Microsoft MB-820 Trustworthy Practice, MB-820 Detailed Study Plan

Our company has always been following the trend of the MB-820 certification. Our research and development team not only study what questions will come up in the MB-820 exam. The content of our MB-820 practice materials is chosen so carefully that all the questions for the exam are contained. And our study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently. If you desire a MB-820 Certification, our products are your best choice.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q22-Q27):

NEW QUESTION # 22

A company plans to integrate tests with its build pipelines.

The company has two Docket sandbox environments: SandboxA and SandboxB.

You observe the following:

* SandboxA is configured without the Test Toolkit installed.

* SandboxB must be configured from scratch. The Test Toolkit must be installed in SandboxB during configuration.

You need to configure the sandbox environments.

How should you complete the cmdlets? To answer, select the appropriate options in the answer area.

```

includeTestToolkit
includeTestFramework
Install-TestToolkitToBcContainer
Import-TestToolkitToBcContainer
    
```

```

$artifactUrl = Get-BcArtifactUrl -type 'OnPrem' -country 'w1'
$licenseFile = 'C:\Lic\license.bclicense'
Get-BcArtifactUrl -type 'OnPrem' -country 'w1'
New-BcContainer `
    -accept_eula `
    -containerName 'SandboxB' `
    -artifactUrl $artifactUrl `
    -imageName 'ImageB' `

    -updateHosts
```

Based on the PowerShell script snippet you've provided and the scenario described, you need to configure Docker sandbox environments for a company with specific requirements for Test Toolkit installations.

For SandboxA, since it is configured without the Test Toolkit installed, you would typically use the PowerShell cmdlet `Install-TestToolkitToBcContainer` to install the Test Toolkit into the Business Central Docker container.

For SandboxB, which must be configured from scratch with the Test Toolkit installed during configuration, you would include the Test Toolkit as part of the `New-BcContainer` script block that creates the container.

The relevant cmdlets and parameters for SandboxB would include:

- * `-includeTestToolkit`: This parameter ensures that the Test Toolkit is included during the creation of the new container.

Given the limited context from the image, here's how you should complete the cmdlets for SandboxB:

- * Add `-includeTestToolkit` in the `New-BcContainer` script to ensure the Test Toolkit is installed when creating SandboxB.

- * Since you are setting up SandboxB from scratch, you don't need to run `Install-TestToolkitToBcContainer` separately as the toolkit will be included at the time of container creation with the `-includeTestToolkit` parameter.

For the `New-BcContainer` cmdlet, you would fill in the placeholders with the appropriate values for `artifactUrl`, `imageName`, and `licenseFile` if they are required for your specific setup.

NEW QUESTION # 25

Hotspot Question

You plan to create a table to hold client data.

You have the following data integrity requirements:

- Lookups into other records must be established.
- Validate if a record exists in a destination record.

You need to select the table field property to use for each requirement.

Which table field property should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one p.
