AZ-800 Test Passing Score, Reliable AZ-800 Braindumps Sheet

Exam4Tests is a website which is able to speed up your passing the Microsoft certification AZ-800 exams. Our Microsoft certification AZ-800 exam question bank is produced by Exam4Tests's experts's continuously research of outline and previous exam. When you are still struggling to prepare for passing the Microsoft certification AZ-800 Exams, please choose Exam4Tests's latest Microsoft certification AZ-800 exam question bank, and it will brings you a lot of help.

To be eligible for the AZ-800 Exam, candidates should have a solid understanding of Windows Server technologies, as well as experience managing hybrid cloud environments. They should also have experience with Azure services, including Azure Active Directory, Azure Virtual Machines, and Azure Storage. Microsoft recommends that candidates have at least one year of experience managing Windows Server environments, including experience with Windows Server 2016 or later.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q46-Q51):

NEW QUESTION # 46

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

- A. an ExpressRoute circuit
- B. a Site-to-Site VPN
- **C. Azure Extended Network**
- D. Azure Network Adapter

Answer: C

Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/use-azure-network-adapter>

NEW QUESTION # 47

You need to configure remote administration to meet the security requirements. What should you use?

- A. just in time (JIT) VM access
- B. the Remote Desktop extension for Azure Cloud Services
- **C. Azure AD Privileged Identity Management (PIM)**
- D. an Azure Bastion host

Answer: C

NEW QUESTION # 48

The IT department in Contoso is deploying a new version of MS Office in their on-premises environment. The administrator desires to configure the settings with GPOs for Office. What should they do?

- A. Download and install new .adml files and then configure the desired settings in the Administrative Templates node GPO.
- B. Copy the content of the Windows\PolicyDefinitions folder to the Central Store.
- C. Download and install new .admx files and then configure the desired settings in the Administrative Templates node GPO.
- **D. Download and install new administrative template files and then configure the desired settings in the Administrative in the appropriate GPO.**

Answer: D

Explanation:

Administrative templates can be used to control the environment of an operating system(OS) and the user experience. Two available sets of administrative templates are computer-related settings and user-related settings. Administrative template files offer most of the available GPO settings, which change particular registry keys.

NEW QUESTION # 49

Task 9

You plan to create group managed service accounts (gMSAs).

You need to configure the domain to support the creation of gMSAs.

Answer:

Explanation:

See the solution of this Task below

Explanation:

To configure the domain to support the creation of gMSAs, you need to perform the following steps:

On a domain controller or a computer that has the Remote Server Administration Tools (RSAT) installed, open PowerShell as an administrator and run the following command to install the Active Directory module:

Install-WindowsFeature -Name RSAT-AD-PowerShell

Run the following command to create a Key Distribution Service (KDS) root key, which is required for generating passwords for gMSAs. You only need to do this once per domain:

Add-KdsRootKey -EffectiveImmediately

Wait for at least 10 hours for the KDS root key to replicate to all domain controllers in the domain. Alternatively, you can use the -EffectiveTime parameter to specify a past date and time for the KDS root key, but this is not recommended for security reasons.

For more information, see Add-KdsRootKey.

After the KDS root key is replicated, you can create and configure gMSAs using the New-ADServiceAccount and Set-

ADServiceAccount cmdlets. For more information, see Create a gMSA and Configure a gMSA.

NEW QUESTION # 50

Hotspot Question

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the users shown in the following table.

Name	Located in
User1	Contoso.com
User2	Contoso.com/Users
User3	Contoso.com/OU1

The domain has the Group Policy Objects (GPOs) shown in the following table.

Name	Linked to
Default Domain Policy	Contoso.com
Default Domain Controllers Policy	Domain Controllers
GPO1	OU1

The GPOs are configured as shown in the following table.

GPO	Minimum password length
Default Domain Policy	8
Default Domain Controllers Policy	12
GPO1	10

For each of the following statements, select Yes if the statement is true, Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area	
Statements	Yes No
When User1 changes their password, at least eight characters must be used for the new password.	☐ ☐
When User2 changes their password, at least 12 characters must be used for the new password.	☐ ☐
When User3 changes their password, at least 10 characters must be used for the new password.	☐ ☐

Answer:

Explanation:

Answer Area	
Statements	Yes No
When User1 changes their password, at least eight characters must be used for the new password.	☒ ☐
When User2 changes their password, at least 12 characters must be used for the new password.	☐ ☒
When User3 changes their password, at least 10 characters must be used for the new password.	☐ ☒
