## Multiple Benefits Upon Buying ISA ISA-IEC-62443 Exam Dumps

Our ISA-IEC-62443 qualification test help improve your technical skills and more importantly, helping you build up confidence to fight for a bright future in tough working environment. Our professional experts devote plenty of time and energy to developing the ISA-IEC-62443 study tool. You can trust us and let us be your honest cooperator in your future development. Here are several advantages about our ISA-IEC-62443 Exam for your reference. We sincere suggest you to spare some time to have a glance over the following items on our web for our ISA-IEC-62443 exam questions.

## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q69-Q74):

### NEW QUESTION # 69

Which is a reason for and physical security regulations meeting a mixed resistance?  
Available Choices (select all choices that are correct)

- A. There are a limited number of enforced cybersecurity and physical security regulations.
- B. Regulations contain only informative elements.

- C. Cybersecurity risks can best be managed individually and in isolation.
- D. Regulations are voluntary documents.

**Answer: A**

Explanation:

Cybersecurity and physical security regulations are intended to provide guidance and requirements for protecting industrial control systems from various threats and risks. However, these regulations may face mixed resistance from different stakeholders for various reasons. One of the reasons is that there are a limited number of enforced cybersecurity and physical security regulations, especially at the international level. This means that some regions or countries may have more stringent or comprehensive regulations than others, creating inconsistencies and challenges for cross-border cooperation and compliance. Moreover, some regulations may be outdated or not aligned with the current best practices and standards, such as ISA/IEC 62443, which may limit their effectiveness and applicability. Therefore, some organizations may prefer to follow voluntary standards or frameworks, such as ISA/IEC 62443, rather than mandatory regulations, as they may offer more flexibility and adaptability to the specific needs and contexts of each industrial control system. **NEW QUESTION # 70**

What is defined as the hardware and software components of an IACS?

Available Choices (select all choices that are correct)

- A. Electronic security
- B. Cybersecurity
- C. COTS software and hardware
- D. Control system

**Answer: D**

**NEW QUESTION # 71**

Which protocol is commonly used for managing the security of message transmission on the Internet via web browsers?

- A. IPsec
- B. PPTP
- C. TLS
- D. L2TP

**Answer: C**

Explanation:

Transport Layer Security (TLS) is the primary cryptographic protocol used to secure web-based communications such as HTTPS in web browsers.

From ISA/IEC 62443-3-3 (System Security Requirements and Security Levels), Annex B:

"TLS provides confidentiality, integrity, and authentication for communications over untrusted networks. It is commonly used to secure HTTPS, SMTP, and other application protocols." TLS superseded SSL and is the backbone of secure data transmission over the Internet.

Incorrect Options:

B). L2TP - Used for VPNs; not typically browser-related.

C). PPTP - An older VPN protocol, not used for browser encryption.

D). IPsec - Used to secure IP traffic at the network layer; not directly used in browser-based communication.

**NEW QUESTION # 72**

How should patching be approached within an organization?

- A. As a purely technical task with no business implications

- B. By ignoring downtime and costs
- C. As part of the broader risk management strategy
- D. Only after a cyberattack has occurred

**Answer: C**

Explanation:

Patching in industrial environments must align with the broader risk management strategy due to the potential impact on system availability, safety, and compliance. According to ISA/IEC 62443-2-1, patch management is considered a part of operational security controls, and the standard emphasizes that patching decisions must be risk-informed.

"Patch management procedures shall consider the risk of system impact and ensure minimal disruption to IACS operation. The decision to apply patches must be based on risk assessments and business impact evaluations."

- ISA/IEC 62443-2-1:2010, Section 4.3.4.3

Additionally, ISA/IEC 62443-2-3 also supports the integration of patch management within the broader context of security maintenance planning.

**NEW QUESTION # 73**

In an IACS system, a typical security conduit consists of which of the following assets?

- A. Power lines, cabinet enclosures, and protective grounds
- B. Ferrous, thickwall, and threaded conduit including raceways
- C. Controllers, sensors, transmitters, and final control elements
- D. **Wiring, routers, switches, and network management devices**

**Answer: D**

Explanation:

In ISA/IEC 62443, a conduit is a logical or physical communication path used to connect security zones and is typically composed of:

Routers and switches

Network cabling (wiring)

Firewalls and network management devices

"A conduit is used to implement the flow of data between zones, and includes the communication hardware and associated logical controls such as firewalls, switches, and routers."

- ISA/IEC 62443-1-1:2007, Clause 3.3.44 - Conduit

This differs from physical electrical conduits, which are not a cybersecurity concept.
