Professional-Cloud-DevOps-Engineer Latest Test Prep - Dumps Professional-Cloud-DevOps-Engineer Cost

The Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) Desktop-based practice Exam is ideal for applicants who don't have access to the internet all the time. You can use this Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) simulation software without an active internet connection. This Professional-Cloud-DevOps-Engineer software runs only on Windows computers. Both practice tests of Itcertking

i.e. web-based and desktop are customizable, mimic Google Professional-Cloud-DevOps-Engineer real exam scenarios, provide results instantly, and help to overcome mistakes.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q122-Q127):

NEW QUESTION # 122

Your company is using HTTPS requests to trigger a public Cloud Run-hosted service accessible at the `https://booking-engine-abcdef.a.run.app` URL. You need to give developers the ability to test the latest revisions of the service before the service is exposed to customers. What should you do?

- A. Run `gcloud run services update-traffic booking-engine -to-revisions LATEST*!` command. Use the `https://booking-engine-abcdef.a.run.app` URL for testing.
- B. Run `gcloud run deploy booking-engine --no-traffic --ag dev` command. Use the `https://dev---booking-engine-abcdef.a.run.app` URL for testing.
- C. Grant the roles/run.invoker role to the developers testing the booking-engine service. Use the `https://booking-engine-abcdef.private.run.app` URL for testing.
- D. Pass the `curl -K "Authorization: Bearer $(gcloud auth print-identity-token)"` auth token. Use the `https://booking-engine-abcdef.a.run.app` URL to test privately.

Answer: A

NEW QUESTION # 123

You are running an application on Compute Engine and collecting logs through Stackdriver. You discover that some personally identifiable information (PII) is leaking into certain log entry fields. You want to prevent these fields from being written in new log entries as quickly as possible. What should you do?

- A. Wait for the application developers to patch the application, and then verify that the log entries are no longer exposing PII.
- B. Stage log entries to Cloud Storage, and then trigger a Cloud Function to remove the fields and write the entries to Stackdriver via the Stackdriver Logging API.
- C. Use the `filter-record-transformer` Fluentd filter plugin to remove the fields from the log entries in flight.
- D. Use the `fluent-plugin-record-reformer` Fluentd output plugin to remove the fields from the log entries in flight.

Answer: C

NEW QUESTION # 124

You are working with a government agency that requires you to archive application logs for seven years. You need to configure Stackdriver to export and store the logs while minimizing costs of storage. What should you do?

- A. Create a sink in Stackdriver, name it, create a bucket on Cloud Storage for storing archived logs, and then select the bucket as the log export destination.
- B. Create an export in Stackdriver and configure Cloud Pub/Sub to store logs in permanent storage for seven years.
- C. Develop an App Engine application that pulls the logs from Stackdriver and saves them in BigQuery.
- D. Create a Cloud Storage bucket and develop your application to send logs directly to the bucket.

Answer: A

NEW QUESTION # 125

You are running an application on Compute Engine and collecting logs through Stackdriver. You discover that some personally identifiable information (PII) is leaking into certain log entry fields. All PII entries begin with the text `userinfo`. You want to capture these log entries in a secure location for later review and prevent them from leaking to Stackdriver Logging. What should you do?

- A. Use a Fluentd filter plugin with the Stackdriver Agent to remove log entries containing `userinfo`, create an advanced log filter matching `userinfo`, and then configure a log export in the Stackdriver console with Cloud Storage as a sink.
- B. Use a Fluentd filter plugin with the Stackdriver Agent to remove log entries containing `userinfo`, and then copy the entries to a Cloud Storage bucket.
- C. Create a basic log filter matching `userinfo`, and then configure a log export in the Stackdriver console with Cloud Storage

as a sink.

- D. Create an advanced log filter matching userinfo, configure a log export in the Stackdriver console with Cloud Storage as a sink, and then configure a log exclusion with userinfo as a filter.

Answer: C

NEW QUESTION # 126

You are the Site Reliability Engineer responsible for managing your company's data services and products. You regularly navigate operational challenges, such as unpredictable data volume and high cost, with your company's data ingestion processes. You recently learned that a new data ingestion product will be developed in Google Cloud. You need to collaborate with the product development team to provide operational input on the new product. What should you do?

- A. When the initial product version passes the quality assurance phase and compliance assessments, deploy the product to a staging environment. Share error logs and performance metrics with the product development team.
- B. Deploy the prototype product in a test environment, run a load test, and share the results with the product development team.
- C. Review the design of the product with the product development team to provide feedback early in the design phase.
- D. When the new product is used by at least one internal customer in production, share error logs and monitoring metrics with the product development team.

Answer: C

NEW QUESTION # 127
