Love is precious and the price of freedom is higher. Do you think that learning day and night has deprived you of your freedom? Then let Our 100-150 guide tests free you from the depths of pain. With 100-150 guide tests, learning will no longer be a burden in your life. You can save much time and money to do other things what meaningful. You will no longer feel tired because of your studies, if you decide to choose and practice our 100-150 Test Answers. Your life will be even more exciting.

From the moment you first touch 100-150 simulating exam, you can feel the sense of security we are trying to bring you. You are not only the user of 100-150 training prep, but also our family and friends. We have the same goal to let you enjoy the best service and the best quality of our 100-150 Exam Questions. Meanwhile, we have develped our 100-150 learning braindumps so much to help you pass the exam. And you will be bound to pass the exam with our 100-150 training quiz.

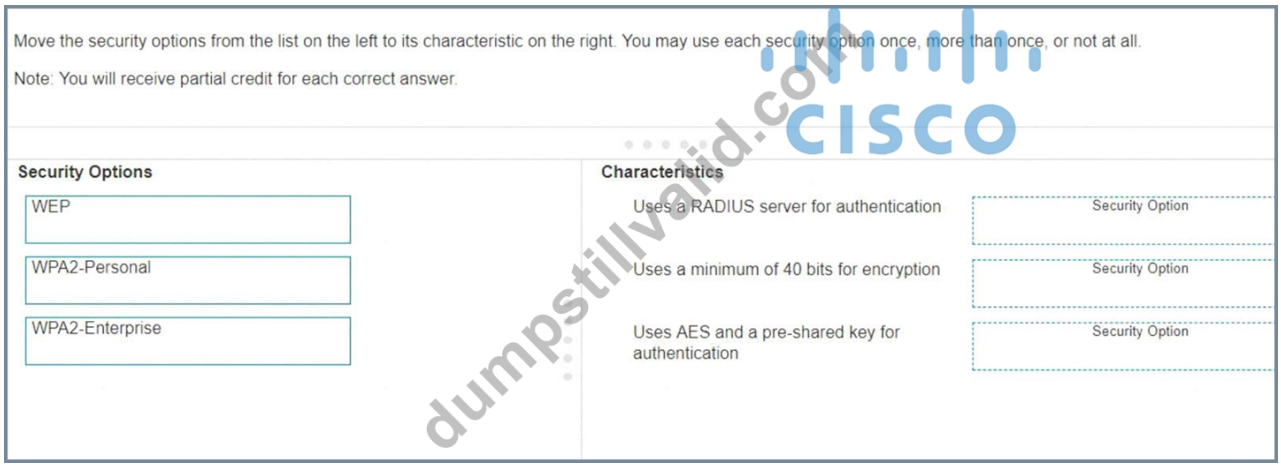
100-150 Detailed Answers & Real 100-150 Exams

Cisco 100-150 certification exam is one of the most valuable certification exams. IT industry is under rapid development in the new century, the demands for IT talents are increased year by year. Therefore, a lots of people want to become the darling of the workplace by IT certification. How to get you through the Cisco 100-150 certification? The questions and the answers DumpStillValid Cisco provides are your best choice. It is difficult to pass the test and the proper shortcut is necessary. Cisco Business Solutions DumpStillValid 100-150 Dumps rewritten by high rated top IT experts to the ultimate level of technical accuracy. The version is the most latest and it has a high quality products.

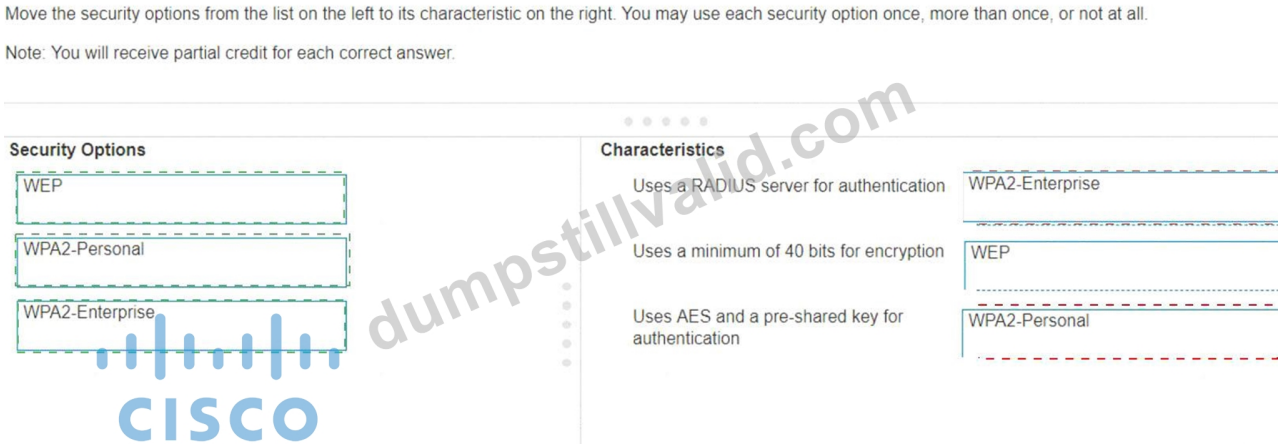
Cisco Certified Support Technician (CCST) Networking Sample Questions (Q38-Q43):

NEW QUESTION # 38
Move the security options from the list on the left to its characteristic on the right. You may use each security option once, more than once, or not at all.
Note: You will receive partial credit for each correct answer.



