Free PDF 2025 CLO-002: CompTIA Cloud Essentials+ Certification Exam Latest Pdf Pass Leader

One of the reason for this popularity is our study material are accompanied by high quality and efficient services so that they can solve all your problems. We guarantee that after purchasing our CLO-002 test prep, we will deliver the product to you as soon as

possible about 5-10 minutes. So you don't need to wait for a long time or worry about the delivery time has any delay. We will transfer our CLO-002 Test Prep to you online immediately, and this service is also the reason why our CLO-002 study torrent can win people's heart and mind.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which of the following storage solutions offers the greatest flexibility to a company that is investing in a modern virtualization infrastructure for its hybrid cloud environment?

- A. Hot storage
- B. Object storage
- C. Software-defined storage
- D. Storage area network

Answer: C

Explanation:

Software-defined storage (SDS) offers the greatest flexibility for a company investing in a modern virtualization infrastructure, particularly in a hybrid cloud environment. SDS decouples storage hardware from the software that manages it, allowing for greater scalability, adaptability, and integration with both on-premises and cloud environments. It enables the company to manage storage resources efficiently, allocate them dynamically, and integrate them seamlessly across various cloud platforms and virtualized environments.

NEW QUESTION # 78

A company has been running tests on a newly developed algorithm to increase the responsiveness of the application. The company's monthly bills for the testing have been much higher than expected.

Which of the following documents should the company examine FIRST?

- A. Storage report
- B. Compute report
- C. Network report
- D. Memory report

Answer: C

NEW QUESTION # 79

Why does hardware and operating system maintenance take less effort with SaaS?

- A. Operating system vendor takes care of it
- B. Hardware vendor takes care of it
- C. Maintenance becomes irrelevant
- D. Cloud provider takes care of it

Answer: D

NEW QUESTION # 80

Which of the following BEST describes the open-source licensing model for application software?

- A. Software is free to use, but the source code is not available to modify.
- B. Code modifications must be submitted for approval.
- C. Source code is readily available to view and use.
- D. Modifications to existing software are not allowed.

Answer: C

Explanation:

The open-source licensing model for application software is a type of software license that allows anyone to access, modify, and distribute the source code of the software, subject to certain terms and conditions. The source code is the human-readable version of the software that contains the instructions and logic for how the software works. By making the source code available, open-source software licenses enable collaboration, innovation, and transparency among software developers and users. There are different types of open-source software licenses, such as permissive and copyleft licenses, that vary in the degree of freedom and restriction they impose on the use and modification of the software. However, the common characteristic of all open-source software licenses is that they grant the right to view and use the source code of the software. Therefore, option D is the best description of the open-source licensing model for application software. Option A is incorrect because it describes the opposite of the open-source licensing model. Software that is free to use, but the source code is not available to modify, is called closed-source or proprietary software. Option B is incorrect because it contradicts the open-source licensing model. Modifications to existing software are allowed under open-source software licenses, as long as they comply with the terms and conditions of the license. Option C is incorrect because it does not reflect the open-source licensing model. Code modifications do not need to be submitted for approval under open-source software licenses, although they may need to be shared with the original author or the community, depending on the license.
