NEW QUESTION #94

Refer to the exhibit.

An engineer must prevent the R6 loopback from getting into Area 2 and Area 3 from Area 0 Which action must the engineer take?

- A. Apply a fitter list inbound on R2 and R9
- B. Apply a filter list outbound on R3 and R7
- C. Apply a filter list inbound on R3 and R7
- D. Apply a filter list outbound on R7 only.

Answer: D

Explanation:

To prevent R6's loopback address from being advertised into Area 2 and Area 3 from Area 0, the most effective method is to apply a filter list outbound on R7. This is because R7 acts as the ABR (Area Border Router) connecting Area 0 to both Area 2 and Area 3. By filtering the routes outbound on R7, we can control which routes are allowed to be advertised into the connected areas, thus preventing the specific route (R6's loopback) from being propagated.
