

100% Pass Oracle - Updated Latest Braindumps 1Z1-182 Ebook

P.S. Free 2025 Oracle 1Z1-182 dumps are available on Google Drive shared by PDFBraindumps: https://drive.google.com/open?id=149QVa3dXhhkammAzAAk50bBDRW8GOvj_

In order to cater to different needs of customers, three versions for 1Z1-182 training materials are available, you can choose the most suitable one in accordance with your own needs. 1Z1-182 PDF version is printable, and if you prefer a hard one, you can choose this version. 1Z1-182 Soft test engine supports MS operating system, and it can install in more than 200 computers. 1Z1-182 Online Test engine is convenient and easy to learn, you can have offline practice if you want. 1Z1-182 Online soft test engine supports all web browsers and it has testing history and performance review, and you can have a general review of what you have learnt before next learning.

Oracle 1Z1-182 Exam Syllabus Topics:

Topic	Details
Topic 1	Describe Oracle Database Architecture: This section of the exam measures the skills of Database Administrators and System Architects in understanding the Oracle database architecture. It covers the configurations of Oracle database instances, memory structures like SGA and PGA, and process structures such as background processes. It also explains the logical and physical database structures, including datafiles, control files, and redo log files.
Topic 2	Displaying Creating and Managing PDBs: This section assesses the knowledge of Cloud Database Architects in creating pluggable databases (PDBs) from seeds or other techniques. It also covers modifying PDB modes and attributes to meet specific application requirements.
Topic 3	Moving Data: This section evaluates the expertise of Data Migration Specialists in moving data within Oracle databases. It includes using external tables, executing Oracle Data Pump operations, and distinguishing SQL*Loader commands for importing data efficiently.
Topic 4	Describe Managing Database Instances: This section tests the knowledge of Database Administrators in performing essential tasks for managing database instances. It includes starting and shutting down databases, utilizing dynamic performance views, managing initialization parameter files, and using the Automatic Diagnostic Repository (ADR) for troubleshooting.
Topic 5	Managing Undo: This domain measures the skills of Database Administrators in using undo data effectively. It compares undo data with redo data and explains temporary undo usage for efficient transaction management.

Topic 6	Managing Users, Roles, and Privileges: This domain evaluates the expertise of Security Administrators in implementing user security measures. It focuses on creating and managing users, roles, and privileges to ensure secure access to Oracle databases.
Topic 7	Managing Storage: This section tests the knowledge of Storage Engineers in managing storage features such as resumable space allocation, segment space-saving, and block space management. It also includes defining segment characteristics to optimize storage utilization.
Topic 8	Configuring Oracle Net Services: This section measures the skills of Network Administrators and Database Administrators in configuring Oracle Net Services. It includes identifying administration components, describing connection methods, and ensuring seamless communication between clients and databases.
Topic 9	Employ Oracle-Supplied Database Tools: This section evaluates the abilities of Database Engineers and Support Specialists in identifying and using Oracle-supplied tools for managing databases. It focuses on leveraging tools to monitor, troubleshoot, and optimize database performance effectively.
Topic 10	Introduction to Performance: This section evaluates the expertise of Performance Analysts in summarizing Oracle database performance management techniques. It includes measuring database performance using SQL execution plans, directives, and advisors to ensure optimal system efficiency.
Topic 11	Managing Tablespaces and Datafiles: This section assesses the abilities of Storage Administrators in creating, modifying, and describing tablespaces. It also covers recognizing data storage requirements and understanding datafile placement for efficient storage management.
Topic 12	Automated Maintenance: This section measures the skills of Database Administrators in describing automated maintenance tasks within Oracle databases. It focuses on applying automated features to streamline routine maintenance activities.

