If you are going to attend the Network-Security-Essentials exam, and want to get the certificate of the Network-Security-Essentials exam, then consider the product of our company, since the pass rate of our company are above 98%, and if you attend the exam and failed it within 60 days after the purchasing, money back guarantee. Just think that you just need to spend some money for the Network-Security-Essentials Exam, you will get the certificate of the business, and you not just have a more certificate than others, it's not only a skill, but also a chance. With the certificate for the Network-Security-Essentials exam, you are approved by the professionals and you are also a professional in this industry.

As is known to all, Network-Security-Essentials practice test simulation plays an important part in the success of exams. By simulation, you can get the hang of the situation of the real exam with the help of our free demo of Network-Security-Essentials exam questions. Just as an old saying goes, knowing the enemy and yourself, you can fight a hundred battles with no danger of defeat. Simulation of our Network-Security-Essentials Training Materials make it possible to have a clear understanding of what your strong points and weak points are and at the same time, you can learn comprehensively about the Network-Security-Essentials exam and pass it easily.

Quick Tips for Exam Success using WatchGuard Network-Security-Essentials Questions

In a year after your payment, we will inform you that when the Network-Security-Essentials exam guide should be updated and send you the latest version. Our company has established a long-term partnership with those who have purchased our Network-Security-Essentials exam questions. We have made all efforts to update our products in order to help you deal with any change, making you confidently take part in the Network-Security-Essentials Exam. Every day they are on duty to check for updates of Network-Security-Essentials study materials for providing timely application. We also welcome the suggestions from our customers, as long as our clients propose rationally.

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q16-Q21):

NEW QUESTION # 16

A Firebox backup image includes certificates that were previously imported to the Firebox.

- A. False
- B. True

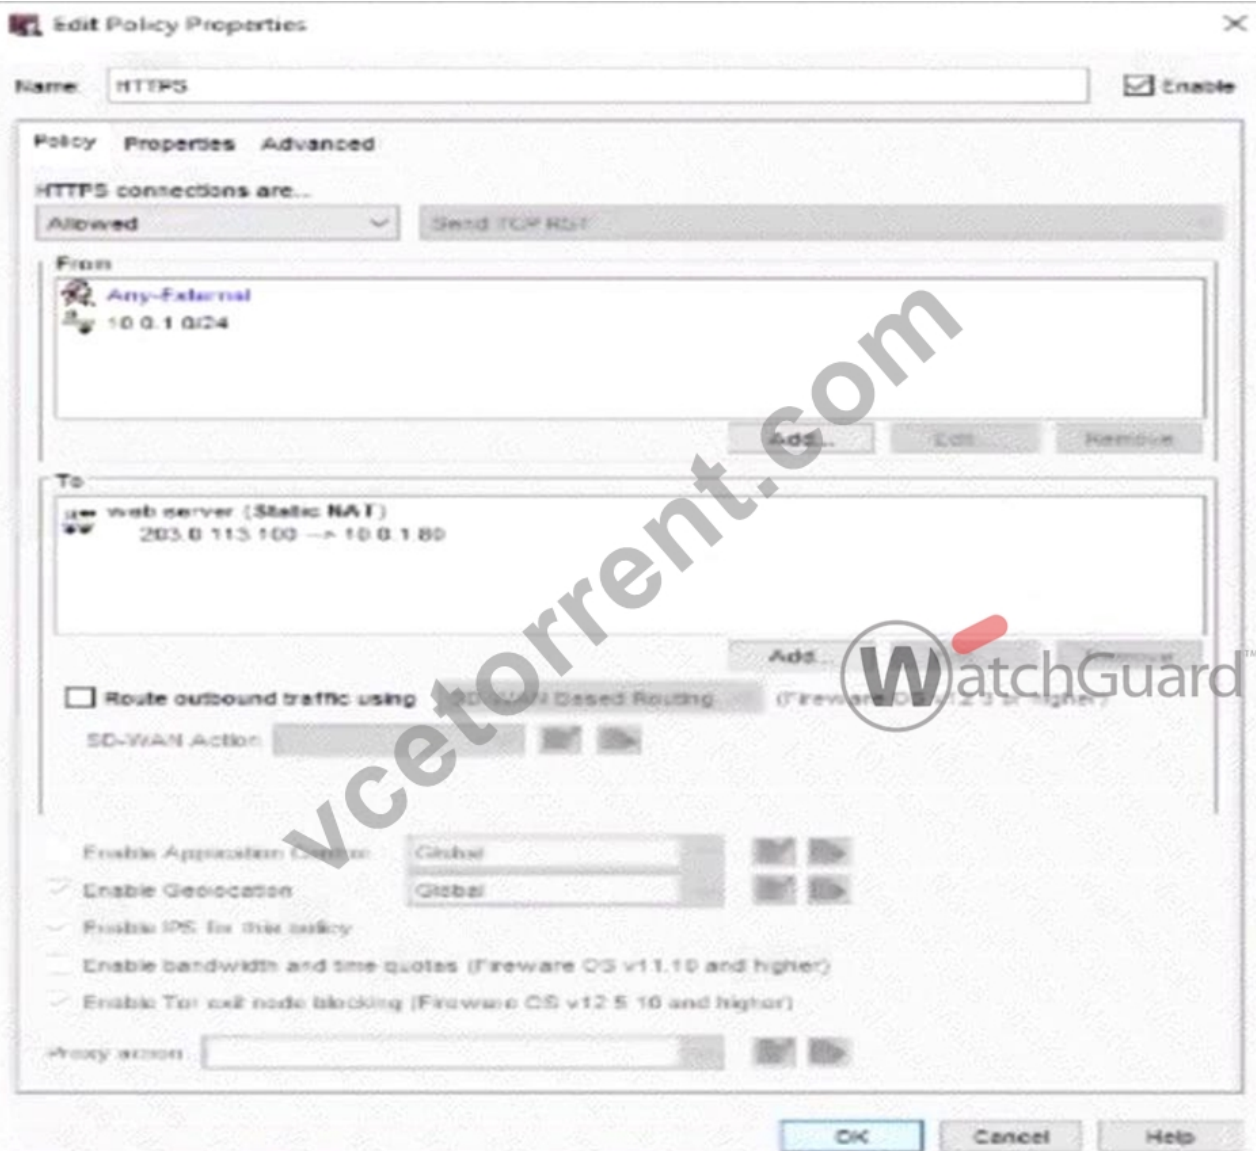

Answer: B

Explanation:

