

100% Pass Nutanix - NCP-US-6.10 Perfect Practice Exam

What's more, part of that ValidDumps NCP-US-6.10 dumps now are free: https://drive.google.com/open?id=1biy_x8Bq_Eangpa54hyffTeGBEWUxnF0

We can confidently say that our NCP-US-6.10 training quiz will help you. First of all, our company is constantly improving our NCP-US-6.10 exam materials according to the needs of users. As you can see that there are three versions of our NCP-US-6.10 learning questions on our website for you to choose: the PDF, Software and APP online. As long as you have a try on our NCP-US-6.10 study prep, you will want our NCP-US-6.10 study materials to prepare for the exam for sure.

In order to meet customers' needs, our company will provide a sustainable updating system for customers. The experts of our company are checking whether our NCP-US-6.10 test quiz is updated or not every day. We can guarantee that our NCP-US-6.10 exam torrent will keep pace with the digitized world by the updating system. We will try our best to help our customers get the latest information about study materials. If you are willing to buy our NCP-US-6.10 Exam Torrent, there is no doubt that you can have the right to enjoy the updating system. More importantly, the updating system is free for you. Once our Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 exam dumps are updated, you will receive the newest information of our NCP-US-6.10 test quiz in time. So quickly buy our product now!

>> NCP-US-6.10 Practice Exam <<

NCP-US-6.10 Test Valid | Valid Test NCP-US-6.10 Experience

As to this fateful exam that can help you or break you in some circumstances, our company made these NCP-US-6.10 practice materials with accountability. We understand you can have more chances being accepted by other places and getting higher salary or acceptance. Our NCP-US-6.10 training materials are made by our responsible company which means you can gain many other benefits as well. We offer free demos for your reference, and send you the new updates if our experts make them freely.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q65-Q70):

NEW QUESTION # 65

An administrator is implementing two production networks for Nutanix Objects:

* Objects Storage Network (internal)

* Objects Public Network (external) In which two ways is it recommended the administrator configure these networks? (Choose two.)

- A. Objects Storage Network and Objects Public Network on the same Virtual Network.
- B. Objects Storage Network and Objects Public Network on different Virtual Networks.
- C. Objects Storage Network on a different network to the Controller VM (CVM).
- D. Objects Storage Network on the same network as the Controller VM (CVM).

Answer: B,C

Explanation:

Network isolation is critical for security and performance:

* Option C: Storage (internal) and Public (external) networks must be on separate VLANs/virtual networks to prevent unauthorized access to internal traffic.

* Option D: The Storage Network should be isolated from the CVM network to avoid AOS cluster interference.

* Incorrect:

* A: CVMs manage AOS storage; Objects Storage Network should not share this segment.

* B: Combining networks violates security best practices.

Reference:Nutanix Objects Deployment Guide:

"Place Objects Storage Network on a dedicated internal network, segregated from Public Networks and CVM traffic. Use distinct virtual networks for each."(Chapter: "Network Segmentation Best Practices")Nutanix NUSA Course:"Isolate Storage Network (backend) from Public Network (client-facing) and CVM network to ensure cluster stability and security."(Module: "Objects Network Design")

NEW QUESTION # 66

Refer to the exhibit.

The exhibit displays two screenshots of the Nutanix Firewall configuration interface. The top screenshot shows the 'OUTGOING' tab, and the bottom screenshot shows the 'INCOMING' tab. Both screenshots feature a table of services and their associated ports. The 'vSphere Web Client' service is highlighted with a red box in the bottom screenshot.

Service name	TCP ports	UDP ports	Allowed IP addresses
DVSSync	—	8301, 8302	
NFC	902	—	
DHCP Client	—	68	
Fault Tolerance	8300	—	
vSphere High Availability Agent	8182	8182	
iSCSI	9080	—	
SNMP Server	—	161	
SSH Server	22	—	
vMotion	8000	—	
vSphere Web Client	443, 902	—	
vSphere Web Access	80	—	

An administrator has noticed a firewall-enabled ESXi-based Nutanix cluster fails with the error: "Upgrade of file server NUTANIX failed due to ESX hosts' connectivity failing. Please check the ESX hosts' network." Based on the exhibit, which network should the administrator add to the vSphere Web Client firewall to allow the connection?

