by hierarchy level
by logical column
It helps you to define an aggregate navigation
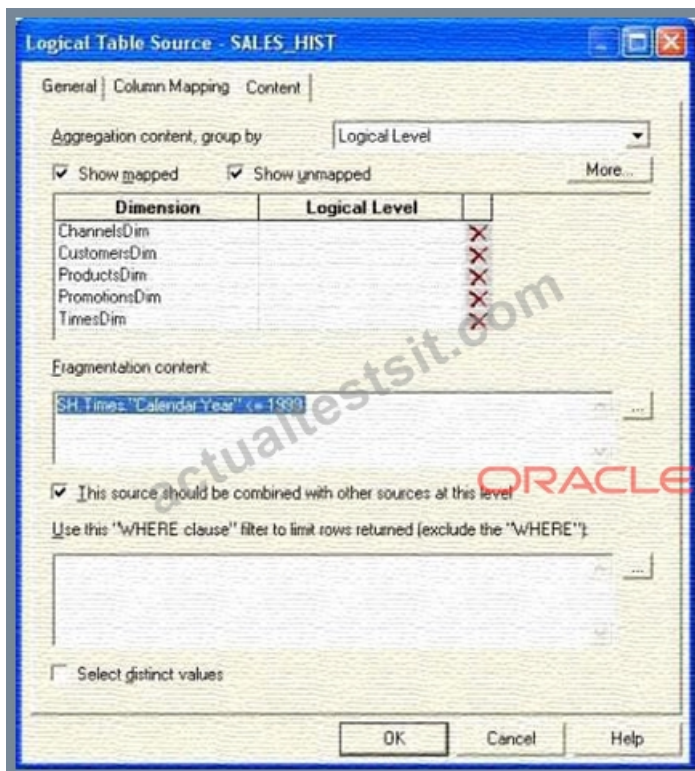

Note: logical table source

Logical table sources define the mappings from a single logical table to one or more physical tables. A logical table contains one or more logical table source. The mapping between physical columns and logical columns are done in this element.

The definition of the logical table source is used:

* to specify transformations/calculations (in the column mapping tab),

* to enable aggregate navigation and fragmentation (in the content tab) The Content tab of the Logical Table Source is used to define :

* any aggregate table content definitions (specify the grain of the physical tables),
