

100% Pass CDCP - The Best Valid Exam Certified Data Centre Professional (CDCP) Practice

BONUS!!! Download part of Itcertkey CDCP dumps for free: https://drive.google.com/open?id=1Dnmp7GKT5w9Jis-hpJNgVbH_sniDelAv

Itcertkey's EXIN CDCP exam training materials' simulation is particularly high. You can encounter the same questions in the real exam. This only shows that the ability of our IT elite team is really high. Now many ambitious IT staff to make their own configuration files compatible with the market demand, to realize their ideals through these hot IT exam certification. Achieved excellent results in the EXIN CDCP Exam. With the EXIN CDCP exam training of Itcertkey, the door of the dream will open for you.

Our CDCP training guide has been well known in the market. Almost all candidates know our CDCP exam questions as a powerful brand. Once their classmates or colleagues need to prepare an exam, they will soon introduce them to choose our CDCP Study Materials. So our study materials are helpful to your preparation of the CDCP exam. As a matter of fact, we receive thousands of the warm feedbacks to thank us for helping them pass the exam.

Pass CDCP Exam with Authoritative Valid Exam CDCP Practice by Itcertkey

The latest CDCP exam prep is created by our IT experts and certified trainers who are dedicated to EXIN braindumps pdf for a long time. All questions of our CDCP PDF VCE are written based on the real questions. Besides, we always check the updating of CDCP exam questions to make sure exam preparation smoothly.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q39-Q44):

NEW QUESTION # 39

What is the effect of a high relative humidity in the data centre?

- A. In a data centre environment relative humidity is not important, only temperature matters.
- B. There is a risk of electrostatic discharge.
- **C. There is a risk of corrosion.**
- D. There is a risk of not properly functioning of the smoke detectors.

Answer: C

Explanation:

High relative humidity in a data center can lead to corrosion of metal parts and electronic contacts, potentially causing failures.

Electrostatic discharge is a risk with low humidity, not high.

NEW QUESTION # 40

What is the main difference between an Environmental Monitoring System (EMS) and a Building Management System (BMS)?

- A. A BMS only operates as a stand-alone system. An EMS can be configured as a redundant system.
- B. An EMS provides local alarms. A BMS provides both local and remote alarms.
- C. A BMS is only able to monitor dry contacts (on/off). An EMS can also monitor analog values.
- **D. An EMS monitors only. A BMS monitors and controls.**

Answer: D

Explanation:

The main difference between an Environmental Monitoring System (EMS) and a Building Management System (BMS) is that an EMS monitors only, while a BMS monitors and controls. An EMS is a system that collects and records data from various sensors and devices that measure environmental parameters, such as temperature, humidity, air quality, power, and water. An EMS provides alerts and reports based on the data, but it does not control or adjust the environmental conditions. A BMS is a system that integrates and manages various building systems, such as HVAC, lighting, security, fire, and access. A BMS not only monitors the data from these systems, but also controls and optimizes them to achieve the desired performance and efficiency. A BMS can also communicate with an EMS to receive data and provide feedback.

NEW QUESTION # 41

Which one of the following is an Audible Signaling and Notification Device?

- A. Strobes
- **B. Sirens**
- C. Alarms
- D. Clocks

Answer: B

Explanation:

According to the CDCP® Preparation Guide, an audible signaling and notification device is a device that produces a sound to alert or notify the occupants of a data center of an event or condition. Sirens are examples of such devices, as they can emit loud and distinctive tones to warn of fire, emergency, or security incidents.

Strobes, on the other hand, are visual signaling and notification devices that produce flashes of light to attract attention or convey information. Alarms and clocks are not specific types of devices, but rather general terms that can refer to various audible or visual devices.

NEW QUESTION # 42

Which Class of Fires involves ordinary combustible materials such as paper, wood and cloth?

- A. Class D
- **B. Class A**
- C. Class B
- D. Class K

Answer: B

Explanation:

According to the CDCP® Preparation Guide, Class A fires involve ordinary combustible materials such as paper, wood and cloth. These materials leave behind ash or embers when they burn. Class A fires can be extinguished by water or other cooling agents that reduce the temperature of the fuel below its ignition point.

NEW QUESTION # 43

What is the recommended level of Common Mode Noise (CMN)?

- A. > 10 Volt measured at the rack level
- B. > 5 Volt measured at the rack level
- C. CMN has no effect on ICT equipment so any level is ok
- **D. Preferred to be < 1 Volt with a maximum of 3 Volt**

Answer: D

Explanation:

As per Certified Data Centre Professional (CDCP) reference materials, Common Mode Noise (CMN) is a type of electrical noise that appears equally on the line and neutral wires with respect to ground, and it can negatively affect sensitive ICT equipment. Excessive CMN at the rack level can lead to data errors, communication problems, equipment malfunctions, or even hardware damage.

The CDCP training and the official exam preparation guide specify that the preferred level of Common Mode Noise at the rack should be less than 1 Volt, and under no circumstances should it exceed 3 Volts.

Keeping CMN at these levels helps ensure the stable and reliable operation of critical data center infrastructure. Higher CMN levels indicate grounding or bonding issues, or possibly interference from electrical or mechanical sources, and must be addressed promptly.

Options A and B (CMN above 5 or 10 Volts) are not acceptable and would present a serious risk to ICT equipment operation and data integrity. Option D is incorrect, as CMN absolutely does affect ICT equipment.
