Getting the Oracle APEX Cloud Developer Professional (1Z0-771) certification is the way to go if you're planning to get into Oracle or want to start earning money quickly. Success in the Oracle APEX Cloud Developer Professional (1Z0-771) exam of this credential plays an essential role in the validation of your skills so that you can crack an interview or get a promotion in an Oracle company. Many people are attempting the Oracle 1Z0-771 test nowadays because its importance is growing rapidly.

Closed cars will not improve, and when we are reviewing our qualifying 1Z0-771 examinations, we should also pay attention to the overall layout of various qualifying examinations. For the convenience of users, our 1Z0-771 learn materials will be timely updated information associated with the qualification of the home page. Our 1Z0-771 Certification material get to the exam questions can help users in the first place. Users can learn the latest and latest test information through our 1Z0-771 test preparation materials. What are you waiting for?

Oracle 1Z0-771 New Exam Braindumps | Latest 1Z0-771 Test Dumps

For years our company is always devoted to provide the best 1Z0-771 study materials to the clients and help them pass the test 1Z0-771 certification smoothly. Our company tried its best to recruit the famous industry experts domestically and dedicated excellent personnel to compile the 1Z0-771 Study Materials and serve for our clients wholeheartedly. Our company sets up the service tenet that customers are our gods and the strict standards for the quality of our 1Z0-771 study materials and the employee's working abilities and attitudes toward work.

Oracle 1Z0-771 Exam Syllabus Topics:

Topic	Details

Topic 1	 Implementing Security in Your Application: This section evaluates the knowledge of Security Specialists in securing APEX applications. It covers authentication schemes, authorization controls, and session state protection to ensure application security and user access management.
Topic 2	Adding Computations, Processes, Validations, and Branches: This section measures the knowledge of Backend Developers in implementing application logic. It focuses on configuring computations, processes, validations, and page branches to automate workflows and ensure data integrity.
Topic 3	Managing Pages and Regions: This section measures the knowledge of UI Designers in structuring application layouts. It covers creating different types of pages and regions, managing page components within Page Designer, and ensuring an optimized user interface for applications.
Торіс 4	Leveraging Generative AI in Oracle APEX: This section tests the knowledge of AI Developers in integrating AI-powered features within APEX applications. It involves using APEX Assistant for code generation, creating AI-driven data models, and implementing AI-powered text generation using dynamic actions.
Горіс 5	Getting Started with Oracle APEX on the Oracle Autonomous Database: This section of the exam measures the skills of APEX Developers in understanding Oracle APEX and its core components. It covers the creation and management of workspaces, providing an overview of how APEX integrates with the Oracle Autonomous Database to streamline application development.
Торіс 6	 Creating and Using Forms: This section evaluates the proficiency of Form Developers in designing user-friendly forms. It covers creating interactive grids, developing simple forms linked to reports, and implementing master-detail forms for effective data management.
Горіс 7	Adding Additional Pages to Your Application: This section assesses the skills of Application Developers in expanding application functionalities. It involves creating Oracle JET charts, calendars, trees, and maps to enhance data visualization and user interaction.
Topic 8	Creating and Using Dynamic Actions and Plug-ins: This section tests the expertise of Developers in implementing dynamic actions. It covers configuring event-driven behaviors and integrating plug-ins to create responsive and interactive application features.
Торіс 9	Developing Reports: This section assesses the skills of Report Developers in creating interactive reports and dashboards. It involves customizing reports, working with faceted search pages, integrating smart filters, and designing visually appealing data presentations using Oracle APEX.
Торіс 10	Managing Application Data: This section evaluates the expertise of Data Engineers in handling application data. It covers using collections, managing REST-enabled SQL references, integrating REST Data Sources, and synchronizing data across different environments.
Торіс 11	 Using Themes and Theme Styles: This section tests the abilities of UI Designers in applying visual themes to applications. It involves selecting and customizing themes, using Theme Roller for design adjustments, and creating template components for consistent branding.
Topic 12	Extending Application Capabilities: This section measures the skills of APEX Developers in enhancing application functionality. It includes sending automated emails, implementing plug-ins, and utilizing automation features to improve efficiency and extend capabilities.
Торіс 13	Implementing Navigation in Your Application: This section assesses the skills of UX Designers in designing smooth application navigation. It includes configuring shared components, setting up search functionalities, and enhancing user experience with intuitive navigation structures.
Торіс 14	Migrating Application Development Between Environments: This section measures the abilities of DevOps Engineers in managing application deployments. It includes exporting and importing application artifacts, performing remote deployments, and maintaining working copies to ensure smooth transitions between development environments.

