

100% Pass Quiz 2025 Nutanix NCP-DB: The Best Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Exam Material

P.S. Free & New NCP-DB dumps are available on Google Drive shared by PassExamDumps: <https://drive.google.com/open?id=1HbuZt1INfQYUVV6K5tL-gtZOHH4OZQSu>

Our team regularly modified it to provide you with the real and updated NCP-DB pdf exam questions every time. The applicants are informed of these new changes till three months after purchase from the PassExamDumps. The PassExamDumps gives its applicants a Nutanix NCP-DB web-based practice test software that doesn't require installation. Nutanix NCP-DB Practice Test is compatible with all operating systems, including iOS, Mac, and Windows. You can use this Nutanix NCP-DB practice test on any browser on any device anywhere. You need to sign in to a verified account on our website to use the entire premium Nutanix NCP-DB practice test questions.

PassExamDumps is a reliable study center providing you the valid and correct NCP-DB questions & answers for boosting up your success in the actual test. NCP-DB PDF file is the common version which many candidates often choose. If you are tired with the screen for study, you can print the NCP-DB Pdf Dumps into papers. With the pdf papers, you can write and make notes as you like, which is very convenient for memory. We can ensure you pass with NCP-DB study torrent at first time.

NCP-DB Test Braindumps: Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 & NCP-DB Exam Collection

In this highly competitive modern society, everyone needs to improve their knowledge level or ability through various methods so as to obtain a higher social status. Under this circumstance passing NCP-DB exam becomes a necessary way to improve oneself. And you are lucky to find us for we are the most popular vendor in this career and have a strong strength on providing the best NCP-DB Study Materials. And the price of our NCP-DB practice engine is quite reasonable.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q236-Q241):

NEW QUESTION # 236

When provisioning an PostgreSQL HA Instance, what are the minimum and maximum number of DB server VMs that can be deployed in a cluster?

- A. Min 1, Max 3
- B. Min 3, Max 5
- C. Min 2, Max 6

- D. Min 2, Max 4

Answer: D

Explanation:

When provisioning a PostgreSQL HA Instance using NDB, the minimum and maximum number of DB server VMs that can be deployed in a cluster are 2 and 4, respectively. A PostgreSQL HA Instance is a database instance that provides high availability and fault tolerance for PostgreSQL databases using the Patroni framework. Patroni is a Python-based tool that manages PostgreSQL configuration and performs automatic failover and switchover operations. Patroni relies on a distributed consensus store, such as etcd, Consul, or ZooKeeper, to store and synchronize the cluster state and leader information. NDB supports etcd as the consensus store for PostgreSQL HA Instances. NDB allows the administrator to provision PostgreSQL HA Instances with different sizes and configurations, such as small, medium, large, or custom. The size of the PostgreSQL HA Instance determines the number of DB server VMs, the number of etcd nodes, the CPU, memory, and disk resources, and the replication factor of the database. The minimum number of DB server VMs for a PostgreSQL HA Instance is 2, which corresponds to a small size instance. This configuration provides one leader and one follower DB server VM, and one etcd node. The maximum number of DB server VMs for a PostgreSQL HA Instance is 4, which corresponds to a large size instance. This configuration provides one leader and three follower DB server VMs, and three etcd nodes. The other options are not valid for a PostgreSQL HA Instance, as they either do not provide enough redundancy or exceed the supported limit of DB server VMs. References:

NEW QUESTION # 237

While adding Time Machine data access to a Nutanix cluster, when is a storage container mapping needed

- A. When the source database and NDB Server containers are different.
- B. When the source and destination database containers are different.
- C. When the source database and NDB provisioning container are the same.
- D. When the source database and NDB VM are on the same container.

