

100% Pass Adobe - AD0-E724 - Commerce Developer Professional—Trustable Popular Exams

BTW, DOWNLOAD part of Exams-boost AD0-E724 dumps from Cloud Storage: https://drive.google.com/open?id=1KKjC0-NVwJX_VccRecVbhiWNmo0reWli

Commerce Developer Professional Questions are Very Beneficial for Strong Preparation. The top objective of Exams-boost is to offer real Adobe Exam AD0-E724 exam questions so that you can get success in the AD0-E724 actual test easily. The Adobe Exam Commerce Developer Professional valid dumps by the Exams-boost are compiled by a team of experts. We have hired these AD0-E724 Exam professionals to ensure the top quality of our product. This team works together and compiles the most probable Commerce Developer Professional exam questions. So you can trust Adobe Exams Practice questions without any doubt.

To do this you just need to pass AD0-E724 exam, which is quite challenging and demands thorough Commerce Developer Professional (AD0-E724) exam preparation. For the complete, comprehensive and quick AD0-E724 Exam Preparation, the Exams-boost AD0-E724 Dumps questions are ideal. You should not ignore it and must try Exams-boost AD0-E724 exam questions for preparation today.

Standard AD0-E724 Answers & AD0-E724 Detailed Study Plan

All these three Adobe AD0-E724 exam questions formats are easy to use and perfectly work with all devices, operating systems, and the latest web browsers. The Commerce Developer Professional (AD0-E724) PDF dumps file is the collection of real and updated Commerce Developer Professional (AD0-E724) exam questions that are being presented in PDF format. You can install AD0-E724 Pdf Dumps file on your desktop computer, laptop, tab, or even on your smartphone devices. Just install the AD0-E724 PDF dumps file and start Commerce Developer Professional (AD0-E724) exam preparation anywhere and anytime.

Adobe Commerce Developer Professional Sample Questions (Q85-Q90):

NEW QUESTION # 85

When researching some issues with the indexer, an Adobe Commerce developer is seeing errors in the logs similar to Memory size allocated for the temporary table is more than 20% of innodb_buffer_pool_size. It is suggested that the client update innodb_buffer

er_pool_size or decrease the batch size value.

Why does decreasing the batch size value improve performance?

- A. This allows for a longer timeout per batch process.
- **B. This decreases memory usage for the temporary table.**
- C. This allows for more PHP threads to be utilized during the process.

Answer: B

Explanation:

Decreasing the batch size value improves performance by reducing the memory usage for the temporary table.

The batch size value determines how many rows of data are processed at a time by the indexer. A large batch size value can cause the allocated memory size for the temporary table to exceed 20% of innodb_buffer_pool_size, which can result in errors and slow down the indexing process. By lowering the batch size value, the indexer can process the data more efficiently and avoid memory issues. Verified References: [Magento 2.4 DevDocs] [Magento Stack Exchange] The error message regarding innodb_buffer_pool_size indicates that the temporary table's memory usage is high. Decreasing the batch size value directly reduces the number of rows processed in each batch, which in turn reduces the memory requirements for the temporary table.

* Impact of Batch Size on Memory Usage:

* The batch size determines how many records are processed at one time. By lowering the batch size, fewer records are processed, which reduces the amount of temporary table memory needed, alleviating the pressure on the InnoDB buffer pool.

* When the memory required by temporary tables exceeds the InnoDB buffer pool limit, MySQL might swap to disk, leading to slower performance and increased I/O.

* Why Option A is Correct:

* Reducing the memory footprint of temporary tables helps to prevent situations where memory constraints slow down or disrupt indexer operations.

* Options B and C are incorrect as they do not directly impact memory usage. Batch size adjustments do not affect timeout settings or PHP thread usage.

* Recommendations:

* In addition to adjusting the batch size, consider optimizing the innodb_buffer_pool_size setting based on server capacity to better handle larger operations if needed.

NEW QUESTION # 86

A developer has informed the Adobe Support team about a planned traffic surge on an Adobe Commerce Cloud project that will take place in a little over 48 hours.

What is an advantage of this prior notice?

- A. When the traffic arrives, extra server resources will be available.
- **B. The Support team will monitor the website during that time**
- C. The project will temporarily use an upgraded Fastly plan

Answer: B

Explanation:

Informing the Adobe Support team about a planned traffic surge allows them to monitor the website during that time. With prior notice, the support team can ensure that they are prepared to quickly respond to any issues that arise due to the surge. While extra server resources or an upgraded Fastly plan may be possible outcomes, the primary advantage of advance notice is proactive monitoring and support during expected high traffic events.

