ITFAS-Level-1 Valid Exam Sample & Latest ITFAS-Level-1 Test Sample

Managing time during the NICET ITFAS-Level-1 exam is a challenging task. Most candidates cannot manage their time during the NICET ITFAS-Level-1 exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the ITFAS-Level-1 Exam. NICET ITFAS-Level-1 practice exam on the software helps you identify which kind of Inspection and Testing of Fire Alarm Systems Level I Exam ITFAS-Level-1 questions are more time-consuming, and they would be able to assess their efficiency in answering questions.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

How is a projected beam detector inspected?

- A. Use an optical filter
- B. Check for obstruction
- C. Remote test switch
- D. Introduce smoke

Answer: B

Explanation:

For inspection purposes (not testing), projected beam detectors are visually checked for obstructions, alignment issues, and cleanliness of lenses.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

"Projected beam smoke detectors" # Inspect quarterly

Method: Check for obstruction, alignment, cleanliness

Testing uses an optical filter, but inspection is visual.

Correct answer: A. Check for obstruction

NEW QUESTION # 48

How often does a technician test the manual operation of a master box on a public emergency alarm reporting system?

- **A. Annually**
- B. Semiannually
- C. Quarterly
- D. Monthly

Answer: A

Explanation:

A master box is a type of manual fire alarm box connected directly to a public emergency reporting system (typically a municipal or fire department network). NFPA 72 requires these to be tested annually to ensure they still properly send signals to the public system.

NFPA 72 (2022), Table 14.4.3.2 - Inspection, Testing, and Maintenance Frequencies:

Under Public Emergency Alarm Reporting Systems # Master Boxes:

Test Frequency: Annually

Method: "Manual operation and verification of signal receipt at the public communication center." The test confirms the box functions mechanically and that the signal is received by the appropriate monitoring point (e.g., fire department dispatch).

Correct answer: D. Annually

NEW QUESTION # 49

Notification appliances in a fire alarm system produce a distinctive evacuation signal that does which of the following?

- A. Alternates on for 1 second, off for 1.5 seconds
- B. Provides a 4-pulse temporal pattern
- **C. Provides a 3-pulse temporal pattern**
- D. Alternates on for 1 second, off for 1 second

Answer: C

Explanation:

NFPA 72 mandates a standardized evacuation signal pattern to ensure building occupants can recognize and respond to an emergency.

NFPA 72 (2022), Section 18.4.2.1:

"Where audible appliances are used for evacuation or relocation, the alarm signal shall be the Temporal- Three Evacuation Signal pattern (three short audible signals followed by a pause)." This pattern is commonly known as the Temporal-3 or T-3 signal.

Correct answer: C. Provides a 3-pulse temporal pattern

NEW QUESTION # 50

An inspector has been given a list of 45 devices and 1 fire alarm control unit that needs to be inspected at a job site. The inspector knows it takes on average about 2 minutes to inspect 1 device with documentation. Also, the inspector knows it takes 20 minutes to perform the required tests on the fire alarm control unit and get the system restored.

How long does the inspector tell the owner that the fire alarm system is expected to be impaired?

- **A. 1 hour, 50 minutes**
- B. 1 hour, 5 minutes
- C. 1 hour, 10 minutes

- D. 1 hour, 30 minutes

Answer: A

Explanation:

This question focuses on estimating system impairment time, which is a key planning function when coordinating fire alarm inspections.

Step-by-step breakdown:

* 45 devices × 2 minutes = 90 minutes

* FACU testing and restoration = 20 minutes

* Total = 90 + 20 = 110 minutes

* 110 minutes = 1 hour and 50 minutes

While NFPA 72 doesn't specify how to calculate impairment time, NICET expects Level I technicians to plan and communicate system impairments accurately - part of their responsibilities under:

NICET Level I Content Outline - Domain: Plan and Coordinate Work

"Estimate and communicate the time required to perform inspection and testing tasks while minimizing system impairments."

Therefore, the correct choice is:

D: 1 hour, 50 minutes

NEW QUESTION # 51

When testing initiating devices, what is the maximum allowed time for the supervising station to verify receipt of the signal?

- A. 120 seconds
- B. 60 seconds
- C. 80 seconds
- **D. 90 seconds**

Answer: D

Explanation:

NFPA 72 sets a maximum time limit for verifying that signals from initiating devices reach the supervising station during testing. The purpose is to ensure that communication paths and processing do not introduce unsafe delays.

NFPA 72 (2022), Section 14.4.3.4.2:

"Where connected to a supervising station, the signal shall be confirmed as received at the supervising station within 90 seconds of initiating device activation." Correct answer: C. 90 seconds

NEW QUESTION # 52

.....

Our NICET ITFAS-Level-1 practice materials are suitable to exam candidates of different levels. And after using our ITFAS-Level-1 learning prep, they all have marked change in personal capacity to deal with the NICET ITFAS-Level-1 Exam intellectually. The world is full of chicanery, but we are honest and professional in this area over ten years.

ITFAS-Level-1 Valid Exam Sample: <https://www.freecram.com/NICET-certification/ITFAS-Level-1-exam-dumps.html>

Our ITFAS-Level-1 simulating exam' global system of privacy protection standards has reached the world's leading position, According to the worldwide recognition about NICET ITFAS-Level-1 Valid Exam Sample exams, a person will get an admirable and well-paid job in the world if he passes the exam ITFAS-Level-1 Valid Exam Sample - Inspection and Testing of Fire Alarm Systems Level I Exam pdf study torrent and obtains a good certification, NICET ITFAS-Level-1 Practice Test Online What a wonderful thing.
