

100% Pass Quiz 2025 High-quality Oracle Valid 1Z0-1072-25 Test Book

P.S. Free & New 1Z0-1072-25 dumps are available on Google Drive shared by ActualVCE: https://drive.google.com/open?id=1pkhpLr_2gatfTZlew52IfMMX7zI_-y4S

There are three formats of the 1Z0-1072-25 practice training material for your preparation. You can choose as your needs. The first one is the pdf files: 1Z0-1072-25 pdf dumps can be printed into papers which is very suitable for making notes. The 1Z0-1072-25 PC test engine & 1Z0-1072-25 online test engine are all VCE format and can simulate the actual test environment. The 1Z0-1072-25 PC test engine is suitable for any windows system, while the 1Z0-1072-25 online test engine can be installed on any electronic device. All the 1Z0-1072-25 exam content are the same and valid for different formats.

It is browser-based; therefore no need to install it, and you can start practicing for the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam by creating the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) practice test. Our Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam dumps give help to give you an idea about the actual Oracle 1Z0-1072-25 Exam. You can attempt multiple Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam questions on the software to improve your performance.

>> Valid 1Z0-1072-25 Test Book <<

Quiz 2025 Reliable Oracle 1Z0-1072-25: Valid Oracle Cloud Infrastructure

2025 Architect Associate Test Book

The web-based format gives results at the end of every Oracle 1Z0-1072-25 practice test attempt and points the mistakes so you can get rid of them before the final attempt. This online format of the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) practice exam works well with Android, Mac, Windows, iOS, and Linux operating systems.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q29-Q34):

NEW QUESTION # 29

Which compute capacity type would you select to meet these requirements?

- **A. On-demand capacity**
- B. Capacity reservation
- C. Dedicated host
- D. Preemptible capacity

Answer: A

Explanation:

On-demand capacity is the compute capacity type in Oracle Cloud Infrastructure (OCI) that allows you to provision and use compute instances whenever needed, without any long-term commitment. This flexibility is ideal for various workloads, including development, testing, and production environments, where immediate availability and scalability are crucial.

Key Points:

On-Demand Capacity: On-demand compute instances provide users with the flexibility to spin up instances as required and only pay for the time the instances are running. This model is most suitable for workloads with unpredictable usage patterns or short-term requirements.

Flexibility and Scalability: With on-demand capacity, you can quickly scale your resources up or down based on your application's needs, ensuring that you only pay for the resources you actually use.

No Commitment: Unlike reserved capacity, on-demand capacity does not require any long-term commitment or upfront payment, making it an attractive option for organizations looking to avoid capital expenditures.

Reference:

Oracle Cloud Infrastructure Documentation: OCI Compute Pricing

Oracle Cloud Infrastructure Documentation: Compute Instance Lifecycle

Explanation of Incorrect Options:

A . Capacity reservation: This option allows you to reserve capacity in advance, ensuring that resources are available when needed. It's ideal for predictable workloads but may not be as cost-effective for fluctuating demands.

B . Preemptible capacity: Preemptible instances are a lower-cost option where instances can be terminated by OCI if resources are needed elsewhere. This is suitable for non-critical workloads that can tolerate interruptions.

D . Dedicated host: Dedicated hosts provide physical servers for your exclusive use, offering isolation and predictable performance. This option is more suitable for workloads requiring dedicated resources or compliance needs.

Thus, Option C: On-demand capacity is the correct choice for most general-purpose workloads needing flexibility and immediate availability without long-term commitment.

NEW QUESTION # 30

How can an organization securely grant a third-party application access to specific OCI resources?

- A. By creating an IAM policy granting full access to the tenancy
- **B. By configuring the application to utilize Instance Principal**
- C. By sharing user credentials for an OCI administrator
- D. By implementing OAuth 2.0 with the application

Answer: B

Explanation:

To securely grant a third-party application access to specific Oracle Cloud Infrastructure (OCI) resources, the recommended approach is to configure the application to use Instance Principal. This method allows the application to authenticate directly with OCI services without needing to manage sensitive credentials like passwords or API keys.

