Our CSA study materials are not only as reasonable priced as other makers, but also they are distinctly superior in the following respects.

ServiceNow Certified System Administrator Sample Questions (Q344-Q349):

NEW QUESTION # 344

Which module would you use to create a new automation of business logic such as approvals, tasks, and notifications?

- A. Process Automation > Active Flows
- B. Process Automation > Process Flow
- C. Process Automation > Flow Administration
- **D. Process Automation > Flow Designer**
- E. Process Automation > Workflow Editor

Answer: D

Explanation:

NEW QUESTION # 345

What are the steps for importing data using an import set?

- A. Set up LDAP; Test map; Create update set; Run import; Apply update set
- **B. Load the data; Create transform map; Transform data; Clean up import table**
- C. Select source file; Run automap; Transform data; Clean up target table
- D. Identify source; Import transform map; Run transformer; Verify import

Answer: B

Explanation:

Importing data into ServiceNow involves using Import Sets, which act as temporary staging tables before transferring data to the target table. The correct sequence of steps is as follows:

Load the Data

Upload data from an external source (CSV, Excel, XML, JDBC, or API).

The data is stored in an Import Set table (temporary staging table).

Create Transform Map

A Transform Map defines how data from the Import Set should be mapped to the target table (e.g., incident, cmdb_ci).

Example: Mapping "Full Name" in Import Set to "User Name" in sys_user table.

Transform Data

Executes the Transform Map, moving data from the Import Set into the target table.

Any data conversion rules or business logic (such as field mapping, script processing) are applied.

Clean Up Import Table

After a successful import, the temporary Import Set table can be deleted to free up space.

A: Select source file; Run automap; Transform data; Clean up target table Automap is optional and does not apply in every scenario.

Cleaning up the target table is incorrect—the cleanup applies to the Import Set table, not the target table.

B: Set up LDAP; Test map; Create update set; Run import; Apply update set LDAP is for user authentication, not for importing data.

Update Sets are used for moving configurations, not data imports.

C: Identify source; Import transform map; Run transformer; Verify import

"Run transformer" is incorrect- the correct step is "Transform Data".

Importing does not require a verification step; instead, data is reviewed using Transform History.

NEW QUESTION # 346

What are different types of Data Sources, which may be imported into ServiceNow? (Choose four.)

- A. Local Sources (i.e. XML, CSV, Excel)
- B. Implementation Spoke
- C. DataHub
- D. LDAP Connection
- E. JDBC Connection
- F. Network Server

Answer: A,C,D,E

NEW QUESTION # 347

Which one of the following statements describes the contents of the Configuration Management Database (CMDB)?

- A. The CMDB contains ITIL process data pertaining to configuration items
- B. The CMDB contains the Business Rules that direct the intangible, configurable assets used by a company
- C. The CMDB contains data about tangible and intangible business assets
- D. The CMDB archives all Service Management PaaS equipment metadata and usage statistics

Answer: C

NEW QUESTION # 348

The Employee On-boarding team has asked for a way for managers to order computers, monitors, business Cards, and cell phones for new employees. How would you proceed to meet this requirement?

- A. Create Order Guide
- B. Create Requested Item
- C. Create Record Producer
- D. Create On-boarding Bot

Answer: A

Explanation:

An Order Guide in ServiceNow is used to group multiple catalog items together so that users can request all necessary items in one streamlined process.

The Employee Onboarding team needs a way for managers to order multiple items (computers, monitors, business cards, cell phones) for new employees.

An Order Guide allows managers to request all necessary items in a single request, instead of ordering them one by one.

The guide can also use rules and conditions to determine which items should be included based on user input (e.g., different job roles might require different devices).

A: Create Record Producer- Record Producers are used to capture information and create records (e.g., Incidents, Requests) but do not group multiple catalog items together like an Order Guide does.

C: Create Requested Item- A Requested Item (sc_req_item) is created when a request is submitted, but it is not the starting point for fulfilling this requirement.

D: Create Onboarding Bot- No such feature exists in ServiceNow; onboarding is typically handled via Order Guides and HR Case Management.

ServiceNow Order Guides Documentation
