Our App online version of NSE5_FSM-6.3 study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the NSE5_FSM-6.3 simulating materials of this learning model, users only need to open the App link, you can quickly open the learning content in real time in the ways of the NSE5_FSM-6.3 Exam Guide, can let users anytime, anywhere learning through our App, greatly improving the use value of our NSE5_FSM-6.3 exam prep.

Fortinet NSE5_FSM-6.3 exam covers various topics related to FortiSIEM deployment, configuration, administration, and troubleshooting. These topics include understanding FortiSIEM architecture, configuring data sources, creating and managing policies, generating reports, and using advanced features such as correlation rules, event enrichment, and machine learning. Passing the Fortinet NSE5_FSM-6.3 Exam demonstrates that a network security professional has the skills and knowledge required to deploy and manage FortiSIEM solutions effectively, which is essential for protecting an organization's IT infrastructure from cyber threats.

The software version is one of the three versions of our NSE5_FSM-6.3 exam prep. The software version has many functions which are different with other versions'. On the one hand, the software version of NSE5_FSM-6.3 test questions can simulate the real examination for all users. By actually simulating the test environment, you will have the opportunity to learn and correct self-shortcoming in study course. On the other hand, although you can just apply the software version of NSE5_FSM-6.3 training guide in the windows operation system.

Fortinet NSE 5 - FortiSIEM 6.3 Sample Questions (Q48-Q53):

NEW QUESTION # 48

How is a subpattern for a rule defined?

- A. Filters, Aggregation, Time Window definitions
- B. Filters, Group By definitions, Threshold
- C. Filters, Aggregation, Group by definitions
- D. Filters, Threshold, Time Window definitions

Answer: C

NEW QUESTION # 49
When configuring collectors located in geographically separated sites, what ports must be open on a front end firewall?

- A. HTTPS, from the collector to the worker upload settings address only
- B. HTTPS,from the Internet to the collector
- C. HTTPS, from the collector to the supervisor and worker upload settings addresses
- D. HTTPS, from the Internet to the collector and from the collector to the FortiSIEM cluster

Answer: C

Explanation:
FortiSIEM Architecture: In FortiSIEM, collectors gather data from various sources and send this data to supervisors and workers within the FortiSIEM architecture.
Communication Requirements: For collectors to effectively send data to the FortiSIEM system, specific communication channels must be open.
Port Usage: The primary port used for secure communication between the collectors and the FortiSIEM infrastructure is HTTPS (port 443).
Network Configuration: When configuring collectors in geographically separated sites, the HTTPS port must be open for the collectors to communicate with both the supervisor and the worker upload settings addresses.
This ensures that the collected data can be securely transmitted to the appropriate processing and analysis components.
References: FortiSIEM 6.3 Administration Guide, Network Ports section details the necessary ports for communication within the FortiSIEM architecture.

NEW QUESTION # 50
Refer to the exhibit.

```
[root@FSM_NSE5 bin]#./phLicenseTool --collect license_req.dat
[PH_GENERIC_DEBUG]:[eventSeverity]=LM_DEBUG,[procName]=<unknown>,[fileName]=phMiscUtils.cpp,
[lineNumber]=992,[phLogDetail]=Interface eth0 IP = 192.168.69.109
License information collected to the output file: license_req.dat
```

An administrator is investigating a FortiSIEM license issue.
The procedure is for which offline licensing condition?

- A. The procedure is for offline license debug.
- B. The procedure is for offline license validation.
- C. The procedure is for offline license registration.
- D. The procedure is for offline license verification.

Answer: C

Explanation:
Offline Licensing in FortiSIEM: FortiSIEM provides mechanisms for offline licensing to accommodate environments without direct internet access.
License Tool Command: The command./phLicenseTool --collect license_req.datis used to collect license information necessary for offline registration.
Procedure Analysis: The exhibit shows the output of this command, which indicates the collection of license information to a file namedlicense_req.dat.
Offline License Registration: This collected data file is then typically uploaded to the FortiSIEM support portal or provided to the FortiSIEM support team for processing and generating a license file.
References: FortiSIEM 6.3 Administration Guide, Licensing section, details the procedures for both online and offline license

registration, including the use of thephLicenseToolfor offline scenarios.

NEW QUESTION # 51
If a performance rule is triggered repeatedly due to high CPU use, what occurs in the incident table?

- A. A new incident is created based on the Rule Frequency value, and the First Seen and Last Seen times ate updated.
- B. The Incident Count value increases, and the First Seen and Last Seen times update.
- C. A now incident is created each time the rule is triggered. and the First Seen and Last Seen times are updated.
- D. The incident status changes to Repeated, and the First Seen and Last Seen times are updated.

Answer: B

Explanation:
Incident Management in FortiSIEM: FortiSIEM tracks incidents and their occurrences to help administrators manage and respond to recurring issues.
Performance Rule Triggering: When a performance rule, such as one for high CPU usage, is repeatedly triggered, FortiSIEM updates the corresponding incident rather than creating a new one each time.
Incident Table Updates:
* Incident Count: The Incident Count value increases each time the rule is triggered, indicating how many times the incident has occurred.
* First Seen and Last Seen Times: These timestamps are updated to reflect the first occurrence and the most recent occurrence of the incident.
References: FortiSIEM 6.3 User Guide, Incident Management section, explains how FortiSIEM handles recurring incidents and updates the incident table accordingly.

NEW QUESTION # 52
In FortiSIEM enterprise licensing mode, it the link between the collector and data center FortiSIEM cluster is down, what happens?

- A. The collector buffers events
- B. The collector processes stop, and events ate dropped.
- C. The collector continues performance collection of devices, but slops receiving syslog.
- D. The collector drops incoming events like syslog. but stops performance collection.

Answer: C

Explanation:
Enterprise Licensing Mode: In FortiSIEM enterprise licensing mode, collectors are deployed in remote sites to gather and forward data to the central FortiSIEM cluster located in the data center.
Collector Functionality: Collectors are responsible for receiving logs, events (e.g., syslog), and performance metrics from devices.
Link Down Scenario: When the link between the collector and the FortiSIEM cluster is down, the collector needs a mechanism to ensure no data is lost during the disconnection.
Event Buffering: The collector buffers the events locally until the connection is restored, ensuring that no incoming events are lost. This buffered data is then forwarded to the FortiSIEM cluster once the link is re- established.
References: FortiSIEM 6.3 User Guide, Data Collection and Buffering section, explains the behavior of collectors during network disruptions.