Free PDF 2025 Unparalleled 1Z1-182: Latest Braindumps Oracle Database 23ai Administration Associate Ebook

As long as you spend less time on the game and spend more time on learning, the 1Z1-182 study materials can reduce your pressure so that users can feel relaxed and confident during the preparation and certification process on the 1Z1-182 exam. It is believed that many users have heard of the 1Z1-182 Latest preparation materials from their respective friends or news stories. Our 1Z1-182 exam questions are valid and reliable. So why don't you take this step and try on our 1Z1-182 study guide? You will not regret your wise choice.

Oracle Database 23ai Administration Associate Sample Questions (Q23-Q28):

NEW QUESTION # 23

You want to apply the principle of Least Privilege in all your live databases. One of your requirements is to revoke unnecessary privileges from all users who have them using Privilege Analysis. Which three types of analyses can be done using the DBMS_PRIVILEGE_CAPTURE package?

- A. Analysis of privileges that a user has on their own schema objects that they did not use.
- B. Analysis of all privileges used by all users but excluding administrative users in the database.
- C. Analysis of privileges granted directly to a role that are then used by a user who has been granted that role.
- D. Analysis of all privileges used by all users including administrative users in the database.
- E. Analysis of privileges that a user has on their own schema objects that they did use.
- F. Analysis of privileges granted indirectly to a role that are then used by a user who has been granted that role.

Answer: A,E,F

Explanation:

- A .True. Captures unused self-owned object privileges.
- B .False. SYS is excluded from capture.
- C .False. No exclusion option for admin users.
- D .False. Direct role grants aren't separately analyzed.
- E .True. Tracks indirect role privileges used.
- F .True. Identifies used self-owned privileges.

NEW QUESTION # 24

Which advisor is used to detect missing or stale object statistics?

- A. SQL Access Advisor
- B. SQL Tuning Advisor
- **C. SQL Statistics Advisor**
- D. SQL Performance Analyzer

Answer: C

Explanation:

B .True. The SQL Statistics Advisor (new in 23ai) identifies stale or missing statistics. Others focus on tuning, performance analysis, or access paths.

NEW QUESTION # 25

Which two statements are true about advanced connection options supported by Oracle Net for connection to Oracle?

- **A. Connect Time Failover requires the connect string to have two or more listener addresses configured.**
- B. Load Balancing requires the use of a name server.
- C. Source Routing requires the use of encrypted connections.
- D. Connect Time Failover requires the use of Transparent Application Failover (TAF).
- **E. Load Balancing can balance the number of connections to dispatchers when using a Shared Server configuration.**

Answer: A,E

Explanation:

- A .False. Connect Time Failover doesn't need TAF; TAF is for runtime failover.
- B .False. Source Routing doesn't mandate encryption.
- C .True. Needs multiple addresses (e.g., (ADDRESS_LIST=...)) for failover.
- D .False. Load balancing works with tnsnames.ora, no name server required.
- E .True. Balances connections across shared server dispatchers.

NEW QUESTION # 26

Which statement is true about database links?

- A. Private database link creation requires the same user to exist in both the local and the remote databases.
- B. A database link can be created only between two Oracle databases.
- C. A public database link can be created only by SYS.
- D. A public database link can be used by any user allowing remote database instance connection for selecting schema data.
- **E. A database link created in a database allows a connection from that database's instance to the target database's instance for selecting schema data.**

Answer: E

Explanation:

- A .False. Links can connect to non-Oracle DBs via gateways.
- B .False. No such user requirement; authentication is separate.
- C .False. Any user with CREATE PUBLIC DATABASE LINK can create one.
- D .True. Links enable remote schema access (e.g., SELECT * FROM emp@remote).
- E .False. Public links allow access, but privileges on remote objects are needed.

NEW QUESTION # 27

In the SPFILE of a single instance database, LOCAL_LISTENER is set to LISTENER_1. The TNSNAMES.ORA file in \$ORACLE_HOME/network/admin in the database home contains: LISTENER_1 = (ADDRESS = (PROTOCOL = TCP)(HOST = host1.abc.com)(PORT = 1521)). Which statement is true?

