EMC Dell Unity Deploy 2023 Exam Sample Questions (Q283-Q288):

NEW QUESTION # 283

What is a benefit of Dell EMC Unity XT file-level retention?

- A. Enables throughput and bandwidth throttling
- B. Improves access to data resident on the drive tiers
- C. Protects data from deletion or modification
- D. Reduces time to rebuild a failed drive

Answer: C

NEW QUESTION # 284

What does the Dell Unity XT system do after a NAS server starts outbound traffic to an external service?

- A. Uses the active production interface
- B. Uses Packet Reflect for outbound communication
- C. Creates an active interface buffer cache in DRAM
- D. Selects interfaces that are based on advance static routes

Answer: B

Explanation:

Packet Reflect is a feature that enables the Dell Unity XT system to use the same interface for outbound communication that was used for inbound communication. This feature is useful when the Dell Unity XT system needs to initiate outbound traffic to an external service, such as DNS, NTP, LDAP, or SMTP. By using Packet Reflect, the Dell Unity XT system can avoid routing issues, firewall restrictions, or network address translation problems that may occur when using a different interface for outbound communication.

When a NAS server starts outbound traffic to an external service, the Dell Unity XT system uses Packet Reflect to send the packets through the same interface that received the packets from the external service.

Therefore, the correct answer is D. Uses Packet Reflect for outbound communication. References:
