Get Success in Salesforce CRT-211 Exam Questions and Grow Your Career

The web-based practice test is similar to the desktop-based software, with all the same elements of the desktop practice exam. The mock exam can be accessed from any browser and does not require installation. The CRT-211 questions in the mock test are the same as those in the real exam. Candidates can take the web-based Certification Preparation for Advanced Administrator (CRT-211) practice test immediately, regardless of the operating system and browser they are using.

Salesforce Certification Preparation for Advanced Administrator Sample Questions (Q116-Q121):

NEW QUESTION # 116

The Forecast Category on the Opportunity record maps directly, on a one-to-one basis, to the aggregates on the Forecast tab.

- A. False

- B. True

Answer: B

NEW QUESTION # 117

An administrator at Universal Containers has been asked by the compliance team to understand and track various sensitivity levels for its data in Salesforce. The administrator has enabled Data Classification and configured appropriate sensitivity levels. The compliance team would like a report showing field level sensitivity and classification. What should the administrator recommend?

- A. Configure a custom Data Classification and Metadata report type.
- B. Create a custom Entity Definition and Field Definitions report type.
- C. Use the Data Classification Metadata list view.
- D. Run the standard Data Classification report.

Answer: D

Explanation:

Run the standard Data Classification report is what the administrator should recommend to the compliance team. Data Classification is a feature that allows administrators to flag where sensitive information is stored in Salesforce by assigning sensitivity and classification levels to fields. Data Classification also provides a standard report that shows field level sensitivity and classification for all fields in an org. The administrator can run this report and share it with the compliance team to meet their requirement.

NEW QUESTION # 118

An administrator created a new custom object. When trying to upload new records to the custom object using Data Loader, they are unable to see the new custom object in the list of available objects. What should the administrator do to resolve the issue?

- A. Ensure Allow Sharing is checked on the custom object.
- B. Assign a permission set to give them access to the new object.
- C. Check the Field-Level Security of the new custom object's Name field.
- D. Confirm the object is marked as deployed and not in development.

Answer: D

Explanation:

When creating a new custom object, administrators can choose to mark it as deployed or in development. If an object is marked as in development, it is not visible to users or available in tools such as Data Loader, even if they have access to it through their profile or permission set. To make the object available for data import, the administrator needs to mark it as deployed. References: https://help.salesforce.com/s/articleView?id=sf.customize_deployment_status.htm&type=5

NEW QUESTION # 119

James, a recruiting manager, needs a picklist field implemented on the Position object by the end of the week. Matt, the system administrator, was too busy to fulfill the requirement. What should Matt do, to prevent this from happening again?

- A. Delegate James as a delegated administrator for the Recruiting App
- B. Assign James with the "Modify All Data" permission set
- C. Change OWD for the Position Object to Public Read/Write.
- D. Delegate James as a delegated administrator for the Position Object

Answer: D

NEW QUESTION # 120

DreamHouse Realty wants to notify an assigned agent when an appointment is booked on a custom object for one of their listed homes along with the total number of appointments booked so far. The administrator has configured a Roll-up Summary for the

number of appointments as well as a flow to detect the creation of a new appointment and send the information to the agent. What consideration about process automation should the administrator be aware of to ensure the right Information is delivered?

- A. Only standard objects can be used with Roll-up Summary fields.
- B. Rows can only be triggered from the records created on standard objects.
- C. Roll-up Summary calculations will prevent a Flow from being triggered.
- **D. Roll-up Summary calculations run after processes and workflows.**

Answer: D

Explanation:

Roll-up Summary calculations are performed after processes and workflows are executed, which means that any changes made by processes or workflows will not be reflected in the roll-up summary field until after the transaction is committed. This could cause inaccurate or outdated information to be delivered to the agent if the flow relies on the roll-up summary field value.

NEW QUESTION # 121

.....

APP test engine of Salesforce CRT-211 exam is popular with at least 60% candidates since all most certification candidates are fashion and easy to adapt to this new studying method.