Answer: A

Explanation:

Time Machine data access is a feature of Nutanix Database Service (NDB) that allows you to access a point-in-time snapshot of a database without restoring it. To use this feature, you need to create a Data Access Management (DAM) policy that defines the access mode, the source database, the destination cluster, and the storage container mapping. The storage container mapping is needed when the source database and the NDB Server containers are different, because NDB needs to know where to store the metadata and the clone of the source database. If the source database and the NDB Server containers are the same, then NDB will use the same container for both the metadata and the clone. References:

* Nutanix Certified Professional - Database Automation (NCP-DB), Section 5 - Protect NDB-managed Databases Using Time Machine

* Database (NCP-DB) Exam Blueprint Guide - Nutanix, Page 9, Objective 5.6

NEW QUESTION # 238

Why would an administrator want to publish a software profile update for Microsoft SQL Server that is created in NDB?

- A. When published, the software profile will deprecate older software profiles.
- B. Publishing the profile stalls the database software patching process.
- C. When published, all NDB users will be able to use that updated software profile to patch the database software on their VMs.
- D. Publishing the software profile update allows you to use that updated software profile to patch the database on the software profile.

Answer: C

Explanation:

In NDB, publishing a software profile update for Microsoft SQL Server makes it available for broader use within the NDB environment. When an administrator creates and publishes an updated software profile (e.g., with a new SQL Server patch or version), this action allows all authorized NDB users to leverage that profile to patch or update the database software on their managed VMs. This is a key feature of NDB's software profile management, enabling centralized control and distribution of standardized database configurations.

* Option A is correct because publishing a profile democratizes access, allowing all users to apply the update to their database VMs, aligning with NDB's collaborative administration model.

* Option B is incorrect because it suggests the profile patches itself, which is not the intent; publishing enables usage, not self-application.

* Option C is incorrect because publishing does not automatically deprecate older profiles; deprecation is a separate administrative decision.

* Option D is incorrect because publishing facilitates patching, not stalls it.

This process enhances efficiency and consistency in managing SQL Server updates across an organization.

NEW QUESTION # 239

Which two methods can be used to upgrade Era? (Choose two.)

- A. Nutanix LCM
- B. One-click Upgrade
- C. Rolling Upgrade
- D. Offline Upgrade

Answer: B,D

Explanation:

Nutanix Era can be upgraded using the Offline Upgrade and One-click Upgrade methods. The Offline Upgrade method involves manually downloading the software update and applying it to the Era instance. The One-click Upgrade method allows you to upgrade Era directly from the Era management console with a single click, provided that the Era instance has internet connectivity and can reach the Nutanix software update portal.

NEW QUESTION # 240

An administrator is interested in using profiles to simplify the database provisioning process. The profile needs to include information related to the SQL service startup account, and the NDB worker service account.

Which profile would help the administrator accomplish this task?

- A. Software
- B. Network
- C. Database Parameter
- D. Windows Domain

Answer: D

Explanation:

The correct answer is D because the Windows Domain profile is the profile that includes information related to the SQL service startup account and the NDB worker service account. A Windows Domain profile is a collection of settings that define how NDB manages Windows-based database servers and databases. It contains the following information:

* The domain name and credentials to join the database server VMs to the domain

* The SQL service startup account and password to run the SQL Server service on the database server VMs

* The NDB worker service account and password to run the NDB Database Agent service on the database server VMs

* The SQL Server authentication mode to use for the databases

By using a Windows Domain profile, the administrator can simplify the database provisioning process by applying the same settings to multiple database server VMs and databases, without having to manually enter them each time. The other options are not correct because they describe different types of profiles that do not include information related to the SQL service startup account and the NDB worker service account. Option B is not correct because the Network profile is a profile that defines the network settings for

the database server VMs, such as the IP address, subnet mask, gateway, DNS, and VLAN. Option C is not correct because the Database Parameter profile is a profile that defines the database parameters for the databases, such as the memory, CPU, storage, and performance settings. Option D is not correct because the Software profile is a profile that defines the software settings for the database server VMs and databases, such as the database engine version, edition, and features. NEW QUESTION # 241

.....

You can practice all the difficulties and hurdles which could be faced in an actual Nutanix exam. It also assists you in boosting confidence and reducing problem-solving time. The Pass4future designs NCP-DB desktop-based practice software for desktops, so you can install it from a website and then use it without an internet connection. You only need an internet connection to verify the license of the products. No other plugins are required to employ it.
