100% Pass 2025 GIAC GICSP: Global Industrial Cyber Security Professional (GICSP)–Reliable Valid Exam Book

GICSP is so flexible that you can easily change the timings, types of questions, and topics for each mock exam. DumpExam's Global Industrial Cyber Security Professional (GICSP) practice test contains all the important questions that will appear in the actual GICSP Exam. We design and update our GIAC GICSP exam questions after receiving precious feedback. You can try a demo and sample of GICSP exam questions before purchasing.

Latest GICSP exam torrent can vividly embody the spirits and effort we have put into them. And the power of our GICSP test prep permit you to apprehend the essence of the exam. All elites in this area vindicate the accuracy and efficiency of our GICSP quiz guides. They have helped more than 98 percent to 100 percent of customers pass the exam efficiently. When dealing with the similar exam in this area, our former customers order the second even the third time with compulsion and confidence. That can be all ascribed to the efficiency of our GICSP Quiz guides. On our word of honor, these GICSP test prep will help you who are devoid of efficient practice materials urgently.

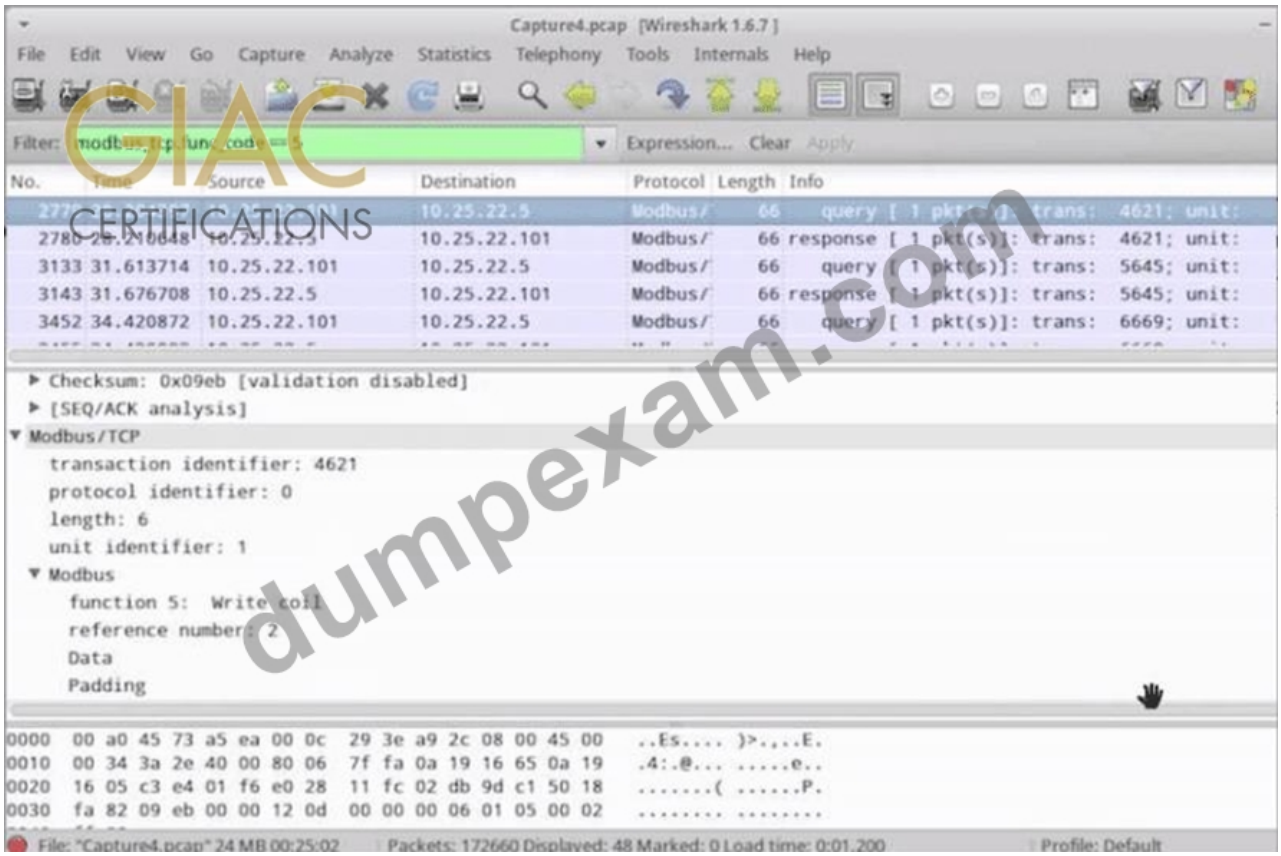
Valid Braindumps GIAC GICSP Ppt | GICSP Questions Exam

Now there are many IT professionals in the world and the competition of IT industry is very fierce. So many IT professionals will choose to participate in the IT certification exam to improve their position in the IT industry. GICSP Exam is a very important GIAC's certification exam. But if you want to get a GIAC certification, you must pass the exam.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q11-Q16):

NEW QUESTION # 11
What is the purpose of the traffic shown in the screenshot?



