156-587 Valid Test Sample & 156-587 Latest Material

If you are looking to advance in the fast-paced and technological world, CheckPoint is here to help you achieve this aim. CheckPoint provides you with the excellent Check Point Certified Troubleshooting Expert - R81.20 practice exam, which will make your dream come true of passing the CheckPoint 156-587 Certification Exam.

CheckPoint 156-587 Exam Syllabus Topics:

Topic	Details
Topic 1	• Advanced Access Control Troubleshooting: This section of the exam measures the skills of Check Point System Administrators in demonstrating expertise in troubleshooting access control mechanisms. It involves understanding user permissions and resolving authentication issues.
Topic 2	• Advanced Gateway Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and addresses troubleshooting techniques specific to gateways. It includes methods for diagnosing connectivity issues and optimizing gateway performance.

Topic 3	• Advanced Identity Awareness Troubleshooting: This section of the exam measures the skills of heck Point Security Consultants and focuses on troubleshooting identity awareness systems.
Topic 4	• Advanced Site-to-Site VPN Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and covers troubleshooting site-to-site VPN connections.
Topic 5	• Advanced Firewall Kernel Debugging: This section of the exam measures the skills of Check Point Network Security Administrators and focuses on kernel-level debugging for firewalls. Candidates will learn how to analyze kernel logs and troubleshoot firewall-related issues at a deeper level.
Topic 6	• Advanced Troubleshooting with Logs and Events: This section of the exam measures the skills of Check Point Security Administrators and covers the analysis of logs and events for troubleshooting. Candidates will learn how to interpret log data to identify issues and security threats effectively.
Topic 7	• Advanced Client-to-Site VPN Troubleshooting: This section of the exam measures the skills of CheckPoint System Administrators and focuses on troubleshooting client-to-site VPN issues.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q69-Q74):

NEW QUESTION # 69
You run a free-command on a gateway and notice that the Swap column is not zero Choose the best answer

- A. Swap file is used regularly because RAM memory is reserved for management traffic
- B. Utilization of ram is high and swap file had to be used
- C. Swap memory is used for heavy connections when RAM memory is full
- D. Its ole Swap is used to increase performance

Answer: B

NEW QUESTION # 70
The management configuration stored in the Postgres database is partitioned into several relational database domains. What is the purpose of the Global Domain?

- A. Global Domains is used by the IPS software blade to map the IDs to the corresponding countries according to the IpToCountry.csv file.
- B. This domain is used as the global database for MDSM and contains global objects and policies.
- C. This domain is used as the global database to back up the objects referencing the corresponding object attributes from the System Domain.
- D. This domain is used as the global database to track the changes made by multiple administrators on the same objects prior to publishing.

Answer: B

NEW QUESTION # 71
VPNs allow traffic to pass through the Internet securely by encrypting the traffic as it enters the VPN tunnel and decrypting the traffic as it exits. Which process is responsible for Mobile VPN connections?

- A. vpnk
- B. vpnk: This refers to VPN kernel-level operations and modules (e.g., handling the actual encryption/decryption of traffic processed by IPsec SAs). It is not the user-space daemon that manages Mobile VPN sessions and policies.
- C. fwk
- D. vpnd
- E. cvpnd

Answer: E

Explanation:
Therefore, cvpnd is the specific process dedicated to managing Mobile VPN connections within the Check Point architecture.
Reference (based on official Check Point documentation naming and functionality):
Check Point R81.20 CLI Reference Guide (details for cvpnd_admin).
Check Point R81.20 Administration Guides (sections discussing Mobile Access architecture and daemons).
Commonly known Check Point process lists available in CCTE study materials.
Explanation:
The Check Point process responsible for Mobile VPN connections, particularly those associated with the Mobile Access Software Blade (which includes SSL VPN and clientless access), is cvpnd (Connectra VPN Daemon).
Exact Extracts and Supporting Information:
Check Point CLI Reference Guide (for cvpnd_admin):
"cvpnd_admin. Description. Changes the behavior of the Mobile Access cvpnd process." This command utility directly interacts with cvpnd for Mobile Access functionalities.
Check Point Daemon Lists (e.g., from "tech :: stuff - Checkpoint Daemons and Processes Explained" or similar CCTE R81.20 documentation):
Under the "Mobile Access Blade" section, CVPND is typically listed as:"CVPND - Connectra VPN Daemon. Main daemon for the Mobile Access Software Blade." It's also often noted that the cpwd_admin list command (Check Point WatchDog) shows this process as "CVPND".
Commands like cvpnstart and cvpnstop are used to manage this daemon.
Exam Preparation Materials (e.g., ExamTopics for 156-586):
A question directly asking "Which process is responsible for Mobile VPN connections?" with options including cvpnd, vpnk, fwk, and vpnd, typically indicates cvpnd as the correct answer.
Explanation of other options:
B : fwk: This is a general suffix often related to firewall worker processes or kernel modules, not a specific high-level daemon for Mobile VPN.
C : vpnd: This is the main VPN daemon, primarily responsible for site-to-site IPsec VPNs and some traditional IPsec remote access clients. While it handles VPN functions, cvpnd is specialized for Mobile Access.

NEW QUESTION # 72
Which of the following inputs is suitable for debugging HTTPS inspection issues?

- A. vpn debug cptls on
- B. fw diag debug tls enable
- C. fw ctl debug -m fw + conn drop cptls
- D. fw debug tls on TDERROR_ALL_ALL=5

Answer: C

NEW QUESTION # 73
When debugging is enabled on firewall kernel module using the fw ctl debug' command with required options, many debug messages are provided by the kernel that help the administrator to identify Issues. Which of the following is true about these debug messages generated by the kernel module?

- A. Messages are written to SFWDIR
- B. Messages are written to /etc/dmesg file
- C. Messages are written to a buffer and collected using 'fw ctl kdebug
- D. Messages are written to console and also /var/log/messages file

Answer: C

NEW QUESTION # 74
......

When you are studying for the 156-587 exam, maybe you are busy to go to work, for your family and so on. How to cost the less time to reach the goal? It's a critical question for you. Time is precious for everyone to do the efficient job. If you want to get good 156-587 prep guide, it must be spending less time to pass it. Exactly, our product is elaborately composed with major questions and answers. We are choosing the key from past materials to finish our 156-587 Guide Torrent. It only takes you 20 hours to 30 hours

to do the practice. After your effective practice, you can master the examination point from the 156-587 exam torrent. Then, you will have enough confidence to pass it.
