The HPE0-S59 web-based practice exam requires no installation so you can start your preparation instantly right after you purchase. With thousands of satisfied customers around the globe, questions of the HPE Compute Solutions (HPE0-S59) exam dumps are real so you can pass the HP HPE0-S59 certification on the very first attempt. Hence, it reduces your chances of failure and you can save money and time as well.

HP HPE0-S59 Exam is a multiple-choice exam that consists of 60 questions. Candidates are given 90 minutes to complete the exam. HPE0-S59 exam is available in English and Japanese languages. The passing score for the exam is 65%, and the exam fee is \$200. Candidates can take the exam at Pearson VUE testing centers worldwide.

HPE Compute Solutions Sample Questions (Q20-Q25):

NEW QUESTION # 20

What is a limitation when creating a server profile?

- A. ILO management is limited to the integration with Active Directory or LDAP
- **B. It is not possible to create shared volumes on demand through a server profile**
- C. BIOS settings can be changed only when UEFI optimized is selected as boot mode
- D. Administrator cannot define more than 8 connections within a server profile

Answer: B

Explanation:

A limitation when creating a server profile in HPE OneView is that it is not possible to create shared volumes on demand directly through a server profile. Server profiles in HPE OneView are used to define and manage the configuration of compute nodes, including network connections, BIOS settings, and boot order, but they do not have the capability to dynamically create or manage shared storage volumes.

NEW QUESTION # 21

Your customer reports that an external FC boot volume for Windows server is visible four times in the Disk Management 1 online and 3 offline.

What should you do to resolve this issue?

- A. Remove the offline disks using Windows Disk Management
- **B. Install and configure MPIO on the Windows system**
- C. Disable deduplication for this volume at the array level
- D. Remove the offline disks using array management tools

Answer: B

Explanation:

The issue of a boot volume being visible multiple times in Windows Disk Management (with some disks being offline) is typically caused by multiple paths to the same storage device, especially in environments where multipath I/O (MPIO) is not configured. MPIO ensures that multiple paths to storage devices (such as an FC boot volume) are managed correctly and prevents issues like the volume being shown multiple times.

By installing and configuring MPIO, you ensure that Windows recognizes the multiple paths to the storage device as a single volume and handles them appropriately.

NEW QUESTION # 22

During a firmware update on an HPE server, the process fails, and the server becomes unresponsive. What is the recommended course of action?

- A. Replace the server's motherboard
- B. Wait for the update to complete
- **C. Contact HPE Support for assistance**
- D. Perform a hard shutdown and restart the update

Answer: C

NEW QUESTION # 23

Your customer plans to use HPE Primera to boot HPE Synergy compute nodes. They currently have two HPE Virtual Connect SE 100Gb F32 Module for Synergy modules installed in the frame. The customer wants to use FC as a storage access protocol. What must be done to complete this task?

- A. FC connectivity on the modules should be enabled through the service console by disabling FCoE.
- B. Add FC upgrade licenses in HPE OneView that will enable FC connectivity for the modules
- C. Enter both modules into a maintenance mode, then enable FC connectivity through CLI
- D. Enable FC primary and secondary boot on the modules through the HPE OneView interface

Answer: A

NEW QUESTION # 24

What is a limitation when creating a server profile?

- A. BIOS settings can be changed only when UEFI optimized is selected as boot mode
- B. ILO management is limited to the integration with Active Directory or LDAP
- C. It is not possible to create shared volumes on demand through a server profile
- D. Administrator cannot define more than 8 connections within a server profile

Answer: A

Explanation:

A limitation when creating a server profile in HPE OneView is that it is not possible to create shared volumes on demand directly through a server profile. Server profiles in HPE OneView are used to define and manage the configuration of compute nodes, including network connections, BIOS settings, and boot order, but they do not have the capability to dynamically create or manage shared storage volumes.
