

100% Pass 2025 Oracle Perfect Exam Vce 1z1-084 Free

Oracle 1z0-1106-1 Oracle HCM Business Process Foundations Associate Rel 1 1

100% Pass Quiz 2023 Oracle Perfect 1z0-1106-1 Exam Cram

Our company has become the front-runner of this career and help exam candidates around the world win in valuable time. With years of experience dealing with 1z0-1106-1 exam, they have thorough grasp of knowledge which appears clearly in our [1z0-1106-1 Exam Questions](#). All 1z0-1106-1 study materials you should know are written in them with three versions to choose from: the PDF, Software and APP online versions.

If someone who can pass the exam, they can earn a high salary in a short time. If you decide to beat the exam, you must try our 1z0-1106-1 exam torrent, then, you will find that it is so easy to pass the exam. You only need little time and energy to review and prepare for the exam if you use our [1z0-1106-1 prep torrent](#) as the studying materials. So it is worthy for them to buy our 1z0-1106-1 learning prep. We provide the free demo of our 1z0-1106-1 training guide so as to let you have a good understanding of our 1z0-1106-1 exam questions before your purchase.

**Oracle HCM Business Process Foundations Associate Rel 1
Pass4sure Test - 1z0-1106-1 Pdf Vce & 1z0-1106-1 Latest Reviews**

Oracle certification 1z0-1106-1 exam is one of the many IT employees' most wanting to participate in the certification exams. Passing the exam needs rich knowledge and experience. While accumulating these abundant knowledge and experience needs a lot of time. Maybe you can choose some training courses or training tool and spending a certain amount of money to select a high quality training institution's training program is worthwhile. Pass4sureVCE is a website which can meet the needs of many IT employees who participate in Oracle [Certification 1z0-1106-1 Exam](#). Pass4sureVCE's

100% Pass Quiz 2023 Oracle Perfect 1z0-1106-1 Exam Cram

2025 Latest Test4Sure 1z1-084 PDF Dumps and 1z1-084 Exam Engine Free Share: https://drive.google.com/open?id=1MAiMEowZBO_8fUvbQyPknrBgvrbyvOsv

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - 1z1-084 test answers, which are tailor-made for students who want to obtain Oracle certificates. According to statistics, by far, our 1z1-084 Guide Torrent has achieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the Oracle Database 19c Performance and Tuning Management test torrent is updated every day.

To pass the Oracle 1Z0-084 exam, candidates must have a strong understanding of Oracle Database 19c architecture and features, as well as experience with database performance and tuning management. Candidates should also possess hands-on experience with the Oracle Database 19c platform, which will be tested through a series of multiple-choice questions and performance-based scenarios. Upon passing the exam, professionals will earn the Oracle Certified Specialist (OCS) certification, demonstrating their expertise in Oracle Database 19c performance and tuning management. Oracle Database 19c Performance and Tuning Management certification can help professionals advance their careers and differentiate themselves in the competitive job market.

Oracle 1Z0-084 (Oracle Database 19c Performance and Tuning Management) certification exam is designed to validate the skills of professionals in managing the performance and tuning of Oracle Database 19c. 1z1-084 Exam is intended for database administrators, developers, and IT professionals who are responsible for managing Oracle Database 19c performance and tuning.

Oracle 1Z0-084 certification exam is a valuable credential for professionals seeking to prove their expertise in managing the performance and tuning of Oracle Database 19c. It demonstrates their ability to optimize the performance of the database and ensure that it runs smoothly and efficiently. Oracle Database 19c Performance and Tuning Management certification also shows that

they understand how to identify and resolve performance issues quickly and effectively.

Exam Vce 1z1-084 Free & Oracle Valid Test 1z1-084 Tips: Oracle Database 19c Performance and Tuning Management Exam Pass Once Try

It is really not easy to pass 1z1-084 exam, but once you get the exam certification, it is not only a proof of your ability, but also an internationally recognised passport for you. You cannot blindly prepare for 1z1-084 exam. Our Test4Sure technical team have developed the 1z1-084 Exam Review materials in accordance with the memory learning design concept, which will relieve your pressure from the preparation for 1z1-084 exam with scientific methods.

Oracle Database 19c Performance and Tuning Management Sample Questions (Q12-Q17):

NEW QUESTION # 12

A database instance is suffering poor I/O performance on two frequently accessed large tables.

No Big Table caching occurs in the database.

Examine these parameter settings:

```
PARALLEL_DEGREE_POLICY=LIMITED
DB_BIG_TABLE_CACHE_PERCENT_TARGET=10
DB_CACHE_SIZE=500M
DB_KEEP_CACHE_SIZE=0M
```

Which are two actions either one of which will allow Big Table caching to occur?