Instance Principals: Enable compute instances to directly make API calls against OCI services, inheriting permissions through IAM

policies. This setup is more secure than sharing user credentials, as it avoids hardcoding credentials within the application and leverages OCI's native security features.

NEW QUESTION # 31

Which TWO statements are true about performing a multipart upload using the Multipart Upload API?

- A. Each part can be as large as 50 GiB.
- B. You can keep adding parts as long as the total number is less than 10,000.
- C. You do not need to split the object into parts.
- D. You do not have to commit the upload after uploading all parts.

Answer: A,B

Explanation:

When performing a multipart upload using the Multipart Upload API in Oracle Cloud Infrastructure (OCI) Object Storage, the following points are true:

C . Each part can be as large as 50 GiB: OCI allows each part of a multipart upload to be up to 50 GiB in size. This enables the efficient uploading of large objects in smaller, manageable parts.

D . You can keep adding parts as long as the total number is less than 10,000: The Multipart Upload API supports up to 10,000 parts for a single object. This allows the upload of very large objects by dividing them into multiple parts.

Incorrect Statements:

A . After uploading all parts, you must commit the upload to finalize the multipart upload and combine all parts into a single object.

B . The object must be split into parts before uploading when using the Multipart Upload API.

Oracle Cloud Infrastructure Documentation: Multipart Uploads

NEW QUESTION # 32

You want to protect your VM instance from low-level threats, such as rootkits and bootkits. What should you do?

- A. Use Vulnerability Scanning Service.
- B. Use in-transit encryption.
- C. Create a burstable instance.
- D. Create a shielded instance.

Answer: D

Explanation:

To protect your VM instance from low-level threats, such as rootkits and bootkits, you should create a shielded instance in Oracle Cloud Infrastructure (OCI). Shielded instances are designed to provide enhanced security features, including:

Secure Boot: Ensures that the instance boots only with trusted software.

Measured Boot: Records boot metrics, allowing verification that the instance has not been tampered with.

Trusted Platform Module (TPM): Provides additional security through cryptographic functions.

These features help protect against low-level threats that could compromise the integrity of the instance at boot time.

Oracle Cloud Infrastructure Documentation: Shielded Instances

NEW QUESTION # 33

Which is NOT a necessary step to complete this setup for instance principals?

- A. Generate Auth Tokens to enable instances in the dynamic group to authenticate with APIs.
- B. Create a policy granting permissions to the dynamic group to access services in your compartment or tenancy.
- C. Create a dynamic group with matching rules to specify which instances can make API calls against services.
- D. Deploy the application and the SDK to all the instances that belong to the dynamic group.

Answer: A

Explanation:

Instance principals in OCI allow compute instances to directly make API calls against OCI services without requiring a user account. To set up instance principals, the following steps are necessary:

- A . Deploy the application and SDK: The application running on the instances must use the OCI SDK or CLI to make API calls.
 - B . Create a dynamic group: Define a dynamic group with matching rules to identify which instances can use the API permissions.
 - C . Create a policy: Write an IAM policy that grants the dynamic group the necessary permissions to access services.
- Option D is NOT necessary because instances in a dynamic group use instance principals to authenticate and do not require Auth Tokens, which are used for user authentication with APIs.

NEW QUESTION # 34

.....

The first goal of our company is to help all people to pass the 1Z0-1072-25 exam and get the related certification in the shortest time. Through years of concentrated efforts of our excellent experts and professors, our company has compiled the best helpful and useful 1Z0-1072-25 test training materials, and in addition, we can assure to everyone that our 1Z0-1072-25 Study Materials have a higher quality than other study materials in the global market. The 1Z0-1072-25 learn prep from our company has helped thousands of people to pass the exam and get the related certification.
