ISC Certified Cloud Security Professional Sample Questions (Q756-Q761):

NEW QUESTION # 756

Which aspect of cloud computing serves as the biggest challenge to using DLP to protect data at rest?

- A. Reversibility
- B. Interoperability
- C. Portability
- **D. Resource pooling**

Answer: D

Explanation:
Explanation

Resource pooling serves as the biggest challenge to using DLP solutions to protect data at rest because data is spread across large systems, which are also shared by many different clients. With the data always moving and being distributed, additional challenges for protection are created versus a physical and isolated storage system. Portability is the ability to easily move between different cloud providers, and interoperability is focused on the ability to reuse components or services. Reversibility pertains to the ability of a cloud customer to easily and completely remove their data and services from a cloud provider.

NEW QUESTION # 757

With a cloud service category where the cloud customer is provided a full application framework into which to deploy their code and services, which storage types are MOST likely to be available to them?

- A. Structured and unstructured
- B. Volume and object
- C. Volume and database
- D. Structured and hierarchical

Answer: A

Explanation:

The question is describing the Platform as a Service (PaaS) cloud offering, and as such, structured and unstructured storage types will be available to the customer. Volume and object are storage types associated with IaaS, and although the other answers present similar-sounding storage types, they are a mix of real and fake names.

NEW QUESTION # 758

Which data point that auditors always desire is very difficult to provide within a cloud environment?

- A. Access policy
- B. Privacy statement
- C. Baselines
- D. Systems architecture

Answer: D

Explanation:

Explanation

Cloud environments are constantly changing and often span multiple physical locations. A cloud customer is also very unlikely to have knowledge and insight into the underlying systems architecture in a cloud environment. Both of these realities make it very difficult, if not impossible, for an organization to provide a comprehensive systems design document.

NEW QUESTION # 759

Which of the following could be used as a second component of multifactor authentication if a user has an RSA token?

- A. Retina scan
- B. Access card
- C. RFID
- D. USB thumb drive

Answer: A

Explanation:

A retina scan could be used in conjunction with an RSA token because it is a biometric factor, and thus a different type of factor. An access card, RFID, and USB thumb drive are all items in possession of a user, the same as an RSA token, and as such would not be appropriate.

NEW QUESTION # 760

Which of the following should occur at each stage of the SDLC?

- Answer: C**
