High Hit Rate Hot Deep-Security-Professional Spot Questions for Real Exam

Due to busy routines, applicants of the Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) exam

need real Trend exam questions. When they don't study with updated Trend Deep-Security-Professional practice test questions, they fail and lose money. If you want to save your resources, choose updated and actual Deep-Security-Professional Exam Questions of Pass4sureCert. At the Pass4sureCert offer students Trend Deep-Security-Professional practice test questions, and 24/7 support to ensure they do comprehensive preparation for the Deep-Security-Professional exam.

Trend Micro Certified Professional for Deep Security Sample Questions (Q75-Q80):

NEW QUESTION # 75

The Intrusion Prevention Protection Module is enabled and a Recommendation Scan is run to identify vulnerabilities on a Windows Server 2016 computer. How can you insure that the list of recommendations is always kept up to date?

- A. New rules are configured to be automatically sent to Deep Security Agents when Recommendation Scans are run.
- B. Disabling, then re-enabling the Intrusion Prevention Protection Module will trigger a new Recommendation Scan to be run. New rules will be included in the results of this new scan.
- C. Recommendation Scans are only able to suggest Intrusion Prevention rules when the Protection Module is initially enabled.
- D. **Enable "Ongoing Scans" to run a recommendation scan on a regular basis. This will identify new Intrusion Prevention rules to be applied.**

Answer: D

Explanation:

Ongoing Scans is a feature that enables Deep Security to perform Recommendation Scans at a scheduled interval, ensuring new vulnerabilities or rule updates are continually identified and recommended for enforcement.

From the official documentation:

"Ongoing Scans enable Deep Security to regularly re-run recommendation scans, ensuring that newly discovered vulnerabilities and updated IPS rules are continuously recommended for application." References:

NEW QUESTION # 76

The Intrusion Prevention Protection Module is enabled, its Behavior is set to Prevent and rules are assigned. When viewing the events, you notice that one of Intrusion Prevention rules is being triggered and an event is being logged but the traffic is not being blocked. What is a possible reason for this?

- A. The network engine is running in Inline mode. In Inline mode, Deep Security provides no protection beyond a record of events.
- B. The Deep Security Agent is experiencing a system problem and is not processing packets since the "Network Engine System Failure" mode is set to "Fail Open".
- C. The Intrusion Prevention rule is being triggered as a result of the packet sanity check failing and the packet is being allowed to pass.
- D. **The default Prevention Behavior in this particular rule may be set to Detect. This logs the triggering of the rule, but does not actually enforce the block.**

Answer: D

NEW QUESTION # 77

A collection of servers protected by Deep Security do not have Internet access. How can Smart Scan be used on these computers?

- A. Promote one of the Deep Security Agents on the air gapped computers to become a Relay.
- B. **Install a Smart Protection Server in the environment and set it as the source for File Reputation information.**
- C. Smart Scan can be configured to use a local pattern file containing the same information as the Smart Protection Network.
- D. Smart Scan must contact the Smart Protection Network to function. Any servers without Internet access will be unable to use Smart Scan.

Answer: B

Explanation:

For environments without Internet access, a Smart Protection Server can be deployed locally. This server provides File Reputation

and Web Reputation services for Smart Scan, allowing air-gapped systems to use Smart Scan without requiring direct Internet access.

NEW QUESTION # 78

Based on the script displayed in the exhibit, which of the following statements are correct? Select all that apply.

- A. Deep Security Agents deployed using this script will be assigned a specific policy when activated.
- B. Deep Security Agents deployed using this script will be activated against Tenant 0 in a multi-tenant environment.
- C. Deep Security Agents deployed using this script are activated against a specific tenant.
- D. This script will deploy the Deep Security Agent on a server, but will not automatically activate it.

Answer: A,C

NEW QUESTION # 79

What is the result of performing a Reset operation on a Deep Security Agent?

- A. A Reset operation wipes out any Deep Security Agent settings, including its relationship with Deep Security Manager.
- B. A Reset operation forces an update to the Deep Security Agent software installed on a managed computer.
- C. A Reset operation generates Event information that can be used to troubleshoot Agent-to -Manager communication issues.
- D. A Reset operation forces the Deep Security Agent service to restart on the managed computer.

Answer: A

NEW QUESTION # 80