NEW QUESTION # 87

Which two attribute input types can be used for a date? (Choose two.)

- A. Timezone
- **B. Date**
- C. Schedule
- **D. Date and Time**

Answer: B,D

Explanation:

The two attribute input types that can be used for a date are Date and Time and Date. These input types allow the user to select a date or a date and time from a calendar widget.

The Timezone and Schedule input types do not exist in Adobe Commerce.

Verified References: [Adobe Commerce User Guide - Create a product attribute] In Magento, attribute input types define the type of data an attribute can hold and how it should be inputted or displayed in the UI. For dates, Magento provides specific input types to handle date-related data efficiently.

The "Date" input type is used for attributes that require only a date, without a time component, suitable for birthdays, anniversaries, or any date-specific information. The "Date and Time" input type, on the other hand, includes both date and time components, ideal for events, promotions, or any scenario where the time of day is relevant. These input types ensure data consistency and provide a user-friendly interface for selecting dates and times.

NEW QUESTION # 88

An integration named Marketing is created on the Adobe Commerce instance. The integration has access on Magento_Customer::customer resources and the access token is xxxxxx.

How would the rest API be called to search the customers?

- A. Type: application/json'
Use the admin token as Bearer
`curl -X GET https://magentourl/rest/V1/customers/search?searchCriteria... -H 'Authorization: Bearer YYYYYYY'`
- B. Passing integration name and access token as http auth credentials:
`curl -X GET https://Marketing:XXXXXX(Sl)magentourl/rest/V1/customers/search?5earchCriteria . . .`
Using integration name as username and access token as password, get the admin token (yyyyyy) via:
`curl -X POST https://magentourl/rest/V1/integration/admin/token -d '{"username":"Marketing", "password":"XXXXXX"}' -H 'Content-`
- C. Using the integration access token as Bearer:
`curl -X GET https://magentourl/rest/V1/customers/search?searchCriteria... -H 'Authorization: Bearer XXXXXXX'`

Answer: C

Explanation:

When using an integration token to access Magento's REST API, you can authenticate requests by including the token in the Authorization header as a Bearer token. This allows the system to recognize the permissions assigned to the integration and grant access to the specified resources.

* Using the Access Token as Bearer Token:

* In Magento, integration tokens are treated as Bearer tokens for API authentication. Once the token is generated, you can directly use it in the Authorization header.

* The access token XXXXXX will provide access to resources allowed by the Magento_Customer::customer permission.

* Why Option A is Correct:

* Option A shows the correct way to authenticate an API call using a pre-existing integration token by setting the header Authorization: Bearer XXXXXX. This is a straightforward way to search for customers without additional steps.

* Options B and C describe methods that are not necessary for this scenario. The access token already has the necessary permissions, so there's no need to re-authenticate or obtain an admin token.

* Example Command:

```
curl -X GET "https://magentourl/rest/V1/customers/search?searchCriteria[filterGroups][0][filters][0][field]=email&searchCriteria[filterGroups][0][filters][0][value]=example@example.com" -H "Authorization: Bearer XXXXXX"
```

NEW QUESTION # 89

What does a URL Rewrite do?

- A. It changes the way a URL appears in the browser
- B. It updates the URL to a domain that is not being Indexed.
- C. It updates the URL that is stored on the server.

Answer: A

Explanation:

A URL Rewrite in Magento changes the way a URL appears in the browser. This is particularly useful for improving the readability

and SEO of a URL. For example, a URL rewrite can be used to transform a long and complex URL into a shorter and more user-friendly version. It's important to note that while a URL rewrite changes the URL's appearance in the browser, it doesn't change the actual location of the resource on the server. This distinction is crucial for understanding how Magento handles URL rewrites and redirects, facilitating a more intuitive navigation structure within the store without altering the underlying server resources.

NEW QUESTION # 90

.....

If you buy our Software version of the AD0-E724 study questions, you can enjoy the similar real exam environment for that this version has the advantage of simulating the real exam. In addition, the software version of our AD0-E724 learning guide is not limited to the number of the computer. As long as you use it on the Windows system, then you can enjoy the convenience of this version brings. So do not hesitate and buy our Software version of AD0-E724 Preparation exam, you will benefit a lot from it.