Topic 15

Creating Application Page Controls: This section tests the abilities of Frontend Developers in implementing
interactive page elements. It includes creating page-level items, buttons, and controls that enhance
navigation and user interaction within APEX applications.

Oracle APEX Cloud Developer Professional Sample Questions (Q10-Q15):

NEW QUESTION #10

In a faceted search page, facets can be displayed as different UI types. Which two facet item types are supported in the faceted search region?

- A. Range
- B. Checkbox Group
- C. Date Picker
- D. Popup LOV

Answer: A,B

Explanation:

In Oracle APEX, a faceted search page allows users to filter data using facets, which are displayed as UI components in the Faceted Search region. According to the Oracle APEX documentation, the supported facet item types include: Range: Used for numeric or date ranges, allowing users to filter data within a specified range (e.g., salary or hire date). Checkbox Group: Used for multi-select options, enabling users to select multiple values from a list (e.g., departments). Other types like Popup LOV and Date Picker are valid item types in APEX but are not natively supported as facet types in the Faceted Search region. Popup LOV is typically used for single-value selection in forms, and Date Picker is a standalone item type, not a facet-specific UI.

NEW QUESTION #11

Which search type in keywords do they represent in Oracle Text?

- · A. Oracle Text
- B. List
- C. Standard

Answer: A

Explanation:

In Oracle APEX, when configuring search functionality (e.g., in reports or faceted search), "Oracle Text" refers to a specific search type leveraging the Oracle Text engine. This is a powerful full-text search capability built into Oracle Database, supporting keyword-based searches, fuzzy matching, and indexing.

Standard: A basic SQL-based search (e.g., LIKE), not tied to Oracle Text.

List: Not a search type; it might refer to a UI component or LOV, not a search mechanism.

Oracle Text: Explicitly uses the CONTAINS operator and text indexes (e.g., CONTEXT or CTXCAT) for advanced search features, ideal for large datasets or complex queries.

This choice impacts performance and accuracy, especially in text-heavy applications.

NEW QUESTION #12

Which client credentials are used for authentication during the 'Check Syntax' process?

- A. APEX Workspace Admin credentials
- B. Database schema credentials
- C. APEX Developer credentials

Answer: B

Explanation:

The "Check Syntax" process in APEX, typically used in SQL Workshop or when validating code, authenticates using Database schema credentials. These are the credentials of the schema associated with the APEX workspace (e.g., username/password of the

schema like "HR"). This ensures the process has access to parse and validate SQL or PL/SQL against the database objects in that schema

APEX Workspace Admin credentials: These are for managing workspaces, not executing database-level syntax checks. APEX Developer credentials: These authenticate developers into the APEX IDE, not the database runtime environment. This design aligns with APEX's security model, where database operations are tied to the schema, ensuring accurate validation and error reporting (e.g., missing privileges or invalid objects).

NEW QUESTION #13

Which two tasks can be performed by using the Generate Text with AI Dynamic Action?

- A. Update the underlying database tables
- B. Invoke a Workflow
- C. Draft an email
- D. Summarize or translate text

Answer: C,D

Explanation:

The 'Generate Text with AI" Dynamic Action uses Generative AI to:

Draft an email: Creates text content like emails based on prompts.

Summarize or translate text: Processes existing text to summarize or translate it.

It does not update database tables or invoke workflows, as it's focused on text generation.

NEW QUESTION #14

Which statement is true about importing an existing application into your workspace?

- A. You cannot import an APEX application exported from the latest APEX version to an old APEX version.
- B. You cannot change the application ID during the import process.
- C. The import process does not import the supporting objects defined during the export.

Answer: A

Explanation:

Importing an APEX application involves transferring its definition (exported as a .sql file):

C . You cannot import an APEX application exported from the latest APEX version to an old APEX version: APEX enforces backward compatibility limits. An app exported from 23.2 (latest features like AI Assistants) can't import into 19.2, as older versions lack support for newer metadata (e.g., APEX_AI tables). The import wizard checks the version and rejects incompatible files.

A . You cannot change the application ID: False; the import wizard prompts for a new ID if there's a conflict or if you choose to override.

B. Supporting objects not imported: False; if included in the export (via "Include Supporting Objects"), they're imported (e.g., tables, triggers), unless skipped explicitly.

Technical Insight: Export files contain a version check (e.g., apex_version := '23.2';), causing rejection if the target instance's APEX_VERSION is lower.

Use Case: Moving an app from a dev instance (23.2) to prod (23.2) works, but not to an outdated test instance (19.1). Pitfall: Always match versions or upgrade the target instance first.

NEW QUESTION #15
