to getting the FCSS_SASE_AD-24 certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the FCSS_SASE_AD-24 related certification. If you want to get the related certification in an efficient method, please choose the FCSS_SASE_AD-24 study materials from our company.
