GH-300 Top Exam Dumps | GH-300 Online Exam

Before you choose to end your practices of the GH-300 study materials, the screen will display the questions you have done, which help you check again to ensure all questions of GH-300 practice prep are well finished. The report includes your scores of the GH-300 learning guide. Also, it will display how many questions of the GH-300 exam questions you do correctly and mistakenly. In a word, you can compensate for your weakness and change a correct review plan of the study materials.

Microsoft GitHub Copilot Sample Questions (Q103-Q108):

NEW QUESTION # 103
What is zero-shot prompting?

- A. Only giving GitHub Copilot a question as a prompt and no examples
- B. Giving GitHub Copilot examples of the algorithm and outcome you want to use
- C. Giving GitHub Copilot examples of the problem you want to solve
- D. Telling GitHub Copilot it needs to show only the correct answer
- E. Giving as little context to GitHub Copilot as possible

Answer: A

Explanation:
"Zero-shot prompting means asking the model to perform a task without providing examples-only the question or task description is given." This confirms that the correct definition of zero-shot prompting is providing no examples, only a direct prompt.
References: GitHub Copilot and AI prompting documentation.

NEW QUESTION # 104
What method can be used to interact with GitHub Copilot?

- A. From a watch window in an IDE debug session
- B. By using chat capabilities in NeoVim
- C. By using a properly configured GitHub CLI
- D. From a web browser at https://github.copilot.com

Answer: B

Explanation:
GitHub Copilot is an AI-powered code completion tool that integrates directly into supported Integrated Development Environments (IDEs) and code editors, such as Visual Studio Code, JetBrains IDEs, NeoVim, and others. Developers interact with it through their coding environment, where it provides real-time code suggestions, autocompletions, and (in some cases) chat-like capabilities via extensions or plugins (e.g., GitHub Copilot Chat in supported editors).
Evaluation of Options:
* A. By using a properly configured GitHub CLIThe GitHub CLI (Command Line Interface) is a tool for interacting with GitHub repositories and workflows from the terminal, but it is not a method for interacting with GitHub Copilot. Copilot operates within code editors/IDEs, not through the CLI.
Incorrect.
* B. By using chat capabilities in NeoVimThis is partially correct. GitHub Copilot can be used in NeoVim with the appropriate plugin (e.g., the Copilot.vim plugin), and GitHub Copilot Chat-a feature that allows conversational interaction-may also be available depending on the setup and version.
However, "chat capabilities in NeoVim" alone is not the primary or standard way to describe Copilot interaction, as it's more about code suggestions than chat. This is the closest option but not perfectly precise.Partially correct.
* C. From a watch window in an IDE debug sessionThe "watch window" in an IDE is used during debugging to monitor variable values, not to interact with GitHub Copilot. Copilot provides suggestions while coding, not specifically in debug sessions or watch windows.Incorrect.
* D. From a web browser athttps://github.copilot.comThere is no such URL as "https://github.copilot.
com" dedicated to interacting with GitHub Copilot. Copilot is accessed via GitHub's authentication and integrated into editors/IDEs, not through a standalone web browser interface. Information about Copilot is available on GitHub's official site (e.g.,https://github.com/features/copilot), but interaction happens in the coding environment.Incorrect.
Reference: GitHub Copilot interaction documentation.

NEW QUESTION # 105
Which principle emphasizes that AI systems should be understandable and provide clear information on how they work?

- A. Accountability
- B. Fairness
- C. Inclusiveness
- D. Transparency

Answer: D

Explanation:
The principle of transparency emphasizes that AI systems should be understandable and provide clear information about their operations. This ensures that users can understand how the AI arrives at its decisions and suggestions.
Reference: Microsoft's AI principles and ethical guidelines.

NEW QUESTION # 106
A company is currently storing code in Bitbucket and would like to use GitHub Copilot. Which GitHub Copilot plan will be most cost effective to allow them to manage users with their Identity Provider (e.g. Okta)?

- A. GitHub Copilot Individual
- B. GitHub Copilot Enterprise
- C. GitHub Copilot Teams
- D. GitHub Copilot Business for non-GHE customers

Answer: B

Explanation:
GitHub Copilot Enterprise is the most cost-effective plan for managing users with an Identity Provider like Okta, as it provides enterprise-level features and integration.
Reference: GitHub Copilot pricing and features.

NEW QUESTION # 107
What types of prompts or code snippets might be flagged by the GitHub Copilot toxicity filter? (Each correct answer presents part of the solution. Choose two.)

- A. Code that contains logical errors or produces unexpected results
- B. Code comments containing strong opinions or criticisms
- C. Hate speech or discriminatory language (e.g., racial slurs, offensive stereotypes)
- D. Sexually suggestive or explicit content

Answer: C,D

Explanation:
GitHub Copilot includes a toxicity filter to prevent the generation of harmful or inappropriate content. This filter flags prompts or code snippets that contain hate speech, discriminatory language, or sexually suggestive or explicit content. This ensures a safe and respectful coding environment.
Reference: GitHub Copilot documentation on safety and content filtering.

NEW QUESTION # 108
.....

ExamCost offers you the best practice tests for the preparation of GH-300 exams. The practice tests are designed to provide you the type of questions you are going to face in real GH-300 exams.