- A. Setting DB_KEEP_CACHE_SIZE to at least 50M
- B. Increasing DB_BIG_TABLE_CACHE_PERCENT_TARGET to at least 50
- C. Setting PARALLEL_DEGREE_POLICY=ADAPTIVE
- D. Increasing DB_CACHE_SIZE to 1 G
- E. Setting PARALLEL_DEGREE_POLICY=AUTO
- F. Increasing DB_BIG_TABLE_CACHE_PERCENT_TARGET to at least 25

Answer: D,F

Explanation:

Big Table caching is a feature that allows frequently accessed large tables to be cached in memory to improve I/O performance.

From the parameter settings provided, Big Table caching is not occurring because

DB_BIG_TABLE_CACHE_PERCENT_TARGET is set to 10, which is the minimum threshold for enabling the feature, but the size of the cache is too small for the big tables to be effectively cached.

To enable Big Table caching, one of the following actions could be taken:

* C (Correct): Increasing DB_BIG_TABLE_CACHE_PERCENT_TARGET to at least 25. This action would allocate a larger percentage of the buffer cache for storing big tables, which could allow for caching large tables and thus improve I/O performance.

* D (Correct): Increasing DB_CACHE_SIZE to 1G. Since the size of the buffer cache is a determining factor for how much data can be cached, increasing this parameter would provide more memory space for big tables to be cached.

Options A, B, E, and F will not enable Big Table caching because:

* A: Increasing DB_BIG_TABLE_CACHE_PERCENT_TARGET to 50 without adjusting the overall size of the cache might still not be sufficient if the DB_CACHE_SIZE is not large enough to hold the big tables.

* B: Setting DB_KEEP_CACHE_SIZE to at least 50M only specifies a separate buffer pool for objects with the KEEP cache attribute and does not affect Big Table caching.

* E and F: Changing the PARALLEL_DEGREE_POLICY to ADAPTIVE or AUTO influences the behavior of parallel execution but does not directly enable or influence Big Table caching.

References:

* Oracle Database Performance Tuning Guide: Big Table Caching

* Oracle Database Reference: DB_BIG_TABLE_CACHE_PERCENT_TARGET

* Oracle Database Reference: DB_CACHE_SIZE

NEW QUESTION # 13

Examine this output of a query of V\$PGA_TARGET_ADVICE:

TARGET_MB	CACHE_HIT_PERC	ESTD_OVERALLOC_COUNT
500	58	246
600	61	138
700	68	30
800	74	0
900	82	0
1000	83	0
1500	84	0

Which statements is true?

- A. PGAA_AGGREGATE should be set to at least 800 MB.
- B. GGREGATE_TARGET should be set to at least 700 MB.
- C. With a target of 800 MB or more, all one-pass execution work areas would be eliminated.
- D. With a target of 700 MB or more, all multipass executions work areas would be eliminated.

Answer: C

Explanation:

The query output from V\$PGA_TARGET_ADVICE provides tuning information for the PGA (Program Global Area). Let's break it down step by step:

Key Columns in the Output:

* TARGET_MB:

* Represents the hypothetical PGA_AGGREGATE_TARGET values (in megabytes) evaluated by Oracle.

* CACHE_HIT_PERC:

* The percentage of work areas that could execute in-memory (optimal execution) without requiring temporary disk writes.

* Higher percentages indicate fewer work areas requiring disk I/O.

* ESTD_OVERALLOC_COUNT:

* The estimated number of work areas that need to go to disk (multipass operations or overallocations).

Observations from the Data:

* At TARGET_MB = 700 MB:

* The CACHE_HIT_PERC is 68%.

* The ESTD_OVERALLOC_COUNT is 30. This indicates that some multipass work areas still exist.

* At TARGET_MB = 800 MB:

* The CACHE_HIT_PERC rises to 74%.

* The ESTD_OVERALLOC_COUNT drops to 0. This indicates that no work areas require multipass execution.

* At TARGET_MB = 900 MB and above:

* The CACHE_HIT_PERC increases slightly to 82%-84%.

* The ESTD_OVERALLOC_COUNT remains 0, meaning that all work areas are now either optimal or one-pass.

Why D is Correct:

* At 800 MB or more, the ESTD_OVERALLOC_COUNT is 0, indicating that all one-pass execution work areas are eliminated.

* A one-pass execution requires temporary disk I/O for intermediate results, but with sufficient PGA, these are no longer necessary.

Why Other Options Are Incorrect:

* Option A:

* It mentions all multipass executions work areas would be eliminated at 700 MB. This is incorrect because, at 700 MB, the ESTD_OVERALLOC_COUNT is still 30, indicating some multipass work areas still exist.

* Option B:

* Suggests setting the PGA_AGGREGATE_TARGET to at least 800 MB, which is partially correct but does not address the elimination of one-pass execution.

* Option C:

* Suggests setting the PGA_AGGREGATE_TARGET to at least 700 MB, which is not sufficient to eliminate all one-pass executions, as shown by the ESTD_OVERALLOC_COUNT of 30.

