

100% Pass 2025 NABCEP Certification PVIP Exam Infor

NABCEP PV System Inspector
Certification Exam Questions and
Answers 100% Pass

During an inspection of a 90kW commercial rooftop PV system, the inspector notices that the orientation of the PV does not match the plans. The solar installer said the engineer told him that it would be code compliant to change the tilt or azimuth, since the NEC does not cover PV orientation and the project will actually be safer and produce more energy. What is the best reason that the inspector gave for a failed the inspection -

✓✓The installation does not match the permit design

When dc PV circuits are installed in conduit, it is required to have a label that says something like: "WARNING: PHOTOVOLTAIC POWER SOURCE." What is the MAXIMUM distance between labels? - ✓✓10'

We always aim at improving our users' experiences. You can download the PDF version demo before you buy our PVIP test guide, and briefly have a look at the content and understand the PVIP exam meanwhile. After you know about our PVIP actual questions, you can decide to buy it or not. The process is quiet simple, all you need to do is visit our website and download the free demo. That would save lots of your time, and you'll be more likely to satisfy with our PVIP Test Guide.

The PVIP Board Certification is recognized throughout the solar industry as a mark of excellence and is often required by employers and project owners. It is also a key credential for professionals seeking to advance their careers or specialize in certain areas of PV installation.

PVIP Latest Study Questions - Test PVIP Dump

In some companies, the certificate of the exam is directly linked with the wages and the position in your company. Our PVIP exam cram will offer you the short way to get the certificate. With the most eminent professionals in the field to compile and examine the PVIP Test Dumps, they have a high quality. Purchasing the PVIP exam cram of us guarantees the pass rate, and if you can't pass, money back is guaranteed.

The North American Board of Certified Energy Practitioners (NABCEP) PV Installation Professional (PVIP) Board Certification Exam is a rigorous certification exam for professionals in the solar energy industry. PV Installation Professional (PVIP) Board Certification certification is designed to demonstrate a high level of competency in the design, installation, and maintenance of photovoltaic (PV) solar energy systems. The PVIP Certification is recognized as the industry standard for solar professionals, and is a requirement for many job positions in the solar energy industry.

NABCEP PV Installation Professional (PVIP) Board Certification Sample Questions (Q59-Q64):

NEW QUESTION # 59

The NEC requires that PV systems installed on dwellings incorporate which of the following components?

- A. A dc ground-fault protect device
- **B. A lockable utility disconnect at the point-of-utility interconnection**
- C. Blocking diodes across each module
- D. Dc lightning surge arrestors

Answer: B

NEW QUESTION # 60

On a PV system larger than 100kw, which PV array design will provide the HIGHEST degree of performance monitoring. Granularity, and ease of troubleshooting performance issues?

- **A. Multiple-string inverter system with data acquisition system located at each dc combiner**
- B. Multiple-string inverter system with data acquisition system located at each inverter.
- C. Central inverter with data acquisition system located at the inverter.
- D. Multiple-string inverter system with monitored dc-to-dc converters located at each module

Answer: A

NEW QUESTION # 61

A homeowner is weighing the PV module options for a roof-mounted solar array. Which is a correct option to present to the homeowner?

- **A. Microinverters can be installed with either polycrystalline or monocrystalline modules, negating the need for rapid shutdown compliance.**
- B. Polycrystalline modules are more shade-tolerance than either amorphous or monocrystalline modules and allow a larger array to be installed, including in area where shading could be seasonally problematic.
- C. Building-integrated PV shingles will be flush or nearly flush with other shingles, but the electrical energy produced will be less than polycrystalline or monocrystalline modules.
- D. Rapid shutdown requirements within 1 ft of the array boundary.

Answer: A

NEW QUESTION # 62

A 10 kW array produces 14,000 kWh annually. What is the specific yield in kWh/kW?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 63

A tap conductor is to be connected to a feeder supplied by both a utility service source and a utility-interactive inverter source. The feeder utility source is a 400A breaker in a service panel, the inverter overcurrent protection device is rated at 100A, and the inverter continuous output current is 72. The tap conductor that is to be installed will be 17 ft. long. It will be located in a raceway and will supply a subpanel with a 50A main breaker.

What is the MINIMUM required ampacity of the tap conductor?

- A. 0
- B. 400A
- C. 50A
- D. 1

Answer: A

NEW QUESTION # 64
