### Oracle Cloud Fusion Analytics Warehouse 2023 Implementation Professional Sample Questions (Q31-Q36):

#### NEW QUESTION # 31

During the creation of the FAW instance, you have to provide the Fusion Application connection details and authentication information.

Which method of authentication is recommended by Oracle?

- A. Multi-factor authentication
- **B. JSON Web Token**
- C. Password-based

**Answer: B**

Explanation:

Explanation

JSON Web Token (JWT) is the recommended method of authentication by Oracle for creating the FAW instance. JWT is a secure and self-contained way of transmitting information between parties as a JSON object. It is used to assert some number of claims

#### NEW QUESTION # 32

You are aware that a new FAW version just became available.

What is the best practice for upgrading a FAW instance to the latest version?

- A. Schedule the upgrade through the FAW console.
- B. Open an SR with Oracle.
- **C. Wait until Oracle upgrades the instance.**

**Answer: C**

Explanation:

Explanation

The best practice for upgrading a FAW instance to the latest version is to schedule the upgrade through the FAW console. You can use the Upgrade option on the Console page to select the available version and schedule a date and time for the upgrade. You can also view the status and history of your upgrades on the same page. You do not need to open an SR with Oracle or wait until Oracle upgrades the instance for this purpose.

#### NEW QUESTION # 33

FAW allows you to define custom data security to meet complex requirements.

What steps would you take to override the default data security for specific users?

- A. You must create reports for your target users with filters that meet your security requirements.
- B. You need to create a custom duty role and set up data filters that specify the values for specific dimensions.

- C. You need to create a custom data role and set up data filters that specify the values for specific dimensions.

**Answer: C**

Explanation:

Explanation

The steps that you would take to override the default data security for specific users are to create a custom data role and set up data filters that specify the values for specific dimensions. A custom data role allows you to define custom data security filters and apply them to dimensions, facts, or subject areas. You can then assign the custom data role to the users who need to have different data access than the default<sup>2</sup>. You do not need to create a custom duty role or create reports with filters to override the default data security.

#### NEW QUESTION # 34

You have reviewed out-of-the-box data security through the configuration of context assignment. You need to create custom data security to meet your data security requirements.

Which FAW settings provide this functionality?

- A. A combination of steps in Security Console and the Security Configurations in the Semantic Model Extensions available at the FAW Console provides this functionality.
- B. You need to modify the Data Security Assignment file with the values you want for the users.
- C. The Security Configurations available in the Semantic Model Extensions through the FAW Console provide this functionality

**Answer: A**

Explanation:

Explanation

To create custom data security to meet your data security requirements, you need a combination of steps in Security Console and the Security Configurations in the Semantic Model Extensions available at the FAW Console. The Security Console allows you to create custom data roles and assign them to users or groups<sup>5</sup>. The Security Configurations allow you to define custom security filters and apply them to dimensions, facts, or subject areas<sup>6</sup>. You do not need to use only the Security Configurations or modify the Data Security Assignment file for this purpose.

#### NEW QUESTION # 35

Your source Fusion Cloud Application instance has been refreshed with data from another environment.

You are using password-based authentication to connect from FAW.

What step would be required for the data pipeline to run without any issues'

- A. You need to update the notification email of the FAW instance with the email of the user identified to connect with the source Fusion Cloud Application.
- B. You are required to update the applicable users credentials, if the passwords differ between environments.
- C. You are required to update the source application URL.

**Answer: B**

Explanation:

Explanation

The step that would be required for the data pipeline to run without any issues after your source Fusion Cloud Application instance has been refreshed with data from another environment is to update the applicable users credentials, if the passwords differ between environments. You need to ensure that the FAWService user and any other users that are used for data extraction have valid credentials in both environments<sup>8</sup>. You do not need to update the source application URL or the notification email of the FAW instance for this purpose