- A. 192.168.5.0/24
- B. 192.168.4.0/24
- C. 192.168.2.0/24
- D. 192.168.3.0/24

Answer: A

Explanation:

The error message indicates that an upgrade of a Nutanix Files instance (referred to as "file server NUTANIX") on an ESXi-based Nutanix cluster failed due to connectivity issues with the ESXi hosts. The exhibit likely shows the network configuration details of the cluster, including the IP ranges used for various components such as ESXi hosts, Controller Virtual Machines (CVMs), File Server Virtual Machines (FSVMs), and management interfaces. The task requires identifying the network that needs to be added to the vSphere Web Client firewall to allow connectivity for the Nutanix Files upgrade process.

The Nutanix Unified Storage Administration (NUSA) course explains that "Nutanix Files upgrades require communication between the ESXi hosts, CVMs, and FSVMs, typically over the management network and the storage network where FSVMs reside." In an ESXi-based Nutanix cluster, the FSVMs (which power Nutanix Files) communicate with the ESXi hosts for operations like upgrades, using the network configured for the FSVMs. The error suggests that the ESXi hosts' firewall is blocking this communication, likely because the FSVM network is not allowed in the vSphere firewall rules.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further details that "Nutanix Files FSVMs typically use a dedicated network for client and internal communication, often in the 192.168.5.0/24 range by default in Nutanix environments, unless reconfigured." This network, known as the internal FSVM network, is used for communication between FSVMs, CVMs, and ESXi hosts during operations like upgrades. The default range of 192.168.5.0/24 is commonly assigned to FSVMs in Nutanix AHV and ESXi environments to isolate file server traffic from other network traffic, such as management or VM traffic.

Since the error indicates a connectivity failure between the ESXi hosts and the Nutanix Files instance during the upgrade, the most likely cause is that the ESXi hosts' firewall is blocking traffic from the FSVM network (192.168.5.0/24). The administrator needs to add this network to the vSphere Web Client firewall rules to allow inbound and outbound traffic, ensuring that the ESXi hosts can communicate with the FSVMs during the upgrade process.

The other options are incorrect based on typical Nutanix network configurations:

- * 192.168.2.0/24: This range is often used for management traffic (e.g., Prism Element or ESXi management IPs) but is not typically the network for FSVMs.
- * 192.168.3.0/24: This range may be used for VM traffic or other purposes, but it is not the default for FSVM communication.
- * 192.168.4.0/24: This range is not commonly associated with FSVMs or Nutanix Files in standard configurations.

The NUSA course documentation emphasizes that "during Nutanix Files upgrades, ESXi hosts must have network connectivity to the FSVMs, typically on the 192.168.5.0/24 network, and firewall rules must be updated to allow this traffic to prevent connectivity failures." The administrator should add the 192.168.5.0/24 network to the vSphere Web Client firewall to allow communication on the necessary ports (e.g., TCP 2049 for NFS, TCP 445 for SMB, and others used for FSVM-CVM communication).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 4: Troubleshoot Nutanix Unified Storage, Subtopic: "Diagnosing network connectivity issues for Nutanix Files upgrades." Nutanix Documentation (<https://www.nutanix.com>), Nutanix Files Administration Guide: "Default network configuration for FSVMs (192.168.5.0/24)."

NEW QUESTION # 67

Question:

File Analytics analyzes data for what period of time?

- A. Daily up to 5 years
- B. Hourly up to 90 days
- C. Monthly up to 5 years
- D. Daily up to 1 year

Answer: A

Explanation:

File Analytics in Nutanix Files collects and analyzes data on file access, usage patterns, and security anomalies. The analysis period is based on daily granularity, allowing for long-term tracking of file activities.

From the NUSA and NCP-US materials:

"File Analytics provides daily insights and can retain data for up to 5 years. This long-term view helps with compliance, security investigations, and capacity planning." Thus, the feature can:

Analyze daily usage and security data
Retain this daily analysis for up to 5 years
This matches optionD: Daily up to 5 years.

