

# 100% Pass 2026 Palo Alto Networks Accurate PSE-Cortex: Palo Alto Networks System Engineer - Cortex Professional Excellect Pass Rate

DOWNLOAD the newest TestsDumps PSE-Cortex PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Xdv8nSbOVFzoDUJZJ3rZBfSgvIWwQmr>

Success is has method. You can be successful as long as you make the right choices. TestsDumps's Palo Alto Networks PSE-Cortex exam training materials are tailored specifically for IT professionals. It can help you pass the exam successfully. If you're still catching your expertise to prepare for the exam, then you chose the wrong method. This is not only time-consuming and laborious, but also is likely to fail. But the remedy is not too late, go to buy TestsDumps's Palo Alto Networks PSE-Cortex Exam Training materials quickly. With it, you will get a different life. Remember, the fate is in your own hands.

The PSE-Cortex certification is highly valued in the network security industry as it demonstrates that the certified professional has the knowledge and skills to design, deploy, and manage a comprehensive endpoint protection solution. It also indicates that the certified professional is up-to-date with the latest trends and best practices in the industry. As a result, PSE-Cortex Certification holders are highly sought after by companies and organizations looking to secure their networks and endpoints from cyber threats.

>> PSE-Cortex Excellect Pass Rate <<

## 2026 Palo Alto Networks PSE-Cortex Authoritative Excellect Pass Rate

Our PSE-Cortex preparation exam can provide all customers with the After-sales service guarantee. The After-sales service guarantee is mainly reflected in to many aspects. The most important one is that we can promise that our PSE-Cortex study questions will meet the customer demand for privacy protection. As is known to us, the privacy protection of customer is very important, No one wants to breach patient. So our PSE-Cortex Actual Exam pays high attention to protect the privacy of all customers.

## Palo Alto Networks System Engineer - Cortex Professional Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Which step is required to prepare the VDI Golden Image?

- A. Review any PE files that WildFire determined to be malicious
- B. Ensure the latest content updates are installed
- C. Run the VDI conversion tool

- D. Set the memory dumps to manual setting

**Answer: A**

### NEW QUESTION # 37

What must a customer deploy prior to collecting endpoint data in Cortex XSIAM?

- A. Playbook
- B. Broker VM
- C. External dynamic list
- **D. XDR agent**

**Answer: D**

Explanation:

25 web pages

As a Palo Alto Cortex Professional, I'll provide a detailed explanation for Question 118: What must a customer deploy prior to collecting endpoint data in Cortex XSIAM? along with the reasoning and references based on Palo Alto Networks' official documentation and product knowledge.

C). XDR Agent

Cortex XSIAM (Extended Security Intelligence and Automation Management) is an AI-driven security operations platform designed to centralize and automate security operations across an enterprise, including endpoint, network, cloud, and identity data. To collect endpoint data specifically, Cortex XSIAM relies on the Cortex XDR Agent, which is a lightweight software component installed on endpoints (such as laptops, desktops, or servers). This agent is responsible for gathering telemetry data, monitoring endpoint activity, and enforcing security policies, which are then sent to the Cortex XSIAM cloud for analysis, detection, and response.

Here's why the XDR Agent is the correct choice and why the other options do not apply:

Option A: Playbook

\* Explanation: A playbook in Cortex XSIAM (or its predecessor, Cortex XSOAR) is a predefined workflow that automates incident response tasks, such as investigating alerts or remediating threats.

While playbooks are critical for automation and orchestration, they are not involved in the initial collection of endpoint data.

Playbooks operate on data that has already been collected and ingested into the system. Therefore, deploying a playbook is not a prerequisite for collecting endpoint data.

\* Conclusion: Incorrect.

Option B: Broker VM

\* Explanation: The Broker VM is an optional component in the Cortex ecosystem that can be deployed to enhance connectivity and functionality, such as acting as a proxy for endpoints to communicate with the Cortex cloud, collecting logs, or running additional services. While it can facilitate data forwarding or log collection in certain scenarios (e.g., from third-party sources), it is not a mandatory requirement for collecting endpoint data directly from devices managed by Cortex XSIAM. The XDR Agent can communicate with the Cortex cloud independently without a Broker VM.

\* Conclusion: Incorrect.

