Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q23-Q28):

NEW QUESTION # 23

Refer to the exhibits.

You use FortiManager to configure SD-WAN on three branch devices.

SD-WAN template zones and rules configuration

```
error -999 - - (from Template Group Corp-SOT_Branch) (in Template branches)
invalid ip - prop[gateway]: ip4class($(sdwan_port1_gw)) invalid ip addr
```

When you install the device settings, FortiManager prompts you with the error "Copy Failed" for the device branch1_fgt. When you click the log button, FortiManager displays the message shown in the exhibit.

There are two different ways to resolve this issue. Based on the exhibits, which methods could you use? (Choose two.)

- A. Review the per-device mapping configuration for metadata variables
- B. Update the management IP address of branch1_fgt.
- C. Specify the gateway of the SD-WAN member port1 with an IP address or use the default value.
- D. Do not define installation targets for SD-WAN members.

Answer: A,C

Explanation:

Specify the gateway of the SD-WAN member port1 with an IP address or use the default value # The error log shows invalid ip - prop[gateway]: ip4class(\$(sdwan_port1_gw)) invalid ip addr, meaning the variable \$sdwan_port1_gw does not have a valid mapping. Assigning a valid IP address or default value for the gateway resolves this error.

Review the per-device mapping configuration for metadata variables # The issue is tied to how the metadata variable \$sdwan_port1_gw is mapped for branch1_fgt. If this device does not have the variable properly defined in per-device mapping, the configuration will fail. Correcting the mapping ensures that the install works.

NEW QUESTION # 24

Refer to the exhibit. An administrator checks the status of an SD-WAN topology using the FortiManager SD-WAN monitor menus. All members are configured with one or two SLAs. Which two conclusions can you draw from the output shown? (Choose two.)

FortiManager SD-WAN monitor

- A. The template view should be used to see the hub devices.

- B. One member of branch2_fgt is missing the SLAs.
- C. branch2_fgt establishes six tunnels to the hubs and they are all up.
- D. This SD-WAN topology contains only two branch devices.

Answer: B,D

Explanation:

The monitor shows only two devices (branch1_fgt and branch2_fgt), indicating the topology contains two branch devices.

HUB1-VPN2 under branch2_fgt has an orange X, indicating it's up but not meeting SLA requirements - likely due to missing or failing SLA targets.

NEW QUESTION # 25

Refer to the exhibit.

Refer to the exhibit.

You want to configure SD-WAN on a network as shown in the exhibit.

The network contains many FortiGate devices. Some are used as NGFW, and some are installed with extensions such as FortiSwitch, FortiAP, or Forti Extender.

What should you consider when planning your deployment?

- A. You must build multiple SD-WAN topologies. Each topology must contain only one type of extension.
- B. You can build an SD-WAN topology that includes all devices. The hubs can be FortiGate devices with Forti Extender.
- C. You must use FortiManager to manage your SD-WAN topology.
- D. You can build an SD-WAN topology that includes all devices. The hubs must be devices without extensions.

Answer: D

NEW QUESTION # 26

Refer to the exhibits, which show the configuration of an SD-WAN rule and the corresponding rule status and routing table.

SD-WAN rule

```

The administrator wants to understand the expected behavior for traffic matching the SD-WAN rule. Based on the exhibits, what can the administrator expect for traffic matching the SD-WAN rule?

- A. The traffic will be routed over HUB1-VPN2
- B. The traffic will be routed over HUB1-VPN3.
- C. The traffic will be routed over HUB1-VPN1.
- D. The traffic will be load balanced across all three overlays

Answer: A

Explanation:

The rule is in SLA mode with two SLAs. From the status, HUB1-VPN2 and HUB1-VPN3 meet the SLA (sla(0x2) and sla(0x3)), while HUB1-VPN1 does not (sla(0x0)). Among members that meet SLA, FortiGate uses the configured order (priority-members 4 5 6) to pick the first eligible one- HUB1-VPN2-so traffic is routed over HUB1-VPN2.

NEW QUESTION # 27

Which statement describes FortiGate behavior when you reference a zone in a static route?

- A. FortiGate routes the traffic through the best performing member of the zone.
- **B. FortiGate installs a static route for each member in the zone.**
- C. FortiGate installs ECMP static routes for the first two members of the zone.
- D. FortiGate ignores the static routes defined through members referenced in the zone.

Answer: B