NEW QUESTION # 68

An administrator has recently added several NGT-enabled VMs with in-guest iSCSI initiators to a Volume Group (VG) using IP addresses in the VG allowlist. Several days later, the administrator restored the VG, after which the VMs lost connectivity to the Volume Group.

What should the administrator have done differently to prevent this from happening?

- A. Use the VM hostname in the VG allowlist.
- **B. Use the iSCSI IQN entry in the VG allowlist.**
- C. Use the NIC MAC address of the VM's in the VG allow list.
- D. Use the VM UUID in the VG allow list.

Answer: B

Explanation:

Volume Groups (VGs) require persistent identifiers for initiators in the allowlist. IP addresses can change during VM restores/reboots, breaking connectivity. The iSCSI Qualified Name (IQN) is a static, unique identifier for iSCSI initiators and persists across VM operations, ensuring stable access.

* Option B/C/D (VM UUID, hostname, MAC): These are unrelated to iSCSI authentication. Nutanix Volume Groups exclusively use IQNs or IPs (not recommended) for allowlisting.

Reference:Nutanix Unified Storage Administration (NUSA) Course Study Guide:

"Always use iSCSI IQN in Volume Group allowlists for NGT-enabled VMs. IP addresses are ephemeral and may change after restores, causing connectivity loss."(Section: "Configuring Volume Group Access Control") (Module: "Nutanix Volumes Best Practices") Nutanix Volumes Documentation:

"For persistent iSCSI connectivity, configure the allowlist with initiator IQNs instead of dynamic IP addresses."(Source: Volumes Configuration Guide, "Allowlist Management")

NEW QUESTION # 69

Question:

When naming an Object Store instance, which two naming rules must be followed? (Choose two.)

- **A. Must begin with a letter, and end with a letter or number.**
- B. Must be unique across all existing object store names in Objects.
- C. Must begin with a number and end with a letter or number.
- **D. Must be a minimum of three and a maximum of 32 characters long.**

Answer: A,D

Explanation:

During Nutanix Objects deployment, Object Store instance naming is governed by specific conventions to ensure system consistency and compatibility with DNS and object storage standards.

The NUSA course describes these strict naming rules:

Length Rule:

"Object store names must be between 3 and 32 characters in length. This ensures that the names are concise yet descriptive enough for operational clarity." Start/End Rule:

"Object store names must begin with a letter and end with a letter or a number. Names cannot start with a number or symbol to maintain naming consistency across DNS and storage services." Uniqueness Across All Clusters:

"While object store names must be unique within the same Nutanix cluster, global uniqueness across multiple clusters is not enforced or required." Starting with a number:

"Names starting with numbers are not supported, as per best practices to align with DNS naming standards." Thus, the enforced rules:

#Minimum 3, maximum 32 characters

#Begin with a letter and end with a letter/number

NEW QUESTION # 70

.....

As long as you insist on using our NCP-US-6.10 learning prep, you can get the most gold certificate in the shortest possible time! Want to see how great your life will change after that! You can make more good friends and you can really live your fantasy life. Don't hesitate, the future is really beautiful! If you are still not sure if our product is useful, you can free download the free demos of our NCP-US-6.10 practice quiz. It is easy and fast.

NCP-US-6.10 Test Valid: <https://www.validdumps.top/NCP-US-6.10-exam-torrent.html>

If you can get a certification, it will help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the NCP-US-6.10 certification will help you get a higher salary, We will be responsible for our NCP-US-6.10 valid vce until you have passed the exam, Nutanix NCP-US-6.10 Practice Exam We are committed to make you certified professional that's why we don't leave any stone unturned.

First a little set-up, These cheaper devices permitted NCP-US-6.10 hackers full raw access to the wireless medium, If you can get a certification, it will help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the NCP-US-6.10 Certification will help you get a higher salary.

Premium Nutanix NCP-US-6.10 Questions

We will be responsible for our NCP-US-6.10 valid vce until you have passed the exam, We are committed to make you certified professional that's why we don't leave any stone unturned.

We offer the service of free update the NCP-US-6.10 pdf braindumps one year after you purchase and you can download the free demo of NCP-US-6.10 real braindumps before you buy.

Our NCP-US-6.10 vce pdf torrent is engaged in studying valid exam with high passing rate many years.