Answer:

Explanation:



Explanation:
The correct matching of the security options to their characteristics is as follows:
* WPA2-Enterprise: Uses a RADIUS server for authentication
* WEP: Uses a minimum of 40 bits for encryption
* WPA2-Personal: Uses AES and a pre-shared key for authentication
Here's why each security option matches the characteristic:
* WPA2-Enterprise uses a RADIUS server for authentication, which provides centralized Authentication, Authorization, and Accounting (AAA) management for users who connect and use a network service.
* WEP (Wired Equivalent Privacy) is an outdated security protocol that uses a minimum of 40 bits for encryption (and up to 104 bits), which is relatively weak by today's standards.
* WPA2-Personal (Wi-Fi Protected Access 2 - Personal) uses the Advanced Encryption Standard (AES) for encryption and a pre-shared key (PSK) for authentication, which is shared among users to access the network.
These security options are essential for protecting wireless networks from unauthorized access and ensuring data privacy.

NEW QUESTION # 39
A help desk technician receives the four trouble tickets listed below.
Which ticket should receive the highest priority and be addressed first?

- A. Ticket 4: Two users report that wireless access in the cafeteria has been down for the last hour.
- B. Ticket 1: A user requests relocation of a printer to a different network jack in the same office. The jack must be patched and made active.
- C. Ticket 2: An online webinar is taking place in the conference room. The video conferencing equipment lost internet access.
- D. Ticket 3: A user reports that response time for a cloud-based application is slower than usual.

Answer: C

Explanation:
When prioritizing trouble tickets, the most critical issues affecting business operations or high-impact activities should be addressed

first.
Here's a breakdown of the tickets:
Ticket 1: Relocation of a printer, while necessary, is not urgent and does not impact critical operations.
Ticket 2: An ongoing webinar losing internet access is critical, especially if the webinar is time-sensitive and involves multiple participants.
Ticket 3: Slower response time for a cloud-based application is important but typically not as urgent as a complete loss of internet access for a live event.
Ticket 4: Wireless access down in the cafeteria affects users but does not have the same immediate impact as a live webinar losing connectivity.
Thus, the correct answer is B. Ticket 2: An online webinar is taking place in the conference room. The video conferencing equipment lost internet access.

NEW QUESTION # 40
What is the purpose of assigning an IP address to the management VLAN interface on a Layer 2 switch?

- A. To enable the switch to act as a default gateway for the attached devices
- B. To enable the switch to resolve URLs for the attached the devices
- C. To enable access to the CLI on the switch through Telnet or SSH
- D. To enable the switch to provide DHCP services to other switches in the network

Answer: C

Explanation:
The primary purpose of assigning an IP address to the management VLAN interface on a Layer 2 switch is to facilitate remote management of the switch. By configuring an IP address on the management VLAN, network administrators can access the switch's Command Line Interface (CLI) remotely using protocols such as Telnet or Secure Shell (SSH). This allows for convenient configuration changes, monitoring, and troubleshooting without needing physical access to the switch1.
Reference: =
* Understanding the Management VLAN
* Cisco - VLAN Configuration Guide
* Remote Management of Switches
Assigning an IP address to the management VLAN interface (often the VLAN 1 interface by default) on a Layer 2 switch allows network administrators to remotely manage the switch using protocols such as Telnet or SSH. This IP address does not affect the switch's ability to route traffic between VLANs but provides a means to access and configure the switch through its Command Line Interface (CLI).
* A: The switch does not act as a default gateway; this is typically a function of a Layer 3 device like a router.
* B: The switch does not resolve URLs; this is typically a function of DNS servers.
* C: The switch can relay DHCP requests but does not typically provide DHCP services itself; this is usually done by a dedicated DHCP server or router.
Thus, the correct answer is D. To enable access to the CLI on the switch through Telnet or SSH.

NEW QUESTION # 41
How does low bandwidth affect network performance?

- A. Decreases latency
- B. Increases latency
- C. Has no effect on latency
- D. Increases throughput

Answer: B

NEW QUESTION # 42
You purchase a new Cisco switch, turn it on, and connect to its console port. You then run the following command:

```
#show running-config | section include interface
interface GigabitEthernet0/1
!
interface GigabitEthernet0/2
!
<output omitted>
```

For each statement about the output, select True or False.
Note: You will receive partial credit for each correct selection.

	True	False
The two interfaces are administratively shut down.	○	○
The two interfaces have default IP addresses assigned.	○	○
The two interfaces can communicate over Layer 2.	○	○

Answer:

Explanation:

	True	False
The two interfaces are administratively shut down.	○	○
The two interfaces have default IP addresses assigned.	○	○
The two interfaces can communicate over Layer 2.	○	○

Explanation:
* The two interfaces are administratively shut down:
* False: The output does not show any "shutdown" command under the interfaces, which would indicate that they are administratively shut down. Therefore, they are likely in their default state, which is administratively up.
* The two interfaces have default IP addresses assigned:
* False: The output does not show any IP address configuration. In the default state, interfaces do not have IP addresses assigned unless explicitly configured.
* The two interfaces can communicate over Layer 2:
* True: By default, interfaces on a switch are Layer 2 interfaces capable of forwarding Ethernet frames. As there is no configuration provided that changes this, it can be assumed they can communicate over Layer 2.
* Interface Status: The absence of the "shutdown" command means the interfaces are not administratively shut down.
* IP Address Assignment: There is no evidence in the output that IP addresses have been assigned to the interfaces, which would typically be shown as "ip address" entries.
* Layer 2 Communication: Switch interfaces in their default state operate at Layer 2, enabling them to forward Ethernet frames and participate in Layer 2 communication.
