

100% Pass IAPP - AIGP–Reliable Exam Pass Guide

Useful Study Guide & Exam Questions to Pass the IAPP AIGP Exam

Solve IAPP AIGP Practice Tests to Score High!

www.CertFun.com
Here are all the necessary details to pass the AIGP exam on your first attempt. Get rid of all your worries now and find the details regarding the syllabus, study guide, practice tests, books, and study materials in one place. Through the AIGP certification preparation, you can learn more on the IAPP Certified Artificial Intelligence Governance Professional, and getting the IAPP Certified Artificial Intelligence Governance Professional (AIGP) certification gets easy.

DOWNLOAD the newest Actual4test AIGP PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1po8FruTkIYhe_3PCjdb4z3slm1vlagBM

The clients only need 20-30 hours to learn the AIGP exam questions and prepare for the test. Many people may complain that we have to prepare for the AIGP test but on the other side they have to spend most of their time on their most important things such as their jobs, learning and families. But if you buy our AIGP Study Guide you can both do your most important thing well and pass the test easily because the preparation for the test costs you little time and energy.

IAPP AIGP Exam Syllabus Topics:

Topic	Details
Topic 1	Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.

Topic 2	• Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.
Topic 3	• Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.
Topic 4	• Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.

IAPP AIGP Latest Training & New AIGP Test Prep

With the pass rate of more than 98%, our AIGP training materials have gained popularity in the market. We also pass guarantee and money back guarantee for you fail to pass the exam by using the AIGP exam dumps, or you can replace other 2 valid exam dumps, at the same time, you can also get the free update for AIGP Training Materials. In addition, we use the international recognition third party for payment, therefore your money safety is guaranteed. We support online payment with credit card.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q153-Q158):

NEW QUESTION # 153

Random forest algorithms are in what type of machine learning model?

- A. Natural language processing.
- B. Symbolic.
- **C. Discriminative.**
- D. Generative.

Answer: C

Explanation:

Random forest algorithms are classified as discriminative models. Discriminative models are used to classify data by learning the boundaries between classes, which is the core functionality of random forest algorithms.

They are used for classification and regression tasks by aggregating the results of multiple decision trees to make accurate predictions.

Reference: The AIGP Body of Knowledge explains that discriminative models, including random forest algorithms, are designed to distinguish between different classes in the data, making them effective for various predictive modeling tasks.

NEW QUESTION # 154

A company plans on procuring a tool from an AI provider for its employees to use for certain business purposes. Which contractual provision would best protect the company's intellectual property in the tool, including training and testing data?

- A. The provider will warrant that the tool will work as intended.
- B. The provider will give privacy notice to individuals before using their personal data to train or test the tool.
- C. The provider will obtain and maintain insurance to cover potential claims.
- **D. The provider will defend and indemnify the company against infringement claims.**

Answer: D

Explanation:

To protect the company's intellectual property, the most pertinent contractual provision is ensuring that the AI provider will defend and indemnify the company against infringement claims. This clause means the provider will take responsibility for any intellectual property disputes that arise, thereby safeguarding the company from potential legal and financial repercussions related to the use of the tool. Other options, while beneficial, do not directly address the protection of intellectual property. This concept is detailed in the contractual best practices section of the IAPP AIGP Body of Knowledge.

NEW QUESTION # 155

A company is creating a mobile app to enable individuals to upload images and videos, and analyze this data using ML to provide lifestyle improvement recommendations. The signup form has the following data fields:

1. First name
2. Last name
3. Mobile number
4. Email ID
5. New password
6. Date of birth
7. Gender

In addition, the app obtains a device's IP address and location information while in use.

What GDPR privacy principles does this violate?

- A. Integrity and Confidentiality.
- B. Transparency and Accuracy.
- **C. Purpose Limitation and Data Minimization.**
- D. Accountability and Lawfulness.

Answer: C

Explanation:

The GDPR privacy principles that this scenario violates are Purpose Limitation and Data Minimization.

Purpose Limitation requires that personal data be collected for specified, explicit, and legitimate purposes and not further processed in a manner that is incompatible with those purposes. Data Minimization mandates that personal data collected should be adequate, relevant, and limited to what is necessary in relation to the purposes for which they are processed. In this case, collecting extensive personal information (e.g., IP address, location, gender) and potentially using it beyond the necessary scope for the app's functionality could violate these principles by collecting more data than needed and possibly using it for purposes not originally intended.

NEW QUESTION # 156

Which of the following steps occurs in the design phase of the AI life cycle?

- A. Performance evaluation.
- B. Data augmentation.
- **C. Risk impact estimation.**
- D. Model explainability.

Answer: C

Explanation:

Risk impact estimation occurs in the design phase of the AI life cycle. This step involves evaluating potential risks associated with the AI system and estimating their impacts to ensure that appropriate mitigation strategies are in place. It helps in identifying and

addressing potential issues early in the design process, ensuring the development of a robust and reliable AI system. Reference: AIGP Body of Knowledge on AI Design and Risk Management.

NEW QUESTION # 157

CASE STUDY

Please use the following answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveilling the public sites in order to identify individuals that are likely to have committed a crime. It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

When notifying an accused perpetrator, what additional information should a police officer provide about the use of the AI system?

- **A. Information about how the individual was identified by the AI system.**
- B. Information about the composition of the training data of the system.
- C. Information about how the accused can oppose the charges.
- D. Information about the accuracy of the AI system.

Answer: A

Explanation:

When notifying an accused perpetrator, the police officer should provide information about how the individual was identified by the AI system. This transparency is crucial for maintaining trust and ensuring that the accused understands the basis of the charges against them. Information about the accuracy, how to oppose the charges, and the composition of the training data, while potentially relevant, do not directly address the immediate need for the accused to understand the specific process that led to their identification.
