Accurate JN0-253 Prep Material, New JN0-253 Dumps Sheet

If you want to success in your career as a Juniper Certified Professional, you must think outside the box. It would be beneficial if you considered adding Mist AI, Associate (JNCIA-MistAI) to your resume. To get this certification, you must pass the JN0-253 exam conducted by Juniper. Passing the Mist AI, Associate (JNCIA-MistAI) exam will help you advance your career. It is not an easy task to pass the Mist AI, Associate (JNCIA-MistAI) certification exam on the first attempt, but now PDFBraindumps is here to help. To assist you with remote study, PDFBraindumps provides Juniper JN0-253 Exam Questions to make your test preparation complete. The Juniper JN0-253 exam questions simulate the actual exam pattern, allowing you to pass the Mist AI, Associate (JNCIA-MistAI) certification exam the first time.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q11-Q16):

NEW QUESTION # 11

The Mist Site Insights Dashboard helps network administrators in which two ways? (Choose two.)

- A. It identifies when a monitored component of the network has crossed a defined threshold.
- B. It identifies issues affecting an end user's network experience displayed as a percentage of success.
- C. It displays information about the current WLANs.
- D. It displays when a bad event has been logged.

Answer: A,B

NEW QUESTION # 12

Which two statements are true about switch configurations at the site level? (Choose two.)

- A. Switch configurations at the site level are an additional way to apply a switch template to a specific site.
- B. Site-level switch configurations override org-level templates.
- C. Organizational-level templates override site-level switch configurations.
- D. Switch configurations at the site level are required to manually configure individual switches.

Answer: A,B

Explanation:

In the Juniper Mist Cloud architecture, configuration hierarchy and inheritance are key design principles for managing EX Series and QFX Series switches under Wired Assurance. Configuration settings can be applied at both the organization level and the site level, with clearly defined precedence rules.

According to the Juniper Mist Wired Assurance Configuration Guide, the organization level defines global configuration templates that apply across multiple sites, while the site level provides customization options specific to a particular location or environment.

The documentation states:

"Site-level configuration overrides any global or organizational template configurations for switches within that site." and further clarifies:

"Administrators can create or modify switch templates at the site level to apply custom settings to specific deployments without affecting other sites under the same organization." Thus:

* Statement C is correct - site-level configurations are an additional method to apply templates for a specific site.

* Statement D is correct - site-level configurations take precedence over org-level templates.

Statement A is incorrect because org-level templates do not override site-level configurations; the reverse is true.

Statement B is incorrect because site-level configuration is not required for manual switch setup - it is an optional, more efficient method of template application.

NEW QUESTION # 13

Which two statements correctly describe Mist organizations and sites? (Choose two.)

- A. Multiple organizations may be contained within a single site.
- B. Multiple sites may be contained within a single organization.
- C. A site is contained within an organization.
- D. An organization is contained within a site.

Answer: B,C

Explanation:

In the Mist architecture, an organization is a higher-level entity that can contain multiple sites.

A site is contained within an organization: Each site operates under the umbrella of an organization, allowing centralized management and policy enforcement.

Multiple sites may be contained within a single organization: This structure enables organizations to manage and monitor different geographical locations or different business units within a single centralized framework.

This hierarchical structure facilitates scalable and organized network management.

NEW QUESTION # 14

When viewing the LATEST UPDATES on the Marvis Actions page, you see an action labeled AI VALIDATED.

What does this status mean?

- A. The issue is resolved but was not manually marked resolved.
- B. The issue is unresolved.
- C. The issue was marked resolved by an administrator.

- **D. The issue was identified and resolved entirely by Marvis.**

Answer: D

Explanation:

In the Juniper Mist Marvis Actions dashboard, issues and recommendations are displayed with status labels indicating their progress and resolution method. One of these statuses is AI VALIDATED, which signifies that the issue was automatically detected, diagnosed, and resolved by Marvis AI without requiring manual intervention.

According to the Juniper Mist Marvis Virtual Network Assistant Operations Guide:

"AI VALIDATED indicates that Marvis has confirmed and resolved a network issue autonomously using AI-driven automation and telemetry correlation." This means Marvis performed the full troubleshooting cycle-identifying the anomaly, validating its cause, and confirming resolution-based on continuous monitoring and real-time network analytics.

Other statuses include:

- * UNRESOLVED: Issue is ongoing and needs attention.
- * RESOLVED: Marked manually by an administrator after resolution.
- * AI VALIDATED: Confirmed and closed automatically by Marvis AI.

Therefore, the correct answer is A. The issue was identified and resolved entirely by Marvis.

NEW QUESTION # 15

You are troubleshooting a wireless authentication problem.

Which two Mist features would help you in this scenario? (Choose two.)

- **A. packet capture**
- B. audit logs
- **C. client events**
- D. access point events

Answer: A,C

Explanation:

Packet Capture: This feature allows for detailed inspection of traffic at the packet level. Capturing packets can help identify issues with authentication protocols, such as misconfigured settings or failures in the authentication exchange process.

Client Events: Monitoring client events provides insights into the client's authentication attempts, including successes and failures. This data helps in pinpointing where in the process the failure occurs, whether at the client, access point, or authentication server.

NEW QUESTION # 16

.....

Experts at PDFBrainDumps strive to provide applicants with valid and updated Mist AI, Associate (JNCIA-MistAI) JN0-253 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the Juniper JN0-253 preparational material we provide and back it up with a money-back guarantee.
