WGU Data Management – Foundations Exam Sample Questions (Q34-Q39):

NEW QUESTION #34

Which constraint propagates primary key changes to foreign keys?

- A. RESTRICT
- B. SET DEFAULT
- C. SET NULL
- D. CASCADE

Answer: D

Explanation:

The CASCADE constraint ensures that updates or deletions in the primary key table automatically reflect in the foreign key table. Example Usage:

sql

CREATE TABLE Departments (

DeptID INT PRIMARY KEY,

DeptName VARCHAR(50)

);

CREATE TABLE Employees (

EmpID INT PRIMARY KEY,

Name VARCHAR(50),

DeptID INT.

FOREIGN KEY (DeptID) REFERENCES Departments(DeptID) ON UPDATE CASCADE ON DELETE CASCADE);

- * If DeptIDchangesin Departments, itautomatically updatesin Employees.
- * If a DeptID is deleted, all employees in that departmentare also deleted.

Why Other Options Are Incorrect:

- * Option A (SET DEFAULT) (Incorrect): Sets foreign key values to adefault value, rather than propagating changes.
- * Option B (SET NULL) (Incorrect): When the referenced key is deleted, dependent records areset to NULLinstead of being updated/deleted.
- * Option C (RESTRICT) (Incorrect):Prevents deletion of a referenced row if dependent foreign key rows exist.

Thus, the correct answer is CASCADE, as it propagates primary key changes to dependent foreign keys.

NEW OUESTION #35

Which function removes only the leading spaces from a string?

- A. TRIM
- B. LEFT
- C. LTRIM
- D. REPLACE

Answer: C

Explanation:

The LTRIM() function in SQL removes leading spaces (spaces at the beginning of a string) while keeping spaces at the end. Example Usage:

sai

SELECT LTRIM(' Hello World') AS TrimmedText;

Output:

bash

'Hello World'

Why Other Options Are Incorrect:

* Option B (LEFT) (Incorrect):Used for extracting a portion of a string. Example:

sql

SELECT LEFT('Hello World', 5); -- Output: 'Hello'

* Option C (TRIM) (Incorrect):Removes both leading and trailing spaces, not just leading ones.

Example:

sql

SELECT TRIM(' Hello World'); -- Output: 'Hello World'

 \ast Option D (REPLACE) (Incorrect):Replaces occurrences of one substring with another but does not specifically remove spaces. Thus, the correct answer isLTRIM(), which removes onlyleading spaces.

NEW QUESTION #36

Which keyword determines if a value is within a range of values?

- A. OR
- B. BETWEEN
- C. LIKE
- D. IN

Answer: B

Explanation:

The BETWEEN keyword in SQL is used to filter values within a specified range. It is particularly useful for numeric and date-based queries.

Syntax of BETWEEN:

sql

SELECT * FROM Employees WHERE Salary BETWEEN 50000 AND 100000;

* Retrievesall employees whose salary is between \$50,000 and \$100,000 (inclusive).

Why Other Options Are Incorrect:

* Option A (LIKE) (Incorrect): Used forpattern matchingwith wildcards (%,). Example:

sql

SELECT * FROM Customers WHERE Name LIKE 'A%';

* Option B (IN) (Incorrect): Used tomatch a value in a specified set, butnot a range. Example:

gai

SELECT * FROM Employees WHERE Department IN ('HR', 'Finance', 'IT');

* Option C (OR) (Incorrect):Used forlogical conditions, but does not check a range. Example:

sql

SELECT * FROM Products WHERE Price < 10 OR Price > 50;

Thus, the correct choice is BETWEEN for filtering values within arange.

NEW QUESTION #37

Which primary key values consist of a single field only?

- A. Simple
- B. Meaningless
- C. Partition
- D. Stable

Answer: A

Explanation:

Asimple primary keyconsists of only one columnthat uniquely identifies each row in a table.

Example Usage:

sal

CREATE TABLE Students (

StudentID INT PRIMARY KEY,

Name VARCHAR(50)

);

* StudentIDis asimple primary keybecause it consists of only one field.

Why Other Options Are Incorrect:

- * Option B (Partition) (Incorrect):Refers topartitioned tables, which divide data for performance reasons butare not related to primary keys.
- * Option C (Stable) (Incorrect): This is not a recognized term in database keys.
- * Option D (Meaningless) (Incorrect):Primary keys are oftenmeaningless (e.g., auto-incremented IDs)
- , but this isnot a term used to describe their structure.

Thus, the correct answer is Simple, as a single-field primary key is referred to as a simple primary key.

NEW QUESTION #38

Which keyword can be used to combine two results into one table?

- A. MERGE
- B. CONSOLIDATE
- C. UNION
- D. INTEGRATE

Answer: C

Explanation:

The UNION keyword in SQL is used to combine the results of two or more SELECT queries into a single result set while removing duplicate rows.

Example:

sql

SELECT Name FROM Employees

UNION

SELECT Name FROM Managers;

- * Option A (Correct):UNION combines results from multiple queries into one set,removing duplicates.
- * Option B (Incorrect):MERGE is not a valid SQL keyword for combining result sets (it is used insome database systems for data merging).
- * Option C (Incorrect):INTEGRATE is not a SQL keyword.
- * Option D (Incorrect):CONSOLIDATE is not an SQL keyword.