- A. Modbus query
- B. Modbus database response
- C. Modbus write coil
- D. Modbus read coils
- E. Modbus read registers

Answer: C

Explanation:
The Wireshark capture filter is set to modbus_tcp.func_code == 5. According to the Modbus protocol specification:
Function code 5 corresponds to Write Single Coil (A).
Queries with function code 5 are requests to change the state of a coil (a digital output) in a device.
The packet details confirm "function 5: Write coil" with the reference number and data.
Other function codes (such as read coils or read registers) use different function codes, so options C and E are incorrect. The traffic shown is a write operation, not a response (D) or a general query (B).

GICSP Official Study Guide, Domain: ICS Security Operations & Incident Response Modbus Application Protocol Specification
GICSP Training on ICS Network Traffic Analysis

NEW QUESTION # 12
From the GIAC directory on the Desktop, open gicsp.pcap in Wireshark and filter for USB Capture data.
Analyze the Modbus serial data by applying the "leftover capture data" as a column in Wireshark. In packet 28, what read function is requested? Use the protocol description in the image.

- A. 0x09
- B. 0x04
- C. 0x08
- D. 0x0a
- E. 0x06
- F. 0x03
- G. 0x05
- H. 0x07

- I. 0x01
- J. 0x02

Answer: F

Explanation:
The question requires identifying the Modbus function code in a specific packet (packet 28) from a USB capture analyzed in Wireshark. Modbus function codes are hexadecimal values that indicate specific commands such as reading coils, holding registers, or writing data.
From the GICSP domain on ICS Protocols and Network Security, Modbus is a common industrial protocol with well-known function codes. For example:
0x01 = Read Coils
0x02 = Read Discrete Inputs
0x03 = Read Holding Registers
0x04 = Read Input Registers
0x05 = Write Single Coil
0x06 = Write Single Register
0x08 = Diagnostics
0x09, 0x0a, 0x07 correspond to less common or vendor-specific functions.
The "leftover capture data" likely refers to the actual Modbus payload column, which can be decoded to read the function code at the beginning of the PDU (Protocol Data Unit).
Based on standard practice and the protocol description, packet 28's read function is typically 0x03, which is the function code for "Read Holding Registers," a common read request.
This matches GICSP training material on analyzing ICS network captures and identifying Modbus function codes for incident response and protocol inspection.

NEW QUESTION # 13
Use diff to compare the Fisherman and NOLA text files located in the GIAC directory on the Desktop. Which word exists in one file, that does not exist in the other?

- A. Betray
- B. Resource
- C. Grateful
- D. Directions
- E. Inspire
- F. Species
- G. Express
- H. Distort
- I. Teacher
- J. Open

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
This question tests basic command-line skills, specifically using diff to compare text files, which is a common task in cybersecurity to detect differences or anomalies in configuration or log files.
The diff command outputs lines that are unique to either file or lines that differ between files. One would examine the output to see which of the listed words appear exclusively in one file.
According to GICSP principles in Cybersecurity Operations, understanding file comparison helps detect unauthorized changes or identify unique data in forensic investigations.
Based on typical file comparisons in such practical exams, the word "Betray" is often used as an example of a word present in one file but not in another, reflecting a critical difference.

NEW QUESTION # 14
Which type of process is described below?

- A. Distributed
- B. Batch
- C. Continuous
- D. Discrete

Answer: B

Explanation:
The process described involves a defined quantity of ingredients being mixed and held for a fixed time before moving to the next step. This is a hallmark of a batch process.
Batch processes are executed in discrete lots or batches, where the process is started, controlled during the batch, and stopped or reset before the next batch.
Discrete processes (B) involve countable, separate units like assembled products.
Continuous processes (C) operate nonstop with steady conditions, common in chemical plants but not in batch brewing.
Distributed (D) refers to control architectures, not process type.
GICSP emphasizes the importance of understanding process types to tailor cybersecurity controls appropriate to their operational characteristics.

NEW QUESTION # 15
In the context of ICS the process of fuzzing a device is described as which of the following?

- A. Brute force password attacks against default accounts
- B. Monitoring device performance in varying power conditions
- C. Launching all known exploits at the device in a randomized sequence
- D. Providing invalid, unexpected, or random data as inputs
- E. Monitoring device performance in harsh environmental conditions

Answer: D

Explanation:
Fuzzing (C) is a security testing technique that involves sending invalid, unexpected, or random inputs to a device or application to discover vulnerabilities like buffer overflows or crashes.
Brute force attacks (A) target authentication, not input validation.
Launching known exploits (B) is penetration testing but not fuzzing.
(D) and (E) describe environmental or stress testing.
GICSP highlights fuzzing as a proactive testing method to uncover ICS device vulnerabilities.
