IT technology skills are universal, once you get a Microsoft certification (GH-900 Test Dumps files), you can have an outstanding advantage while applying for a job no matter where you are.

Microsoft GitHub Foundations Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which of the following information is available by default in a user's GitHub profile?

- **A. Personal biography and profile picture**
- B. Email address and password
- C. A list of the user's private repositories
- D. Public Secure Shell Protocol (SSH) keys

Answer: A

Explanation:

A user's GitHub profile typically includes public information such as a personal biography, profile picture, and a list of public repositories. More sensitive information, like email addresses and passwords, is not publicly displayed.

Personal Biography and Profile Picture:

Option A is correct because these are standard elements displayed on a user's public GitHub profile. This information is meant to provide a brief introduction to the user and their interests or skills.

Incorrect Options:

Option B is incorrect because public SSH keys may be associated with a user's account but are not displayed by default on the profile page.

Option C is incorrect because private repositories are not listed on a public profile.

Option D is incorrect because a user's email address and password are private information and not displayed on their public profile.

GitHub Docs: Managing Your Profile

NEW QUESTION # 50

Which of the following is an Innersource development practice?

- A. Adopting open source code into the organization
- **B. Sharing code between teams within the organization**
- C. Removing open source code from the organization
- D. Making all repositories publicly accessible

Answer: B

Explanation:

Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.

Sharing Code Between Teams:

Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.

Incorrect Options:

Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.

Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.

Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.

NEW QUESTION # 51

Which of the following GitHub syntax formats is consistent with the associated text?

- A. * This is a heading
- B. This is bolded text
- C. <!-- This is a comment -->
- D. This is a link
- E. 1. This is an ordered list

Answer: C

Explanation:

GitHub supports various syntax formats that align with Markdown and HTML conventions. Here's a breakdown of the provided options:

Comment Syntax:

Option C is correct. The syntax <!-- This is a comment --> is used in Markdown files to insert comments. These comments will not be rendered in the final output, making them useful for adding notes or instructions within the code or documentation.

Incorrect Options:

Option A (* This is a heading) is incorrect because an asterisk (*) denotes an unordered list item, not a heading. A heading in Markdown is typically created with one or more hash symbols (#).

Option B (This is a link) is incorrect because this is plain text and not the syntax for creating a link. The correct syntax would be [This is a link](URL).

Option D (This is bolded text) is incorrect because this is plain text, not the correct Markdown syntax for bold text, which should be ****This is bolded text**** or **__This is bolded text__**.

Option E (1. This is an ordered list) is incorrect as it does represent an ordered list item, but it was not the syntax format asked about in the question. The question specifically focuses on matching associated text with syntax, where only the comment option is correct.

NEW QUESTION # 52

How can a user create a repository template, and what permissions are required?

- A. With Maintain permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- B. With Admin permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- C. With Admin permissions, navigate to Repository settings and select Template Repository.
- D. With Maintain permissions, navigate to Repository settings and select Template Repository.

Answer: C

Explanation:

Creating a repository template in GitHub requires specific steps and permissions:

Creating a Repository Template:

Option A is correct because a user with Admin permissions can navigate to the repository's settings and enable the "Template Repository" option. This allows other users to generate new repositories from this template, which includes all branches, tags, and file history.

Other Options:

Option B is incorrect because "Maintain" permissions do not allow the creation of repository templates, and the option is not found in Organization settings but in the repository settings.

Option C is incorrect because the "Template Repository" option is in the repository settings, not in Organization settings.

Option D is incorrect because "Maintain" permissions do not grant the ability to create a repository template.

GitHub Docs: Creating a Template Repository

NEW QUESTION # 53

What folder is the definition files stored in when creating custom issue forms?

- A. .issues
- B. .GitHub
- C. .issues/ISSUE_TEMPLATE
- D. .github/ISSUE_TEMPLATE

Answer: D

Explanation:

When creating custom issue forms on GitHub, the definition files are stored in the .github/ISSUE_TEMPLATE folder. This directory is used to define issue templates and forms that help standardize the information collected when users open new issues in the repository. The .github folder is a special directory used for various repository configurations and workflows.