NEW QUESTION # 14

Examine these commands, which execute successfully:

```
SQL> ALTER SYSTEM SET AWR_PDB_AUTOFLUSH_ENABLED=TRUE;
```

```
SQL> EXEC dbms_workload_repository.modify_snapshot_settings(interval=>60);
```

Which statement is true?

- A. AWR- snapshots in all pluggable databases will be purged automatically after every 60 mins.
- B. ADDM, AWR, and ASH reports can be purged automatically.
- C. AD DM is enabled for all pluggable databases.
- D. AWR snapshots can be purged manually in pluggable databases.

Answer: D

Explanation:

The DBMS_WORKLOAD_REPOSITORY.MODIFY_SNAPSHOT_SETTINGS procedure allows setting attributes related to AWR snapshots. While the interval setting controls the frequency of snapshot generation, purging them is a separate process that can be managed either automatically (with retention settings) or manually. - * Oracle Multitenant Administrator's Guide, 19c

NEW QUESTION # 15

You manage a 19c database with default optimizer settings.

This statement is used extensively as subquery in the application queries:

```
SELECT city_id FROM sh2.sales WHERE city_id=BI
```

You notice the performance of these queries is often poor and, therefore, execute:

```
SELECT city_id,COUNT(*) FROM sh2.sales GROUP BY city_id;
```

Examine the results:

CITY_ID	COUNT(*)
1	8
2	1
3	12
4	121
5	1218921
6	118

There is no index on the CITY_ID column.

Which two options improve the performance?

- A. Generate frequency histograms on the CITY_ID column.
- B. Create an index on the CITY ID column.
- C. Activate the adaptive plans.
- D. Force the subquery to use dynamic sampling.
- E. Use a SQL Profile to enforce the appropriate plan.

Answer: A,B

Explanation:

In this scenario, creating an index and generating frequency histograms are two methods that can potentially improve performance:

* A (Correct): Generating frequency histograms on the CITY_ID column can help the optimizer make better decisions regarding the execution plan, especially if the data distribution is skewed. Histograms provide the optimizer with more detailed information about the data distribution in a column, which is particularly useful for columns with non-uniform distributions.

* B (Correct): Creating an index on the CITY_ID column would speed up queries that filter on this column, especially if it's used frequently in the WHERE clause as a filter. An index would allow for an index range scan instead of a full table scan, reducing the I/O and time needed to execute such queries.

* C (Incorrect): While SQL profiles can be used to improve the performance of specific SQL statements, they are usually not the first choice for such a problem, and creating a profile does not replace the need for proper indexing or statistics.

* D (Incorrect): Forcing the subquery to use dynamic sampling might not provide a consistent performance benefit, especially if the table statistics are not representative or are outdated. However, dynamic sampling is not as effective as having accurate statistics and a well-chosen index.

* E (Incorrect): Adaptive plans can adjust the execution strategy based on the conditions at runtime.

While they can be useful in certain scenarios, in this case, creating an index and ensuring accurate statistics would likely provide a more significant performance improvement.

NEW QUESTION # 16

Which two Oracle Database features use database services?

- **A. Database Resource Manager**
- **B. Oracle Scheduler**
- C. Oracle Automatic Reoptimization
- D. Oracle SQL Tuning Advisor
- E. Oracle SQL Performance Management

Answer: A,B

Explanation:

Database services in Oracle are used to manage how resources are allocated and how workloads are managed within the database. The features that use database services are:

* B (Correct):Database Resource Manager (DBRM) uses services to control resource allocation to different workloads. It ensures that resources are assigned to the most critical tasks first, based on the service associated with the workload.

* E (Correct):Oracle Scheduler can also utilize database services. Jobs in Oracle Scheduler can be assigned to different services to control resource allocation and prioritization.

The other features mentioned are related to SQL performance but do not directly utilize database services in the way Resource Manager and Scheduler do:

* A:Oracle Automatic Reoptimization is a feature that allows the database to automatically improve the execution plan of a SQL statement after it is executed, based on the actual performance metrics, but it does not directly use database services.

* C:Oracle SQL Performance Management involves various components of SQL tuning and monitoring, but it does not use database services to operate.

* D:Oracle SQL Tuning Advisor provides advice on how to tune SQL queries for better performance.

While it can be used in conjunction with services for managing and analyzing workloads, it doesn't use services in its core functionality.

NEW QUESTION # 17

.....

If you are preparing for an exam, it may spend lots of time, but don't worry, if you are preparing for the 1z1-084 exam, the product of our company will help you save your time. The product of our company will list the major key points of the 1z1-084 exam, and you can grasp the knowledge points as quickly as possible, therefore the time is saving. Besides, the product for 1z1-084 Exam also provide specific training materials for the exam. And the PDF version is convenient to read, and support printing, while the software version stimulate the real environment of the 1z1-084 exam. The APP online version is slao available of the product, you can learn at any time and at any place. Choosing our product, it will help you.
