NEW QUESTION # 16

Refer to the exhibit.

Cloud Shell Terraform output

```
Plan: 1 to add, 0 to change, 0 to destroy.

Changes to Outputs:
+ FortiGate-Username = "admin"

Error: Failed to retrieve project, pid: , err: project: required field is not set

with google_compute_image.fgtvmgvmnic[0],
on main.tf line 19, in resource "google_compute_image" "fgtvmgvmnic":
19: resource "google_compute_image" "fgtvmgvmnic" {}

Error: Failed to retrieve project, pid: , err: project: required field is not set

with google_compute_disk.logdisk,
on main.tf line 39, in resource "google_compute_disk" "logdisk":
39: resource "google_compute_disk" "logdisk" {}

Error: Failed to retrieve project, pid: , err: project: required field is not set

with google_compute_disk.logdisk2,
on main.tf line 47, in resource "google_compute_disk" "logdisk2":
47: resource "google_compute_disk" "logdisk2" {}
```

An administrator is attempting to deploy a Terraform template using Google Cloud Shell.

Which step must the administrator take to solve the error?

- A. Manually create a Google Cloud storage bucket for logging functionality.
- B. Use the command `terraform init` to initialize the Terraform directory.
- C. Delete the admin user to proceed with the Terraform script.
- D. Use the command `gcloud config set project` to set the Google Cloud project in Google Cloud Shell.

Answer: D

Explanation:

The error indicates the Google Cloud project is not set, which is required for Terraform to access resources.

Setting the project with gcloud config set project [PROJECT_ID] resolves this by specifying the active project in Cloud Shell.

NEW QUESTION # 17

Refer to the exhibit.

Which action must the administrator take to route traffic from VPC B to VPC A?

- A. The administrator must configure a custom route in VPC B and point the gateway to VPC A.
- **B. The administrator must deploy a FortiGate VM with at least three network interfaces.**
- C. The administrator must create a new VPC peering connection between VPC A and VPC B.
- D. The administrator must configure a custom route in VPC B and point the gateway to the VPC peering service.

Answer: B

Explanation:

Because VPC peering is non-transitive, traffic cannot route from VPC B to VPC A via VPC C. To enable routing between VPC A and VPC B through VPC C, a FortiGate VM with multiple network interfaces can act as a firewall/router to manage traffic between the three VPCs.
