Reliable 1z0-591 Exam Testking | 1z0-591 Certification Dumps

Countless Oracle Business Intelligence Foundation Suite 11g Essentials 1z0-591 exam candidates have already passed their 1z0-591 certification exam and they all got help from top-notch 1z0-591 pdf questions and practice tests. You should not ignore it and must try real 1z0-591 exam questions today. The TorrentExam is committed to making the Oracle Business Intelligence Foundation Suite 11g Essentials 1z0-591 exam preparation process simple, quick, and smart in all aspects. To avail this objective the TorrentExam is offering valid, updated, and real 1z0-591 practice test questions in three easy-to-use and high-in-demand formats. These formats are Oracle PDF Questions files, desktop practice test software, and web-based 1z0-591 Practice Test software. All these three Oracle Business Intelligence Foundation Suite 11g Essentials 1z0-591 exam question formats are designed and verified by experienced and qualified Oracle 1z0-591 certification exam trainers. So you can trust Oracle Business Intelligence Foundation Suite 11g Essentials 1z0-591 practice test questions and start 1z0-591 exam preparation without wasting further time.

Oracle Business Intelligence Foundation Suite 11g Essentials Sample Questions (Q13-Q18):

NEW QUESTION # 13

When creating Aggregate tables in the OBI repository by using the Aggregate Persistence Wizard, which two statements are true?

- A. The Extraction Transformation and Loading process creates the aggregate tables.
- B. The analyst must first write DML (Data Manipulation Language) scripts to create the aggregate table.
- C. Job Manager can be used to run the Aggregate Persistence script.
- D. The Aggregate Persistence Wizard enables you to automate the creation of physical aggregate tables and their corresponding objects in the repository.

Answer: C,D

Explanation:

B: The Aggregate Persistence Wizard automates the creation and initial population of aggregates, persists them in a back-end database and configures the BI Server metadata layer so that they're used when appropriate.

C: The wizard then shows me a preview of the script it's going to generate, and asks me if I want to create any more summaries. Here's how the preview script looks - note that it's not SQL, it's a script language that the BI Server understands and uses as the specification for an aggregation job, which it then turns into separate CREATE TABLE, INSERT ... SELECT and so on SQL statements, "optimized" for the particular back-end database platform.

Script example:

```
"ag_Items"
for "Seminar - Complete"."Items"("Quantity")
at levels ("Seminar - Complete"."Customerdim"."State", "Seminar - Complete"."Productdim"."Category",
"Seminar - Complete"."Timedim"."Year")
using connection pool "custdw"."CUSTDW_Pool"
in "custdw".. "CUSTDW";
```

NEW QUESTION # 14

Which two Oracle BI Components contain security information regarding permissions and privileges?

- A. The Repository
- B. InstanceConfig.xml File
- C. The Web Catalog
- D. NQServer.ini File
- E. NQSConfig.ini File

Answer: A,E

Explanation:

Explanation

B: Oracle Business Intelligence uses a role-based access control model. Security is defined in terms of Application Roles that are mapped to directory server groups and users.

To define a complete security model, you have then to define:

1. A security structure by creating this elements:

* The directory Server User and Group managed by the authentication provider.

* The application roles managed by the policy store provider

2. a security policy (permissions) split across the following components:

*Presentation Catalog

* Repository

* Policy Store to define the Application Policies managed by the policy store provider D: NQSConfig.ini is the main configuration file of Bi Server and contains a lot of parameters.

The file is located in this directory :

11g: ORACLE_INSTANCE/config/OracleBIServerComponent/coreapplication_obisn All changes made to this file require that you restart the Oracle BI Server Service.

Type of Parameters in NQSConfig.ini:

* Security Section Parameters

The security parameters specify default values for the Oracle BI Server security features.

Includes among others:

/ DEFAULT_PRIVILEGES

* Repository Section Parameters

* Query Result Cache Section Parameters

* General Section Parameters

The General section contains general server default parameters, including localization and internationalization, temporary space and memory allocation, and other default parameters used to determine how data is returned from the Oracle BI Server to a client.

NEW QUESTION # 15

The administration tool is the developer's interface to the repository file. It allows the development of and changes to the metadata repository file. Which statement is true?

- A. Changes to the repository can only be carried out in offline mode.
- **B. Multiple developers can work on one repository at the same time. Results can be merged later on.**
- C. Opening the rpd file in online mode results in performance Issues for the application user.
- D. All aspects of security are being held in the repository file.

Answer: B

Explanation:

The Oracle BI repository development process adheres to the classic Software Configuration Management (SCM) process, which utilizes a three-way merge to manage concurrent development.

The merge process involves three repositories:

In a multiuser environment (MUDE), Developers check out the file and make changes locally.

Then, these changes are automatically reconciled and merged into the master repository.

NEW QUESTION # 16

A customer needs to create a product share calculation. What are the two ways that they would get the revenue for all products to use in the denominator?

- **A. Create a derived measure based on Revenue that has all the levels selected on the Level Tab of the Logical Column Dialog except Total Product.**
- B. Create a derived metric by using the Expression Builder.
- C. Create a derived measure based on Revenue that has the Level Total Product selected on the Level Tab of the Logical Column Dialog.
- **D. Create a derived measure by using the addition function that adds each product value together.**

Answer: A,D

Explanation:

Explanation

Note: A level-based measure is a column whose values are always calculated to a specific level of aggregation.

The calculation of this measure is independent of the query grain and used always the aggregation grain of the logical column. Level-based measures allow :

* to return data at multiple levels of aggregation (the query grain and the level-based column grain) with one single query
 * to create share measures (percentage), that are calculated by taking some measure and dividing it by a level-based measure. For example, you can divide salesperson revenue by regional revenue to calculate the share of the regional revenue each salesperson generates.

NEW QUESTION # 17

When a customer wants to get sales numbers by day, how is data stored in the Star Schema, if the data is loaded nightly?

- A. The lowest level of aggregation
- B. Multiple levels of aggregation
- C. The highest level of aggregation
- D. Independently from aggregation level

Answer: C

Explanation:

Aggregated by days.

NEW QUESTION # 18

.....

Our 1z0-591 exam materials are flexible and changeable, and the service provided by our company is quite specific. Our 1z0-591 test questions have been following the pace of digitalization, constantly refurbishing, and adding new things. I hope you can feel the 1z0-591 exam prep sincerely serve customers. We also attach great importance to the opinions of our customers. As long as you make reasonable recommendations for our 1z0-591 test material, we will give you free updates to the system's benefits. We have always advocated customer first. If you use our learning materials to achieve your goals, we will be honored. 1z0-591 exam prep look forward to meeting you.