- A. LISTENER_1 must also be defined in the LISTENER.ORA file to enable dynamic service registration.
- B. The definition for LISTENER_1 requires a CONNECT_DATA section to enable dynamic service registration.
- **C. The LREG process registers services dynamically with the LISTENER_1 listener.**
- D. There are two listeners named LISTENER and LISTENER_1 running simultaneously using port 1521 on the same host as the database in LISTENERS.
- E. Dynamic service registration cannot be used for this database instance.

Answer: C

Explanation:

Dynamic service registration allows a database to automatically register its services with a listener without manual configuration in LISTENER.ORA. Let's analyze each option:

A . The definition for LISTENER_1 requires a CONNECT_DATA section to enable dynamic service registration.

False. The CONNECT_DATA section is part of a client-side TNSNAMES.ORA entry for connecting to a service, not for listener registration. Dynamic registration is handled by the database's LREG (Listener Registration) process, which uses the LOCAL_LISTENER parameter to locate the listener's address (e.g., host1.abc.com:1521). No CONNECT_DATA is needed in the listener address definition itself. This option confuses client connection syntax with listener configuration.

Mechanics:The listener address in TNSNAMES.ORA (LISTENER_1) is sufficient for LREG to find and register with it, as long as the listener is running at that address.

B . LISTENER_1 must also be defined in the LISTENER.ORA file to enable dynamic service registration.

False. Dynamic registration doesn't require the listener to be explicitly defined in LISTENER.ORA. The LOCAL_LISTENER parameter pointing to LISTENER_1 (resolved via TNSNAMES.ORA) tells LREG where to register services. If the listener is running on host1.abc.com:1521, LREG will find it without a LISTENER.ORA entry. However, LISTENER.ORA is needed to start the listener process, but that's separate from dynamic registration.

Practical Note:If LISTENER.ORA isn't configured, a default listener might run on port 1521, but the question implies LISTENER_1 is operational.

C . The LREG process registers services dynamically with the LISTENER_1 listener.

True. In Oracle 23ai, the LREG background process (replacing PMON's registration role in earlier versions) dynamically registers database services with listeners specified by LOCAL_LISTENER. Here, LOCAL_LISTENER=LISTENER_1 resolves to host1.abc.com:1521 via TNSNAMES.ORA. LREG periodically sends service information (e.g., service names, instance details) to the listener, enabling clients to connect without static configuration.

Mechanics:LREG uses the TNS alias (LISTENER_1) to locate the listener's IP and port, registers services like orcl or orclpdb, and updates the listener's service table. This happens automatically every 60 seconds or on significant events (e.g., instance startup).

D . Dynamic service registration cannot be used for this database instance.

False. The setup (LOCAL_LISTENER set and a valid TNSNAMES.ORA entry) explicitly supports dynamic registration. No blockers (e.g., REGISTRATION_EXCLUDED_LISTENERS) are mentioned, so LREG can function normally.

E . There are two listeners named LISTENER and LISTENER_1 running simultaneously using port 1521 on the same host as the database in LISTENERS.

False. The question mentions only LISTENER_1 in the SPFILE and TNSNAMES.ORA. There's no evidence of a second listener (LISTENER) or a LISTENERS configuration (possibly a typo). Two listeners can't share the same port (1521) on the same host due to port conflicts unless explicitly configured with different IPs, which isn't indicated here.

NEW QUESTION # 28

.....

You may be in a condition of changing a job, but having your own career is unbelievably hard. Then how to improve yourself and switch the impossible mission into possible is your priority. If you want to pass 1Z1-182 exam, here come our 1Z1-182 exam prep giving you a helping hand. Our company has the highly authoritative and experienced team to help you pass the 1Z1-182 Exam. You can not only get the most helpful and valid 1Z1-182 exam questions, but also you can get according suggestions on how to pass the 1Z1-182 exam.
