C_TS422_2023 Exam Guide Materials - C_TS422_2023 Reliable Braindumps Files

Using our C_TS422_2023 practice engine may be the most important step for you to improve your strength. You know, like the butterfly effect, one of your choices may affect your life. And our C_TS422_2023 exam questions are definitely the exact effect that will change your life. In fact, our C_TS422_2023 Study Materials have been tested and proved to make it. Many of our customers gave our feedbacks to say that our C_TS422_2023 training guide helped them lead a better life and brighter future.

SAP S/4HANA Cloud Private Edition - Production Planning and

Manufacturing Sample Questions (Q50-Q55):

NEW QUESTION # 50

You Have a scheduling agreement with a vendor, you want classic MRP to automatically create schedule lines in case of material shortage, what must you do?

Note: there are 2 correct answers to this question.

- A. Set the creation indicator for delivery schedule lines on the initial screen the MRP run.
- B. Add the agreement to the quota arrangement and mark it for MRP relevance.
- C. Set the creation indicator for purchase requisition on the initial screen of the MRP run.
- D. Add the agreement to the source list and mark it for MRP relevance.

Answer: A,D

Explanation:

A scheduling agreement is a long-term agreement with a vendor for the supply of materials or services at predefined dates and quantities. To enable classic MRP to automatically create schedule lines in case of material shortage, you must do the following: Add the agreement to the source list and mark it for MRP relevance. The source list is a list of possible sources of supply for a material, such as vendors, contracts, or scheduling agreements. By adding the agreement to the source list and setting the MRP indicator, you specify that the agreement is a valid and preferred source of supply for the material.

Set the creation indicator for delivery schedule lines on the initial screen of the MRP run. The creation indicator determines whether the MRP run creates procurement proposals, such as purchase requisitions, planned orders, or delivery schedule lines. By setting the creation indicator for delivery schedule lines, you instruct the MRP run to create schedule lines for the scheduling agreement, based on the material requirements and the agreement conditions.

Adding the agreement to the quota arrangement and marking it for MRP relevance is not necessary, as the quota arrangement is used to distribute the total requirements of a material among several sources of supply. Setting the creation indicator for purchase requisition on the initial screen of the MRP run is not correct, as the purchase requisition is a different type of procurement proposal than the delivery schedule line.