Option C: XDR Agent

\* Explanation: The Cortex XDR Agent is the core component required to collect endpoint data in Cortex XSIAM. It is installed on supported endpoints (e.g., Windows, macOS, Linux, or Android devices) and performs several key functions:

\* Data Collection: Gathers detailed telemetry, including process execution, file activity, network connections, and system events.

\* Prevention: Blocks exploits, malware, and fileless attacks using AI-driven techniques.

\* Detection and Response: Provides real-time data to the Cortex cloud for advanced analytics and incident investigation. Without the XDR Agent deployed on endpoints, Cortex XSIAM cannot collect the necessary data to monitor, detect, or respond to endpoint-based threats. This makes it the essential prerequisite for endpoint data collection.

\* Conclusion: Correct.

Option D: External Dynamic List (EDL)

\* Explanation: An External Dynamic List (EDL) is a feature in Palo Alto Networks' ecosystem used to import and manage dynamic lists of indicators (e.g., IP addresses, URLs, or domains) for use in security policies or threat intelligence. While EDLs can enhance threat detection by providing additional context, they are not involved in the process of collecting endpoint data. They are a supplementary tool rather than a requirement for data collection.

\* Conclusion: Incorrect.

References from Palo Alto Networks:

\* Cortex XSIAM Datasheet (Palo Alto Networks):

\* "Cortex XSIAM unifies best-in-class security operations functions, including Endpoint Detection and Response (EDR)... The platform leverages the Cortex XDR Agent to prevent endpoint attacks and collect full telemetry for detection and response."

\* This highlights the XDR Agent's role as the mechanism for endpoint data collection.

- \* Cortex XSIAM Solution Brief (Palo Alto Networks):
- \* "XSIAM requires the deployment of the XSIAM Endpoint Agent to appropriate and compatible endpoints to collect telemetry and enforce security."
- \* This directly ties the agent to the data collection process.
- \* Cortex XDR Agent Documentation (Palo Alto Networks Cortex Documentation Portal):
- \* The agent is described as "a lightweight agent that stops threats with Behavioral Threat Protection, AI, and cloud-based analysis while collecting endpoint telemetry for extended detection and response."
- \* Available at: docs-cortex.paloaltonetworks.com
- \* What is Cortex XSIAM? (Palo Alto Networks Website):
- \* "Endpoint Protection Platform (EPP): Prevents endpoint attacks with a proven endpoint agent that blocks exploits, malware, and fileless attacks and collects full telemetry for detection and response."
- \* This reinforces the agent's foundational role in endpoint data collection.

### NEW QUESTION # 38

When preparing for a Cortex XSOAR proof of value (POV), which task should be performed before the evaluation is requested?

- A. Planning for every different use case the customer has for the solution
- **B. Gathering a list of the different integrations that will need to be configured**
- C. Ensuring that the customer has single sign-on (SSO) configured in their environment
- D. Building out an executive-level proposal detailing the product capabilities

**Answer: B**

Explanation:

Before requesting a Cortex XSOAR proof of value (POV) evaluation, it's important to gather a list of the different integrations that will need to be configured. This ensures that the POV can be tailored to the customer's environment and use cases, and allows the evaluation to be based on real-world data and workflows.

### NEW QUESTION # 39

When a Demisto Engine is part of a Load-Balancing group it?

- A. Can be used separately as an engine, only if connected to the Demisto Server directly
- B. It must have port 443 open to allow the Demisto Server to establish a connection
- **C. Cannot be used separately and does not appear in the in the engines drop-down menu when configuring an integration instance**
- D. Must be in a Load-Balancing group with at least another 3 members

**Answer: C**

### NEW QUESTION # 40

An antivirus refresh project was initiated by the IT operations executive. Who is the best source for discussion about the project's operational considerations'?

- A. SOC manager
- B. endpoint manager
- **C. SOC analyst**
- D. desktop engineer

**Answer: C**

### NEW QUESTION # 41

.....

If you prefer to have your practice online, then you can choose us. PSE-Cortex PDF version is printable and you can print them into hard one and take some notes on them. In addition, PSE-Cortex exam dumps have free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy. You can receive your download link and password within ten minutes for

PSE-Cortex Exam Dumps. We have online and offline chat service stuff for PSE-Cortex exam materials, and if you have any questions, you can have a conversation with us, and we will give you reply as soon as we can.