A Firebox backup image indeed includes any certificates previously imported to the Firebox. This backup not only contains configurations and policies but also all associated certificates, ensuring that if a restoration is necessary, all security certificates will be restored alongside other settings. This feature is critical for maintaining the integrity and continuity of encrypted connections and secure communications across the Firebox environment.

NEW QUESTION # 17

A Firebox has an external IP address of 203.0.113.100. A public web server with the IP address 10.0.1.80 is connected to a Firebox internal network. What is the effect of the policy shown in this image? (Select one.)

- A. Allows users on the Internet to connect to the 10.0.1.80 IP address of the web server
- B. Applies dynamic NAT to the 10.0.1.80 IP address of the web server to allow inbound connections
- C. Allows users on the Internet and the 10.0.1.0/24 network to use the external IP address of the Firebox to connect to the web server
- D. Allows users on the Internet and the 10.0.1.0/24 network to use the internal IP address of the Firebox to connect to the web server

Answer: C

Explanation:

In the policy configuration shown in the image:

* From Section: It specifies "Any-External" and 10.0.1.0/24, indicating that this policy applies to traffic from any external source (Internet users) as well as from devices on the internal network 10.0.1.0/24.

* To Section: The destination specifies a public-facing IP address (203.0.113.100) that is statically NAT'd to the internal IP address of the web server (10.0.1.80). This means external users and internal users can access the web server using the Firebox's external IP.

* Effect of Static NAT: The policy uses Static NAT to map the Firebox's external IP address to the web server's internal IP address, allowing inbound connections to reach the server. This setup provides consistent access for both external and internal users via the same public IP address.

This configuration effectively enables both Internet users and users within the specified internal network (10.0.1.0/24) to connect to the web server using the Firebox's external IP, making Option D the correct answer.

NEW QUESTION # 18

You configured email notifications in WatchGuard Cloud for your Firebox Device Alarms and want to receive an email when your users download any .exe files through an HTTP proxy. You must enable what type of log message in the Firebox configuration? (Select one.)

- A. Denied traffic logs for the HTTP proxy policy
- **B. Alarm logs for the EXE/DLL Body Content rule in the HTTP proxy**
- C. Diagnostic logs for Gateway AntiVirus
- D. Allowed traffic logs for the HTTP proxy policy
- E. Alarm logs for when a virus is detected in the HTTP proxy

Answer: B

Explanation:

To receive email notifications when users download .exe files through an HTTP proxy, you need to enable Alarm logs for the EXE/DLL Body Content rule in the HTTP proxy configuration on the Firebox. This setting ensures that alerts are triggered whenever executable files are detected, and WatchGuard Cloud can send notifications based on these alarms.

Other logging options, such as allowed or denied traffic logs, would not provide the specific alerts required for .exe file downloads through the proxy.

NEW QUESTION # 19

When you configure a Branch Office VPN tunnel to a third-party device, AES-GCM encryption is recommended for:

- A. Better uptime because of additional keep-alive options
- **B. Better performance and throughput when supported by both VPN endpoints**
- C. Routing over a BOVPN
- D. Troubleshooting purposes
- E. Connections to third-party firewalls only

Answer: B

Explanation:

AES-GCM (Galois/Counter Mode) encryption is recommended for VPNs because it provides strong encryption with high performance and low overhead, making it an ideal choice for environments where both endpoints support it. AES-GCM combines encryption and authentication in a single step, resulting in faster processing compared to traditional encryption modes that handle these tasks separately. This mode is advantageous for maintaining high throughput in VPN tunnels, especially beneficial for branch office or inter-site VPNs where performance is critical.

NEW QUESTION # 20

You lost access to a Firebox because no one knows the administrator passphrase. How can you regain access to the Firebox? (Select one.)

- A. Connect with a console cable to reset the passphrase
- **B. Reset the Firebox to its factory defaults**
- C. Plug in a USB flash drive with the WatchGuard Password Reset utility loaded
- D. Restore a backup image of the Firebox
- E. Call WatchGuard Support for a passphrase reset

Answer: B

Explanation:

If the administrator passphrase is lost:

* Option A: Resetting the Firebox to factory defaults is the recommended solution to regain access, as it clears the current configurations, including the admin passphrase, allowing reconfiguration from scratch.

* Option B (USB reset utility) and Option E (console cable reset) are not standard options for passphrase recovery on Firebox.

* Option C (Calling WatchGuard Support) cannot directly reset the passphrase.

* Option D (Restoring a backup) requires access to the device with the current passphrase.

NEW QUESTION # 21

.....

Our Network Security Essentials for Locally-Managed Fireboxes exam questions are curated and crafted by experts. We have put in a lot of efforts to create amazing guides for our customers. Passing Network-Security-Essentials can be hard, and you won't find such exam Network-Security-Essentials Brain Dumps anywhere. With Network-Security-Essentials sample questions exam dumps, you can secure high marks in the Network-Security-Essentials. We provide 100% money back guarantee on exam Network-Security-Essentials practice exam products.
