EMC Dell PowerFlex Implementation Achievement Sample Questions (Q13-Q18):

NEW QUESTION # 13

Place the PowerFlex implementation steps in the correct order.

The screenshot shows a quiz question interface. On the left, under the heading 'Steps', there is a list of five steps in a box: 'Prepare the environment.', 'Deploy the PowerFlex Management Controller', 'Perform post-installation tasks.', 'Deploy PowerFlex Manager Templates.', and 'Install PowerFlex Manager.'. To the right of this box is a 'Correct Order' section, which is currently empty. Below the steps box are two circular arrows, one pointing left and one pointing right. On the far right, there is a large 'DELL EMC' logo. A diagonal watermark 'pass4surecert.com' is visible across the center of the interface.

Answer:

Explanation:

The screenshot shows the correct order for the implementation steps. It features two columns. The left column, under the heading 'Steps', contains the same five steps as the previous screenshot: 'Prepare the environment.', 'Deploy the PowerFlex Management Controller', 'Perform post-installation tasks.', 'Deploy PowerFlex Manager Templates.', and 'Install PowerFlex Manager.'. The right column, under the heading 'Correct Order', shows the steps in their correct sequence: 'Prepare the environment.', 'Deploy the PowerFlex Management Controller', 'Deploy PowerFlex Manager Templates.', 'Install PowerFlex Manager.', and 'Perform post-installation tasks.'. Below the steps box are two circular arrows, one pointing left and one pointing right. On the far right, there is a large 'DELL EMC' logo. A diagonal watermark 'pass4surecert.com' is visible across the center of the interface.

Explanation:

The correct order for implementing PowerFlex is as follows:

- * Prepare the environment.
- * Ensure that hardware, networking, and software prerequisites are met.
- * Configure the required infrastructure, including switches and IP addresses.
- * Deploy the PowerFlex Management Controller.
- * Install and configure the Management Controller to serve as the central management hub.
- * Deploy PowerFlex Manager Templates.
- * Deploy necessary OVAs for PowerFlex Manager and configure the virtual machines.
- * Install PowerFlex Manager.
- * Install PowerFlex Manager for centralized lifecycle and cluster management.
- * Perform post-installation tasks.
- * Validate the setup, configure cluster policies, and enable features such as HA, DRS, and protection domains.

NEW QUESTION # 14

Which four prerequisites must be met before deploying PowerFlex on the Management Controller?
(Select 4)

- A. Install and configure ESXi on the Management Controller.
- B. Configure the switch ports.
- C. Configure VM HA and DRS.
- D. Set up hardware affinity.
- E. Deploy and configure the storage VMs.
- F. Deploy VMware vCenter.

Answer: A,B,E,F

Explanation:

Before deploying PowerFlex on the Management Controller, there are essential prerequisites to ensure a smooth and functional deployment:

* Deploy VMware vCenter (Option B):

* VMware vCenter is required to manage the ESXi hosts and VMs in the PowerFlex cluster. This ensures proper virtualization management and cluster configuration.

* vCenter also supports features like High Availability (HA) and Distributed Resource Scheduler (DRS), which are essential for PowerFlex operations.

* Install and Configure ESXi on the Management Controller (Option C):

* The Management Controller must have a functioning ESXi hypervisor to host the PowerFlex management components and virtual machines.

* ESXi installation ensures the virtualization layer is ready to manage PowerFlex VMs.

* Deploy and Configure the Storage VMs (Option D):

* PowerFlex storage nodes and VMs must be properly configured to enable storage pooling and service delivery.

* This includes ensuring the SDS (Storage Data Server) and MDM (Meta Data Manager) roles are assigned to VMs.

* Configure the Switch Ports (Option E):

* Network connectivity must be established by configuring switch ports to support proper communication between components.

* This step includes setting VLANs, MTU settings (jumbo frames), and ensuring link aggregation configurations are in place for redundancy and performance.

Why Not the Other Options?

* Option A: Set up hardware affinity: While hardware affinity is important for VM placement, it is not a prerequisite for deploying PowerFlex.

* Option F: Configure VM HA and DRS: These are typically configured after deployment and are not prerequisites for the initial setup.

NEW QUESTION # 15

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Resources
- B. Lifecycle
- C. Settings
- D. Protection

Answer: A

Explanation:

The Resources section in PowerFlex Manager is where administrators go to discover and manage physical and virtual infrastructure components, including switches:

* Resources Overview (Option A):

* The Resources area provides a centralized view of hardware and software components, including switches, nodes, and other devices.

* Discovery of switches involves scanning the network to identify switch configurations and integrate them into the PowerFlex environment for monitoring and management.

* Why Not the Other Options?

* Option B: Protection: This area focuses on data protection and backup solutions within PowerFlex, not hardware discovery.

- * Option C: Lifecycle: While Lifecycle helps manage the firmware and software updates, it does not handle hardware discovery tasks.
 - * Option D: Settings: The Settings section is used for configuring PowerFlex Manager itself, such as network settings and system options, not discovering switches.

NEW QUESTION # 16

Which three networks are configured during the PowerFlex implementation process? (Select 3)

- A. pfinc-vmotion
- B. pfinc-sdc-mgmt
- C. flex-node-data
- D. flex-node-mgmt
- E. pfinc-sds-mgmt

Answer: B,C,D

Explanation:

During the PowerFlex implementation process, the following networks are typically configured to ensure proper communication and functionality of the system:

- * flex-node-mgmt (Option A):
 - * This network handles the management traffic for PowerFlex nodes.
 - * It ensures communication between the nodes and the management interfaces.
- * pfinc-sdc-mgmt (Option B):
 - * This network is responsible for managing the communication between the Storage Data Client (SDC) and other PowerFlex components.
 - * It ensures proper data access and retrieval from the storage layer.
- * flex-node-data (Option E):
 - * The data network facilitates data transfer and communication between nodes in the PowerFlex cluster.
 - * This network is critical for high-speed data access and ensuring efficient storage operations.

Why Not the Other Options?

- * Option C: pfinc-sds-mgmt: While this may sound plausible, it is not a standard network configured during the implementation process.
- * Option D: pfinc-vmotion: vMotion is a VMware-specific feature for live migration of VMs and is not a primary PowerFlex network configuration.
