**100% Pass 2025 Adobe AD0-E725: Adobe Commerce Developer Expert –The**

## Best Lead2pass Review

PrepAwayPDF is one of the leading platforms that has been helping Adobe Exam Questions candidates for many years. Over this long time, period the Adobe Commerce Developer Expert (AD0-E725) exam dumps helped countless Adobe Commerce Developer Expert (AD0-E725) exam questions candidates and they easily cracked their dream Adobe AD0-E725 Certification Exam. You can also trust Adobe Commerce Developer Expert (AD0-E725) exam dumps and start Adobe Commerce Developer Expert (AD0-E725) exam preparation today.

### Adobe Commerce Developer Expert Sample Questions (Q46-Q51):

#### NEW QUESTION # 46

A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: `git checkout -b <branch-name>` The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. `git branch -b <branch-name>` should be used instead of Git checkout.
- B. `magento-cloud environment:redeploy --no-wait` should be executed after branch creation.
- C. `magento-cloud environment:branch <branch-name>` should be used instead of Git commands.

**Answer: C**

#### NEW QUESTION # 47

A Developer connects to the Magento-Cloud CLI and creates a new branch for environment using the following Git command: `git checkout -b <branch-name>`

The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. `git branch -b <branch-name>` should be used instead of Git checkout.
- B. `magento-cloud environment:redeploy --no-wait` should be executed after branch creation.
- C. `magento-cloud environment:branch <branch-name>` should be used instead of Git commands.

**Answer: C**

Explanation:

In Adobe Commerce Cloud, simply creating a Git branch locally does not automatically create a corresponding Cloud environment. The correct way is to use:

`magento-cloud environment:branch <branch-name>`

This ensures the environment is created in Cloud, builds automatically, and is linked to the new Git branch.

B redeploys an existing environment but does not create one.

C is just another Git command and does not activate the environment.

#### NEW QUESTION # 48

A Developer applies multiple quality patches to an Adobe Commerce Cloud store. After deployment, the Developer discovers that one of the patches is causing issues.

What is the correct procedure to safely remove or revert the problematic quality patch?

- A. Execute command in `magento-cloud.php /vendor/bin/ecc-patches:revert <patch-id>`.
- B. Delete the quality patch from the file `magento.env.yaml`.
- C. Delete the quality patch from the file `magento.app.yaml`.

**Answer: A**

#### NEW QUESTION # 49

A Developer is tasked with creating a new index. The custom indexer is not automatically updating the product data. How should the Developer solve this issue?

- A. Implement custom database triggers.
- **B. Use the mview to allow tracking database changes.**
- C. Use an event observer to monitor data changes.

**Answer: B**

#### NEW QUESTION # 50

A customer wants to create a set of CMS blocks to be used on their website but does not wish to create these manually. An Adobe Commerce Developer is tasked to install the CMS blocks programmatically. How should the Developer achieve this?

- A. Implement the SchemaSetupInterface, then use the block repository in the apply() function to create the blocks.
- B. Implement the InstallSchemaInterface, then use the block repository in the execute() function to create the blocks.
- **C. Implement the DataPatchInterface, then use the block repository in the apply() function to create the blocks.**

**Answer: C**

Explanation:

The correct approach for creating CMS blocks programmatically is to use a Data Patch (DataPatchInterface).

Data Patches are used for creating or modifying data programmatically (e.g., CMS blocks, CMS pages, configuration values). InstallSchemaInterface (B) and SchemaSetupInterface (C) are used for modifying database schema, not data.
