Latest GitHub GitHub-Advanced-Security Exam Review - GitHub-Advanced-Security Valid Study Materials

There is no doubt that we all dream of working for top companies around the globe. Some people make it through but some keep on thinking about how to break that glass. If you are among those who belong to the latter category, you should start the preparations for the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) certification exam to improve your knowledge, expertise and crack even the toughest interview easily.

GitHub Advanced Security GHAS Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which of the following options would close a Dependabot alert?

- A. Viewing the dependency graph
- B. Creating a pull request to resolve the vulnerability that will be approved and merged
- C. Viewing the Dependabot alert on the Dependabot alerts tab of your repository

- D. Leaving the repository in its current state

Answer: B

Explanation:

A Dependabot alert is only marked as resolved when the related vulnerability is no longer present in your code

- specifically after you merge a pull request that updates the vulnerable dependency.

Simply viewing alerts or graphs does not affect their status. Ignoring the alert by leaving the repo unchanged keeps the vulnerability active and unresolved.

NEW QUESTION # 27

Which key is required in the update settings of the Dependabot configuration file?

- **A. package-ecosystem**
- B. rebase-strategy
- C. assignees
- D. commit-message

Answer: A

Explanation:

In a dependabot.yml configuration file, package-ecosystem is a required key. It defines the package manager being used in that update configuration (e.g., npm, pip, maven, etc.).

Without this key, Dependabot cannot determine how to analyze or update dependencies. Other keys like rebase-strategy or commit-message are optional and used for customizing behavior.

NEW QUESTION # 28

What filter or sort settings can be used to prioritize the secret scanning alerts that present the most risk?

- A. Select only the custom patterns
- **B. Filter to display active secrets**
- C. Sort to display the newest first
- D. Sort to display the oldest first

Answer: B

Explanation:

The best way to prioritize secret scanning alerts is to filter by active secrets- these are secrets GitHub has confirmed are still valid and could be exploited. This allows security teams to focus on high-risk exposures that require immediate attention.

Sorting by time or filtering by custom patterns won't help with risk prioritization directly.

NEW QUESTION # 29

What do you need to do before you can define a custom pattern for a repository?

- A. Provide match requirements for the secret format. Stack Overflow
- B. Add a secret scanning custom pattern.
- C. Provide a regular expression for the format of your secret pattern.
- **D. Enable secret scanning on the repository.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

Before defining a custom pattern for secret scanning in a repository, you must enable secret scanning for that repository. Secret scanning must be active to utilize custom patterns, which allow you to define specific formats (using regular expressions) for secrets unique to your organization.

Once secret scanning is enabled, you can add custom patterns to detect and prevent the exposure of sensitive information tailored to your needs.

NEW QUESTION # 30

As a repository owner, you do not want to run a GitHub Actions workflow when changes are made to any .txt or markdown files. How would you adjust the event trigger for a pull request that targets the main branch?

(Each answer presents part of the solution. Choose three.)

- * on:
- * pull_request:
- * branches: [main]
- A. paths-ignore:
- B. paths:
- C. - '/*.*md'
- D. - '/*.*txt'
- E. - 'docs/*.*md'

Answer: A,C,D

Explanation:

To exclude .txt and .md files from triggering workflows on pull requests to the main branch:

* on: defines the event (e.g., pull_request)

* pull_request: is the trigger

* paths-ignore: is the key used to ignore file patterns

Example YAML:

yaml

CopyEdit

on:

pull_request:

branches:

- main

paths-ignore:

- '.*md'

- '.*txt'

Using paths: would include only specific files instead - not exclude. paths-ignore: is correct here.

NEW QUESTION # 31

.....

You can find that there are three versions of the GitHub-Advanced-Security training questions: the PDF, Software and APP online. As you have more time at home, you can use the Software version of GitHub-Advanced-Security exam materials. If you are a person who likes to take notes, you can choose the PDF version.
