Latest 100% Free Platform-App-Builder – 100% Free Pass4sure Pass Guide | Platform-App-Builder Practice Test

Frankly speaking, it is a common phenomenon that we cannot dare to have a try for something that we have little knowledge of or we never use. When it comes to our Platform-App-Builder learning braindumps, you don't need to be afraid of that since we will provide free demo for you before you decide to purchase them. In doing so, you never worry to waste your time or money and have a free trial of our Platform-App-Builder Exam Engine to know more and then you can choose whether buy Platform-App-Builder study material or not.

Salesforce Certified Platform App Builder Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which two features can be used to allow users to access Visual Workflows? Choose 2 answers

- A. Custom Button
- B. Quick Action
- C. Invoked by Process
- D. Visual Workflow Launcher

Answer: C,D

NEW QUESTION # 69

Which two are true statements about record types? (Choose two.)

- A. They can be enabled by profile and permission set.
- B. They allow different page layouts and mandatory fields.
- C. They can be used to control user role hierarchy.
- D. They allow different picklist values for all picklist fields.

Answer: A,B

NEW QUESTION # 70

Universal Containers is piloting new features in an existing sandbox and wants to prevent outbound email sends during testing. What should the app builder do to meet the requirement?

- A. Email deliverability set to no access.
- B. Email relay to the configured host enabled.
- C. Email configured for SMTP authentication.
- D. Email deliverability set to system email only.

Answer: A

Explanation:

Setting email deliverability to no access would prevent outbound email sends during testing in a sandbox.

This would ensure that no emails are sent to any users or external email addresses from the sandbox. Setting email deliverability to system email only would still allow some emails to be sent, such as password reset emails or new user emails. Configuring SMTP authentication or email relay would not affect email deliverability in a sandbox

NEW QUESTION # 71

Universal Containers allows all employees to submit reviews for leadership using a custom object called Review.

These Reviews should only be visible to the HR department and the employee who submitted the record.

Which three steps should an app builder take to properly control access to Reviews?

Choose 3 answers

- A. Set organization-wide default to Private.
- B. Add a Master-Detail (User; field on the Review object.
- C. Disable Grant Access Using Hierarchies.
- D. Create a criteria-based Sharing Rule for the HR Department.
- E. Remove Review Read permission from non-HR Department user Profiles.

Answer: A,C,D

Explanation:

To control access to the Review custom object such that only the HR department and the submitting employee can see the reviews, the following steps should be taken:

* A). Disable Grant Access Using Hierarchies: By default, Salesforce allows users higher in the role hierarchy to access records owned by users lower in the hierarchy. Since reviews should only be visible to HR and the submitting employee, you need to disable Grant Access Using Hierarchies on the Review object to prevent anyone else in the hierarchy from automatically gaining access to these records.

Record Access and Role Hierarchies

* C). Create a criteria-based Sharing Rule for the HR Department: With the organization-wide default (OWD) set to Private, you'll need to create a criteria-based sharing rule to ensure that HR users can view the Review records. This rule would give HR access to the records based on a specified condition, such as all records of the Review object.

Reference: Sharing Rules

* E). Set organization-wide default to Private: Setting the organization-wide default (OWD) for the Review object to Private ensures that no user, other than the record owner (the submitting employee) and those explicitly granted access (HR), can see the Review records by default.

Reference: Organization-Wide Defaults

Why the other options are incorrect:

Option B: Add a Master-Detail (User) field on the Review object: This is not necessary in this scenario because the primary

relationship is about controlling access through sharing rules, not creating a master-detail relationship. Moreover, this would complicate access control, which is better managed via sharing settings.

Option D: Remove Review Read permission from non-HR Department user Profiles: This step is redundant if the organization-wide default is set to Private. Profile permissions control the general ability to access the object, while the visibility of specific records is controlled by sharing rules and OWD. Removing read access via profiles would block all users, including the ones submitting the reviews, from accessing the object.

In summary, by disabling Grant Access Using Hierarchies, setting OWD to Private, and implementing a criteria-based sharing rule for HR, you can ensure that only HR and the submitting employee can view Review records.

Reference: Record Sharing Overview

NEW QUESTION # 72

Where can a custom button be placed? Choose 3 answers

- A. On the User Object
- B. On a Web-to-Case form
- C. On a related list
- D. On a Person Account
- E. On the Custom List View

Answer: C,D,E

NEW QUESTION # 73

.....

As everybody knows, the most crucial matter is the quality of Platform-App-Builder study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best Platform-App-Builder Exam Questions for your study to pass it. And we have the latest Platform-App-Builder test guide. Only with strict study, we write the latest and the specialized study materials. We can say that our Platform-App-Builder exam questions are the most suitable for examinee to pass the exam.
