In the same time, you will do more than the people around you. This is what you can do with Sharing-and-Visibility-Architect Test Guide. Our Sharing-and-Visibility-Architect learning guide is for you to improve your efficiency and complete the tasks with a higher quality. You will stand out from the crowd both in your studies and your work. The high quality of Sharing-and-Visibility-Architect exam training is tested and you can be assured of choice.

To Pass Sharing-and-Visibility-Architect Exam, candidates must have a thorough understanding of the Salesforce platform, including its security model, sharing rules, role hierarchy, profiles, permissions, and groups. They must also be able to design and implement complex sharing architectures that meet the needs of their organizations, while ensuring data security and compliance.

To become a Salesforce Certified Sharing and Visibility Architect, candidates must pass a rigorous exam that tests their knowledge and skills in designing and implementing sharing and visibility solutions in Salesforce. Sharing-and-Visibility-Architect exam is designed to assess a candidate's ability to design and implement complex sharing rules, sharing sets, manual sharing, and other sharing and visibility features. Additionally, candidates must demonstrate their ability to design and implement custom security solutions, including field-level security, record-level security, and role hierarchy. Salesforce Certified Sharing and Visibility Architect certification is ideal for professionals who work as Salesforce architects, developers, or consultants, as well as those who are responsible for designing and implementing Salesforce solutions for their organizations.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q22-Q27):

NEW QUESTION # 22

Universal Containers (UC) delivers training in 500 different regions. The UC Operations Users team manage course setup, scheduling, and trainer setup. The Operations Users team members work at a regional level and report to an Operations manager. The Operations manager requested access to edit ALL scheduled courses owned by the Operation Users team. How can this be achieved?

- A. The Operations manager will get access to the scheduled courses by creating a public group and add the Operations manager and the Operations Users team to the public group
- B. The Operations manager will get access to the scheduled courses by creating an ownership-based sharing rule and share the scheduled courses with the Operations manager.
- C. The Operations manager will get access to the scheduled courses by granting the Operations manager modify ALL on scheduled courses.
- D. The Operations manager will get access to the scheduled courses owned by the Operations Users team defined in the role hierarchy.

Answer: D

NEW QUESTION # 23

Universal Containers (UC) has implemented Customer Community with customer community plus licenses for their distributors. Some distributors requested granting specific community users (agents) to view cases submitted by other agents of the same distributor.

Which feature only supports these requirements?

- A. Partner super user
- B. Delegate external user
- C. Permission set to grant community admin permission
- D. Partner community admin.

Answer: A

NEW QUESTION # 24

Universal Containers has a Performance Feedback custom object (Private organization-wide default) used by customers to report any Issues with delivery drivers. Feedback should not be visible to the driver, but any feedback records should be accessible to people above them in the Role Hierarchy, even when the driver changes managers. Assuming managers have Read access to the Feedback object, which three steps are necessary to solve these requirements?

- A. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver's manager when feedback is submitted, and use the Role Hierarchy to give access to a driver's manager.
- B. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver when feedback is submitted, and create an ownership-based sharing rule,
- C. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver when feedback is submitted, and use the Role Hierarchy to give access to 4 driver's manager.

Answer: B

Explanation:

Explanation

Removing Read permission on the Driver profile will prevent the driver from seeing any feedback records, regardless of ownership. Having feedback ownership transferred to the driver when feedback is submitted will not prevent the driver from seeing their own feedback records. Using the Role Hierarchy to give access to a driver's manager will not work if the driver changes managers, as the feedback records will still be owned by the previous manager. The best option is to create an ownership-based sharing rule that grants Read access to the feedback records owned by drivers in a specific role or public group to users in roles above them

NEW QUESTION # 25

The architect has a requirement to create a criteria-based sharing rule based on the customer Social. up the rule in Contact Sharing, the field is not shown on the list of available fields. What might cause this?

- A. fields with validation rules are not available for sharing rules.
- B. The architect's profile does not have field level Security (FLS) for this field.
- C. The architect does not have permission to Compliance fields.
- **D. The field has been configured for encryption.**

Answer: D

Explanation:

Explanation

The field has been configured for encryption, which might cause it to not show up on the list of available fields for creating a criteria-based sharing rule. Encrypted fields are not available for sharing rules, as they may contain sensitive data that should not be exposed. Option B is incorrect, since the architect does not need permission to Compliance fields to create a sharing rule. Option C is incorrect, since the architect's profile does not need field-level security for this field to create a sharing rule. Option D is incorrect, since fields with validation rules are available for sharing rules.

NEW QUESTION # 26

Universal Containers has just deployed a change to its role hierarchy. A manager is reporting that their staff can now see Accounts that they do not own and should not have access to. How should the Architect troubleshoot?

- A. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- B. While logged in as the one of the Staff members, navigate to their user record and inspect their profile and role membership.
- C. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- **D. While logged in as the one of the Staff members, navigate to a sample account and use the Sharing button to determine who has access.**

Answer: D

Explanation:

Explanation

To troubleshoot why staff members can see accounts that they do not own and should not have access to after a change in the role hierarchy, the architect should log in as one of the staff members, navigate to a sample account, and use the sharing button to determine who has access. The sharing button shows all the reasons why a user has access to a record, such as role hierarchy, sharing rules, manual sharing, teams, etc. The architect can then identify which sharing mechanism is causing the issue and fix it accordingly
