It focuses on optimizing performance, resolving issues, and ensuring data security in data visualization environments.</li> </ul> |

## SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Your embedded dataset in SAP Analytics Cloud has columns for Country, Region, City, and Customer Name. You want to aggregate measures for these columns as a single column. What can you do?

- A. Convert the embedded dataset to a model.
- B. Create a group that includes the dimensions.
- **C. Create a level-based hierarchy in the dataset.**
- D. Create a parent-child hierarchy in the dataset.

**Answer: C**

Explanation:

To aggregate measures for columns such as Country, Region, City, and Customer Name as a single column in an embedded dataset, creating a level-based hierarchy is the most effective approach. This type of hierarchy allows you to define a multi-level structure that represents the logical relationship between different geographical entities and customer names. By doing so, you can easily perform aggregations and analyze data at various levels of detail, from the broadest level (e.g., Country) down to the most specific one (e.g., Customer Name).

### NEW QUESTION # 30

What are the available connection types in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- **A. Live**
- **B. Import**
- C. On-premise
- D. Cloud

**Answer: A,B**

Explanation:

SAP Analytics Cloud supports two primary types of data connections: Live Data Connection and Import Data Connection. Live Data Connection establishes a direct link to the data source, allowing real-time data access without replicating the data into SAP Analytics Cloud. This is ideal for scenarios where up-to-the-minute data is crucial, and data volume is large. On the other hand,

Import Data Connection involves copying data from the source into SAP Analytics Cloud, which is suitable for scenarios where data doesn't change frequently, or there's a need for data transformation and enrichment within SAP Analytics Cloud.

#### NEW QUESTION # 31

You are entering values for several expense accounts in a data table. Which data entry mode must you use to process the data with a delay defined in System Administration?

- A. Fluid
- B. Mass
- C. Single

**Answer: A**

#### NEW QUESTION # 32

What can you do to reduce the data refresh time when opening a story? Note: There are 3 correct answers to this question.

- A. Load widgets in the background
- B. Use responsive pages
- C. Use conditional formatting
- D. Avoid tables with more than 500 rows and 60 columns
- E. Avoid prompts

**Answer: A,C,D**

#### NEW QUESTION # 33

Which programming language is used for scripting in an SAP Analytics Cloud story?

- A. Wrangling Expression Language
- B. JavaScript
- C. Python
- D. ABAP

**Answer: B**

#### NEW QUESTION # 34

.....
