## **Netskope Certified Cloud Security Architect Sample Questions (Q61-Q66):**

**NEW QUESTION # 61**

Review the exhibit.

Exhibit

New Malware Remediation Profile

REMEDATION PROFILE NAME\*

Crowdstrike

CONNECT TO EDR SERVER:

☒ crowdstrike-demo

TAKE ACTIONS:

☐ Isolate ☐ Alert ☒ Add to watchlist/blocklist

CANCEL

You are asked to integrate Netskope with Crowdstrike EDR. You added the Remediation profile shown in the exhibit. Which action will this remediation profile take?

- A. The malware hash will be added as an IOC in Netskope.
- **B. The malware hash will be added as an IOC in Crowdstrike.**
- C. The malware will be quarantined.
- D. The endpoint will be isolated.

**Answer: B**

#### NEW QUESTION # 62

You are consuming Audit Reports as part of a Salesforce API integration. Someone has made a change to a Salesforce account record field that should not have been made and you are asked to verify the previous value of the structured data field. You have the approximate date and time of the change, user information, and the new field value. How would you accomplish this task?

- A. Query Skope IT Page Events and look for the specific Page URL that was called under the Application section.
- **B. Query Skope IT for an Access Method of API Connector and search Application Event Details for the Old Value field using the User details and Edit Activity.**
- C. Use the Application Events Data Collection within Advanced Analytics and filter on the changed field value.
- D. Create a classic report and apply a query that filters on the changed field value.

**Answer: B**

Explanation:

To verify the previous value of a structured data field in Salesforce after an unauthorized change, you would use Skope IT with an Access Method of API Connector. This method allows you to search the Application Event Details for the 'Old Value' field. By filtering with the user details and the edit activity, you can pinpoint the exact change and retrieve the original value of the field.

#### NEW QUESTION # 63

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs. How would you accomplish this task?

- A. Use IPsec tunnels from the AWS Virtual Private Gateway.

- **B. Use IPsec tunnels from the AWS Transit Gateway.**
- C. Use GRE tunnels from the AWS Transit Gateway.
- D. Use GRE tunnels from the AWS Virtual Private Gateway

**Answer: B**

Explanation:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required<sup>12</sup>. The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP<sup>1</sup>.

#### NEW QUESTION # 64

You are asked to ensure that a Web application your company uses is both reachable and decrypted by Netskope. This application is served using HTTPS on port 6443. Netskope is configured with a default Cloud Firewall configuration and the steering configuration is set for All Traffic.

Which statement is correct in this scenario?

- **A. Enable "Steer non-standard ports" in the steering configuration and add the domain and port as a new non-standard port**
- B. Nothing is required since Netskope is steering all traffic.
- C. Enable "Steer non-standard ports" in the steering configuration and create a corresponding Real-time Protection policy to allow the traffic
- D. Create a Firewall App in Netskope along with the corresponding Real-time Protection policy to allow the traffic.

**Answer: A**

Explanation:

To ensure that the web application using HTTPS on port 6443 is both reachable and decrypted by Netskope, the correct action is to enable "Steer non-standard ports" in the steering configuration and add the domain and port as a new non-standard port. This is because Netskope's default configuration steers standard HTTP/HTTPS traffic, typically on ports 80 and 443. Since port 6443 is a non-standard port for HTTPS traffic, it requires explicit configuration to be steered through Netskope<sup>1</sup>.

The process for configuring non-standard ports in Netskope is detailed in the Netskope Knowledge Portal, which provides step-by-step instructions on how to steer HTTP(S) traffic over non-standard ports<sup>1</sup>. This includes adding the specific non-standard port number in the steering configuration to ensure that traffic to and from that port is properly handled by Netskope.

#### NEW QUESTION # 65

You are asked to create a customized restricted administrator role in your Netskope tenant for a newly hired employee. Which two statements are correct in this scenario? (Choose two.)

- A. All role privileges default to Read Only for all functional areas.
- **B. The scope of the data shown in the UI can be restricted to specific events.**
- **C. Obfuscation can be applied to all functional areas.**
- D. An admin role prevents admins from downloading and viewing file content by default.

**Answer: B,C**

#### NEW QUESTION # 66

.....

Whereas the other two Netskope Certified Cloud Security Architect (NSK300) exam questions formats are concerned both are the easy-to-use and compatible mock NSK300 exam that will give you a real-time environment for quick Netskope Exams preparation. Now choose the right Netskope Certified Cloud Security Architect (NSK300) exam questions format and start this career advancement journey.
