ITFAS-Level-1 Test Score Report | ITFAS-Level-1 Free Exam Dumps

Boring life will wear down your passion for life. It is time for you to make changes. Our ITFAS-Level-1 training materials are specially prepared for you. In addition, learning is becoming popular among all age groups. After you purchase our ITFAS-Level-1

Study Guide, you can make the best use of your spare time to update your knowledge. For we have three varied versions of our ITFAS-Level-1 learning questions for you to choose so that you can study at different conditions.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

At which height above the floor is the sound level measured for public and private mode audible devices?

- A. 5.0 feet (1.5 meters)
- B. 2.5 feet (0.7 meter)
- C. 7.5 feet (2.3 meters)
- D. 8.0 feet (2.4 meters)

Answer: A

Explanation:

Sound level readings for fire alarm audible notification appliances must be taken at a consistent, standardized height to ensure compliance with required dBA levels.

NFPA 72 (2022), Section 18.4.6.1:

"Sound pressure level measurements shall be taken with a sound level meter positioned 5 ft (1.5 m) above the floor in the area required to be served by the system." This applies to both public mode (e.g., schools, offices) and private mode (e.g., staff-only zones like hospitals).

Correct answer: B. 5.0 feet (1.5 meters)

NEW QUESTION # 52

Which activity is required at the semiannual inspection of notification appliances?

- A. Verify synchronization of strobes
- B. Verify location and condition
- C. Verify candela setting
- D. Verify flash rate

Answer: B

Explanation:

Semiannual visual inspection of notification appliances checks their physical condition, mounting, visibility, and labeling- not candela or flash rate.

NFPA 72 (2022), Table 14.3.1 - Visual Inspection Frequencies:

"Visible and audible notification appliances" # Frequency: Semiannually Method: Verify proper location and physical condition

Correct answer: C. Verify location and condition

NEW QUESTION # 53

Which three of the following are types of fire alarm control units? (Choose three.)

- A. Dedicated function
- B. Protected premises
- C. Central station
- D. Releasing service

Answer: A,B,D

Explanation:

NFPA 72 identifies several types of fire alarm control units (FACUs) based on their function and scope.

NFPA 72 (2022), Section 3.3.103 - Fire Alarm Control Unit (FACU):

* Dedicated Function FACU: Performs a specific fire alarm role (e.g., elevator recall or sprinkler monitoring).

* Protected Premises FACU: Installed on-site to monitor and signal within that building.

* Releasing Service FACU: Activates fire suppression systems like gas or foam.

"Central station" is a supervising station, not a control unit.

Correct answers:

- * Dedicated function
- * Protected premises
- * Releasing service

NEW QUESTION # 54

Within a fire alarm control unit, what is the maximum delay in seconds for alarm system responses after the initiation device has been activated?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

After an initiating device (like a smoke detector or pull station) is triggered, NFPA 72 limits how long the control unit can delay its response to initiating notification appliances and/or signal transmission.

NFPA 72 (2022), Section 10.11.1.1:

"Fire alarm and emergency alarm initiating devices shall be arranged to initiate the intended alarm or response within 10 seconds unless otherwise permitted. The total delay shall not exceed 30 seconds." Correct answer: C. 30 seconds

NEW QUESTION # 55

What is the maximum extended interval allowed for equipment to get inspected?

- A. 6 months
- B. 18 months
- **C. 12 months**
- D. 3 months

Answer: C

Explanation:

Inspection intervals are detailed in NFPA 72, Table 14.3.1, which outlines the maximum intervals for various components. Most fire alarm system components require inspection at least annually, which equals 12 months.

NFPA 72 (2022), Table 14.3.1 - Frequency of Inspection Tasks:

You'll see that the default maximum inspection interval for initiating devices, control equipment, and notification appliances is 12 months.

Unless specifically stated otherwise (e.g., by manufacturer instructions or performance-based design), you cannot exceed that.

Correct answer: C. 12 months

NEW QUESTION # 56

.....

This offline software works only on Windows computers and laptops. Test4Engine also offers up to 1 year of free updates, if for instance, the sections of real Inspection and Testing of Fire Alarm Systems Level I Exam examination changes after your purchase of the ITFAS-Level-1 practice test material.
