Axis Network Video Exam Sample Questions (Q319-Q324):

NEW QUESTION # 319

Which of the following statements is a recommended best practice for outdoor installations of Axis cameras?

- A. Connect a UPS to the network switch
- B. Ensure that a surge suppressor is installed in front of each camera
- C. Ensure that the end points are properly grounded
- D. Connect cameras and end points (midspan, endspan, network switch or hub) with Category 5e UTP cable

Answer: C

NEW QUESTION # 320

An installer needs to integrate a camera inside a vending machine. Which of the following camera types is the most appropriate?

- A. PTZ camera
- B. Box camera
- C. Bullet camera
- D. Modular camera

Answer: D

Explanation:

"Modular cameras (also called sensor units) are ideal for discreet and flexible installations in tight or unconventional spaces, such as ATMs, vending machines, and door intercoms, because the sensor and main unit can be separated and mounted independently."

- Axis Communications Academy, Network Video Fundamentals, 2022

"Axis modular cameras are specifically designed for integration into machines, kiosks, and other compact environments where space is limited."

NEW QUESTION # 321

In a dark indoor environment one single Axis illuminator is available. At a distance of 1 m (3 ft 3 in) away from the illuminator the light intensity is 1024 lux. At what distance from the light source will the light intensity be 256 lux?

- A. 2 m (6 ft 7 in)
- B. 16 m (52 ft 6 in)
- C. 4m (13 ft 1 in)
- D. 8 m (26 ft 3 in)

Answer: A

NEW QUESTION # 322

Typically, a system designer calculates the pixel density based on

- A. the total resolution and the installation height.
- B. the horizontal resolution and the field of view.
- C. the aspect ratio and the frame rate.
- D. the illuminance and the depth of field.

Answer: B

Explanation:

Typically, a system designer calculates the pixel density based on the horizontal resolution and the field of view. Pixel density is crucial in determining the level of detail a camera can capture in a specific area.

Horizontal resolution refers to the number of pixels along the horizontal axis of the image sensor, while the field of view is the extent

of the observable area captured by the camera. This calculation helps in ensuring that the camera setup meets the surveillance requirements.

NEW QUESTION # 323

Where is the best place to mount a camera with a fixed iris?

- A. Inside, in a room with large windows
- B. Outside, on a pole
- C. Inside, in a room with very strong light sources
- **D. Outside, in a shadowed position**

Answer: D

Explanation:

A camera with a fixed iris is best mounted outside in a shadowed position. Fixed iris lenses do not adjust to changes in light levels, making them less suitable for environments with varying lighting conditions. By placing the camera in a shadowed position, you minimize the impact of direct sunlight and glare, which can cause overexposure and poor image quality. Therefore, the correct answer is C. For more detailed information, refer to Axis Communications' documentation on camera installation and fixed iris lenses.
