EMC Dell PowerFlex Implementation Achievement Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which tool can be used to install the SDR component in a PowerFlex 4.x cluster?

- A. vSphere Plug-In
- B. PowerFlex Manager
- C. Installation Manager
- D. PowerFlex WebUI

Answer: B

Explanation:

The PowerFlex Manager is the tool specifically designed for managing and orchestrating the deployment of components, including SDR (Storage Data Replication), in a PowerFlex 4.x environment.

* Purpose of PowerFlex Manager: PowerFlex Manager simplifies the implementation and lifecycle management of PowerFlex clusters. It includes workflows to install, configure, and upgrade components such as the SDR.

* Why Not the Other Options?

* vSphere Plug-In: This is used for managing and monitoring PowerFlex components within a vSphere environment but doesn't handle SDR installation.

* PowerFlex WebUI: This interface is used for day-to-day cluster management tasks but is not designed to install SDR components.

* Installation Manager: While it can assist with certain components during the setup process, it is not the dedicated tool for SDR installations.

References: Dell PowerFlex documentation specifies the use of PowerFlex Manager for orchestrating SDR installations. Consult the "PowerFlex Manager Deployment Guide" and "PowerFlex 4.x Administration Guide" for further details.

NEW QUESTION # 15

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Resources
- B. Lifecycle
- C. Protection
- D. Settings

Answer: A

Explanation:

The Resources section in PowerFlex Manager is where administrators go to discover and manage physical and virtual infrastructure components, including switches:

* Resources Overview (Option A):

* The Resources area provides a centralized view of hardware and software components, including switches, nodes, and other devices.

* Discovery of switches involves scanning the network to identify switch configurations and integrate them into the PowerFlex environment for monitoring and management.

* Why Not the Other Options?

* Option B: Protection: This area focuses on data protection and backup solutions within PowerFlex, not hardware discovery.

* Option C: Lifecycle: While Lifecycle helps manage the firmware and software updates, it does not handle hardware discovery tasks.

* Option D: Settings: The Settings section is used for configuring PowerFlex Manager itself, such as network settings and system options, not discovering switches.

NEW QUESTION # 16

How many days may a PowerFlex cluster remain in a production environment after deployment before a license is required for continued operation?

- A. 120 days
- B. 30 days
- C. 90 days
- D. 60 days

Answer: C

NEW QUESTION # 17

What is the minimum number of nodes required to create a production PowerFlex Management Platform Cluster?

- A. 0
- B. 1
- C. 2

- D. 3

Answer: A

Explanation:

The minimum number of nodes required to create a production PowerFlex Management Platform Cluster is 3, ensuring fault tolerance and redundancy.

* Reason for 3 Nodes (Option D):

* A minimum of three nodes is required to ensure proper cluster functionality, including quorum for the Metadata Manager (MDM) roles.

* This configuration supports high availability and fault tolerance, ensuring the cluster remains operational even if one node fails.

* Why Not the Other Options?

* Option A: 9: While additional nodes can be added to enhance capacity and redundancy, nine nodes are not the minimum requirement.

* Option B: 1: A single node does not provide redundancy or failover capabilities, which are critical for production environments.

* Option C: 5: While five nodes increase capacity and resilience, the minimum requirement is only three nodes.
